KCOR COMMENT BY berkey: Mon Sep 24 22:53:46 GMT 2018

In the Async MC4u gui (the one marked testing)

Added a check for ILX output status in the modulator tempature checking code. If the ILX is found to be off, the mc4u gui should now turn it back on. This should help keep us at the nonimal 35C and help recover from power outages quicker.

I also moved the async MC4u gui to be the default, in that it is the one that startups up automatically after a reboot.
