Several trees approximately two feet in diameter were blown down, some blocking streets. Several utility poles were either blown down or snapped off at their base. Numerous tree limbs and power lines were blown down. The roof of a house on Fourth Street was damaged when a chimney was blown down and fell onto the roof. The roof of another house on Fourth Street was damaged by a falling tree. A large tree was blown down near South Fifth and Locust.

The survey team reported a housing residence along Route 17 that had a shed completely destroyed, with the walls collapsed and the roof blown approximately 25 feet away. There was extensive hardwood tree damage for most of the damage path. Most of the trees damaged were either uprooted or snapped off at the base. These were large, mostly healthy trees. There were several trees where the break was a third to half of the way up the tree trunk. One of the housing structures along 7000W had a glass window blown out. An additional building had damage in the siding from a branch piercing the outer wall. Along 2000N, there were several occurrences of damage to man-made objects at several homesteads. The door on a large tin barn was blown into the structure and several panels of the siding collapsed. On the same property, a wooden corn shed was completely destroyed, and a house sustained shingle damage. A metal siding fence also blew down on the property line, as well as a chain link fence. Another property on 2000N incurred heavy structural damage due to fallen trees. Along the damage path, there were convergent wind patterns in several corn and wheat fields. In addition, the fallen trees laid in a convergent pattern. Many branches were speared into the ground in a convergent pattern, as well. The nature of this damage was consistent with an EF1 tornado with winds of 100 to 110 mph.
