GENERAL OBSERVATORY COMMENT BY waters: Mon Jul 1 21:42:32 GMT 2019

Shabar wasn't turning red for much higher seeing values (above 100 arcsec of seeing) but turned red just now for a value below 100 arcsec of seeing. Not too sure why it did that, since it was working fine all weekend.

____end____

GENERAL OBSERVATORY COMMENT BY waters: Mon Jul 1 21:47:33 GMT 2019

Cloud passing looks a little low, closing to dome just in case

____end____

GENERAL OBSERVATORY COMMENT BY waters: Mon Jul 1 21:59:02 GMT 2019

Something just started beeping; I'm not too sure what it is because it stopped before I could pinpoint it but I think it was the matrix UPS that has Kodiak, Hale and possibly the Nema boxes upstairs. It still has the '01 Battery Packs Need Replacement' message on it, so I'm not too sure.

GENERAL OBSERVATORY COMMENT BY waters: Tue Jul 2 03:53:18 GMT 2019

Unfortunately, no afternoon data. Aerosols were up early but weren't as bad as yesterday. However, clouds came up earlier and stayed for the whole afternoon.
