UCOMP COMMENT BY embern: Fri Nov 11 02:06:20 GMT 2022

- 1) Removed UCOMP, modulator, Tcam, Tcam mount, field lens, and filter wheel
- 2) Added light source and collimator before Lyot filter
- 3) Added mount and fiber holder after Lyot filter. Had to saw off one end of the base plate for it to fit and have enough freedom to align.
- 4) Mounted spectrograph components to breadboard including new Owl camera and 1200 l/mm grating. Cables were strain relieved to baseplate.
- 5) Moved camera link extender next to spactrograph
- 6) Added new filters to filter wheel and re-ordered all filters following order of increasing wavelength
- 7) Mounted power supply for 50 W light source to spar
- 8) Darkened dome with trash bags.
- 9) Aligned all optics
- 10) Fixed bug in software
- 11) Started to obtain first data set
