GENERAL COMMENT BY mcotter: Mon May 03 23:00:45 GMT 2021

Kcor now paused.

\_\_\_\_end\_\_\_\_

GENERAL COMMENT BY mcotter: Tue May 04 02:14:52 GMT 2021

The morning was decent enough to take data, though the sky was a little bright. Clouds began to move in around noon and then the weather continued to worsen through the afternoon. Now it is foggy with rain and drizzle.

GENERAL COMMENT BY mcotter: Tue May 04 02:22:29 GMT 2021

Worked on Ucomp for most of the afternoon. The hardware for the adjustable optic rail was showing signs of gouging when we attempted to make adjustment to the kinematic jacks, jam nuts and hold down socket head cap screws. We changed one of the kinematic jacks with a new one and applied a thin film of grease to the rest of the hardware to help prevent gouging. We left off by applying a penetrating oil to the socket head cap screws that bolt the optic bench to the spar. We were unable to continue with the alignment because the Sun became obscured by clouds. We will continue in the morning.
