GENERAL OBSERVATORY COMMENT BY waters: Sun Mar 17 01:21:42 GMT 2019

We're starting to see a constant shake on the wind with the dec oscillating between -50 - 50 arcsec with the occasional jump to 100. Wind is at about 20-25mph due West. Idling K-Cor and closing the dome for now.

It seems Shabar froze at some point as the dome is closed and the reading on it hasn't changed. Closing it has popped up a message. Resetting VI: Shabar.vi message and now the GUI is now frozen trying to reopen it.
