GENERAL COMMENT BY lisapg: Wed Jul 20 15:37:11 GMT 2022

SGS was stuck trying to home, had to stop and restart it for it to stop and then home a gain. Seems to be okay for now; will see when we're on the Sun.

UCOMP COMMENT BY lisapg: Wed Jul 20 16:55:30 GMT 2022

Stopped UComp instrument as the coronal flats were not producing actual flats, there seems to be light coming through somehow as the images were not blank as normal. Stopped the instrument and went to center occulter and the diffuser is stuck in beam. Verified that the shutter was working and have shut down the program. Going to shut the computer down and power cycle stadia to see if that brings it back up.

UCOMP COMMENT BY lisapg: Wed Jul 20 17:28:14 GMT 2022

The shut down and power cycle seem to have worked; although the cameras were coming up. After power cycling the cameras, I got the error

Standa stage: Cal Pol Rot was not found. To continue running UCOMP with this stage in simulation mode press OK. If this is a real problem press cancel to QUIT now.

I canceled and restarted the computer again after verifying that nothing was pulled from the back when I shut down UComp computer. Computer came back up and everything is working again.
