GPS COMMENT BY berkey: Sat Mar 14 19:25:57 GMT 2020

Cases GPS was not recording for the last 2 days.

Initial checks showed showed it was not a disk issues 9reads and writes to /mnt/usb were ok.

So the GPS software was restarted:

By killing sbcserver and restartign it with:

```
nohup sh /home/gps/sbcstartup.sh &> /home/gps/sbcstartup.out &
```

Once this was done the GPS data files appeared to be growing again.

GENERAL COMMENT BY waters: Sat Mar 14 23:04:13 GMT 2020

Updated the local phone list and printed it out as well as the current phone list from Boulder.

GENERAL COMMENT BY waters: Sat Mar 14 23:47:56 GMT 2020

Did an assessment of the tarps up stairs; the green/brown one seems to be flaking in a couple of places and is a bit small to cover our instruments. The blue one is much bigger and has some dust on it but looks good to use. Went down to the container to see if there were any other tarps in there and there are either two or three dark grey tarps right when you walk in. They look in good condition but I'm not sure if they are ours or NOAAs'.
