Scholars GeoPortal - A step-by-step Tutorial -

Navigating the Portal

- Go to http://geo.scholarsportal.info
- 2. Zoom into the St. Catharines area using the zoom features located in the top left of the map window, or use the scroll wheel on the mouse.
- 3. Click n' drag to pan around the map.
- 4. Find your neighbourhood.
- 5. Select the **Base Maps** option in the top right of the screen and select a few different options to see the differences: imagery, street map. Light Gray.
- 6. Zoom out to full extent using the zoom out tool.
- 7. Select the ESRI World Street Map, and close the window.

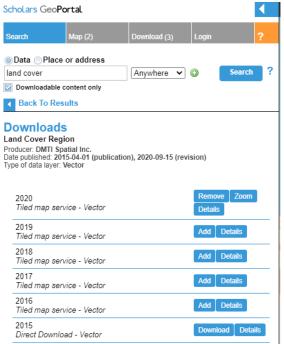

Base maps (Click here to Remove)

Search and View data

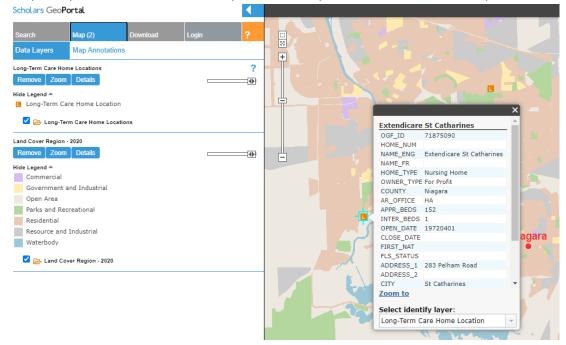

From the **Search** tab, several options are available: use a keyword to search data; or select a subject category from the *Browse by* list provided. A place or address search is also available.

- 1. Under the **Search** tab click the **Data** button.
- 2. Click the search box and enter land cover.
- 3. Click the **Search** button, and a list of results appears.
- 4. The **Details** button opens the *metadata* record a description of the data.
- 5. Scroll down the list to find the *Land Cover Region* layer, click **Add** and add the most recent data. (*A Conditions of Use agreement window will appear. It is important that you read and agree to these terms before the data can be added.) The land cover layer will be added to the map window.*
- 6. Zoom to a local area to view the detail.
- 7. Click the Back to Results button; then Back to Browse.
- 8. Select Human Health and Disease from the Browse by list and Add the layer describing Long Term Care Home Locations.

Preview Data

- 1. Click the Map tab. This lists the data layers, with legend, that were added to the map view.
- 2. Layers can be rearranged by click and drag.
- 3. Use the transparency slider to fade the *land use* layer. Streets and place names from the base map are now more visible.

Identify a map feature

- 1. Click a feature on the map to identify it.
- 2. Once the popup box appears, select the appropriate layer from the **Select Identify Layer** drop down. Information about the selected feature will appear.

View the Attribute Table

- 1. Click the **Data Table** tab from the map view menu bar at the top.
- 2. Select the layer and notice the columns of data associated with the layer. At the top of the table click

3. Close the table by clicking the X in the top right corner of the table.

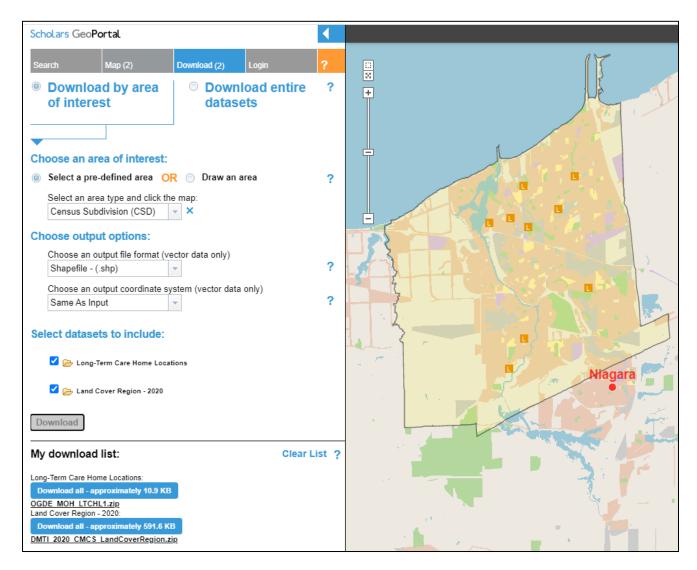

Download Data

Data layers for an area of interest can be downloaded in a number of file formats for use in a GIS software, such as ESRI ArcGIS.

To define the area of data extraction:

- 1. Zoom to the extent of St. Catharines, ON.
- Click the **Download** tab and select *Download by area of interest*.
- 3. Select the Select a pre-defined area button. (You may also draw an area of interest using the draw tools.)
- 4. From the dropdown list, choose Census Subdivision.
- In the map view, click on St. Catharines, the CSD becomes highlighted. Data within this area only will be extracted. 5.
- Under Choose an output file format, Shapefile (.shp) is default. This is the native format used for ArcGIS. 6.
- 7. Under Choose an output coordinate system, Same As Input is default. This is the format used when the data was created.
- Under **Select datasets to include**, make sure all desired layers are selected, or deselect those that are unwanted. 8.
- Click **Download** button and allow the program to extract the data (this may take several seconds).
- 10. The zip files per layer will appear in the My download list.

Export a Map

A map layout view can be exported in several file formats, jpg, pdf, etc. and includes a title, legend, scale, data source, etc.

Print

Export

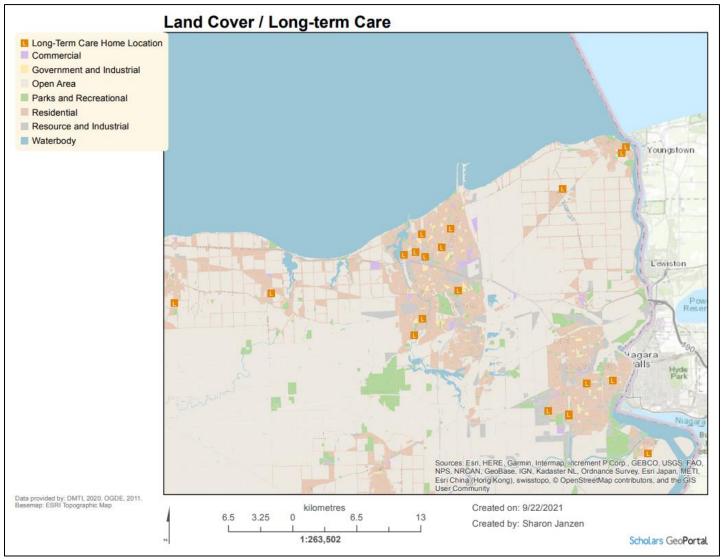

Data Table

Base Maps

Français

- 1. Click **Export** from the map view menu bar at the top. Save Share
- 2. Complete the Export window form and click Export. Note: A **Print** option is also available on the map view menu bar.
- 3. When processed, the file will appear in **My download list** and can be saved locally.

*Note that the exported map includes ALL layers in the map view regardless if they are checked or not. Remove unwanted layers using the Map tab.

Share a Map

A map view can also be shared using the **Share** link from the map view menu bar.

- Click Share and copy the url address (highlight and Ctrl-C) from the Link box (it could be lengthy).
- Paste (Ctrl-V) the url in an email, website, or make a link in a text document to share with others. The link will open the GeoPortal site and display the map view you created.
