## Package 'BinarybalancedCut'

January 20, 2025

Type Package
Version 0.2
Title Threshold Cut Point of Probability for a Binary Classifier Model
Date 2017-09-02
Author Navinkumar Nedunchezhian
Maintainer Navinkumar Nedunchezhian <navinkumar.nedunchezhian@gmail.com></navinkumar.nedunchezhian@gmail.com>
<ul> <li>Description Allows to view the optimal probability cut- off point at which the Sensitivity and Specificity meets and its a best way to minimize both Type- 1 and Type-2 error for a binary Classifier in determining the Probability threshold.</li> </ul>
License GPL-2
LazyData FALSE
Imports ggplot2,reshape2
Suggests knitr
NeedsCompilation no
Repository CRAN
Date/Publication 2017-09-02 17:27:38 UTC

Binary_threshold	This Supports the datascientist to determine the optimal threshold for
	binary classifier problem by visuallizing the sensitivity, specificity and
	accurarcy of the given model

#### Description

Prints 'Chart of sensitivity & specificity'.

#### Usage

Binary\_threshold(probability,class)

#### Arguments

probability	Probability Obtained from the model
class	Actual Class of the datasets

#### Examples

```
set.seed(100);disease <- sample(c("yes","no"), 1000, replace=TRUE);
Probabilities<-sample(seq(0,1,by=0.01),1000,replace=TRUE);
Binary_threshold(Probabilities,disease)</pre>
```
