Article format guide: World view

Please follow the below specifications when writing a World view article for *Nature Reviews*.

Manuscript file		
File types	☐	Preferred file format is Microsoft Word (.docx, .doc or .rtf), LaTeX submissions are allowed (please discuss with the editor first) but we cannot accept PDF.
Title	☐	Maximum 87 characters, including spaces. Abbreviations and punctuation should be avoided.
Author name and affiliations	☐	Only one author allowed: First name, middle initials (if applicable), last name; please check spelling. You may also include your name in non-Roman alphabets in parentheses after your name in English. For example, 'Mina Razzak (مينا رزاق)'. Currently supported languages are: Arabic, Chinese, Hebrew, Hindi, Japanese, Korean, Persian and Russian. Affiliation: Department, Institution, City, State/province (if applicable), Country/Region. Please check spelling. At the discretion of the editor, a consortium might be allowed. Please follow the consortium authorship guidelines.
Standfirst	☐	Standfirst of 50 words maximum, which should summarize the main point of the article and include a call for action.
Main text	☐	Please follow word count recommendations as discussed with the editor. Usually, articles are either around 650 words or around 1,300 words as the article will need to fit 1 or 2 pages in the PDF layout, respectively.
	☐	Only 1 level (max. 38 characters including spaces) of headings is allowed. Abbreviations should be avoided.
	☐	No references are allowed but important sources can be hyperlinked in the text.
Acknowledgements	☐	Optional. You can find our guidelines here.
Competing interests	☐	Include in manuscript file; you will also be asked to complete this information during submission. You can find our policy here.
Display items		
A headshot of the author or a logo of the consortium should be included. Note that we need permission of the copyright holder to use any photographs, which is usually the photographer. Photographs should be supplied in at least 300 dpi resolution at their final published size (31 mm width, 40-60 mm height). Ideally, photographic files will be in CMYK colour format rather than RGB. We support the following image formats: .jpeg, .tiff, .psd and .eps. No other display items are allowed.		

Title
Abbreviations and punctuation should be avoided.

Affiliations
Our preference is to minimize the number of affiliations per author where possible. Affiliations should be limited to primary addresses or those that must be cited for funding reasons. For consortia, please follow our consortia authorship guidelines. Additional affiliations and/or funding information can be added to the Acknowledgements section. Each address should be a separate affiliation. Springer Nature remains neutral with regard to jurisdictional claims in published maps and institutional affiliations.

Standfirst
Articles start with a standfirst, which should provide a short summary of the topic.

Headings
Headings can be used to subdivide text to help guide non-specialist readers.

Acknowledgements (optional)
The acknowledgement section can be used to thank anyone important in the publication of the work who does not qualify for authorship (Authorship criteria here) and to declare funders and grants if the publication is within the scope and directly arises from the grant. Please refer to the Acknowledgment guidance for more information.

Competing interests
In the interests of transparency, any competing interests must be declared both within the text of the article and via our web-based Manuscript Tracking System upon submission. A detailed explanation can be found in the *Nature* journals' policy on competing interests.

Authors can decline to disclose their competing interests if they are bound by confidentiality agreements, but we will publish the fact that they have declined to provide information. At the *Nature Reviews* journals, competing interests will be disclosed to referees and will be published online and/or in print.

File types
Please submit the text of your manuscript as a Microsoft Word file (.docx, .doc or .rtf) or LaTex file, but not as a PDF. We can accept figure files from the following software: Powerpoint, Illustrator (CS or earlier) and Photoshop, and Canvas if saved as EPSF or JPEG. Please provide native ChemDraw files (.cdx) for chemical structures.
