**RE:** Pedestrian & Bicycle  
Collisions with Motor  
Vehicles in Anchorage:  
1998-2002 Report

To Whom It May Concern:

The Department of Transportation and Public Facilities (DOT/PF) has recently completed our study of pedestrian and bicycle related accidents in Anchorage. A copy of the final report is enclosed.

This report was developed as part of the annual Highway Safety Improvement Program (HSIP) and summarizes accidents between pedestrian or bicycles and motor vehicles in the Anchorage area. Part I documents accident locations, trends, environmental and human factors, alcohol involvement, age, roadway traffic control devices, etc.

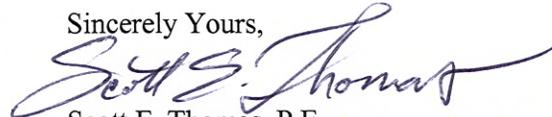

Part II involved an interagency approach to review the data, address the issues raised, and develop strategies for mitigating pedestrian and bicycle related accidents in Anchorage. Key public agency staffers who routinely work together participated:

Alaska DOT/PF (DOT)	Municipality of Anchorage Traffic Department (MOA)
People Mover	Alaska Injury Prevention Center (AIPC)
Anchorage Police Department (APD)	Anchorage School District (ASD)
Alaska Highway Safety Office (AHSO)	Alaska State Troopers (AST)

These Education, Enforcement, and Engineering. strategies are offered as recommendations to be incorporated into the planning, design and operation of pedestrian & bicycle facilities as appropriate. They do not mandate the use of specific strategies.

Contact Ron Martindale, Central Region HSIP Coordinator, at 269-0643 if you have any questions.

Sincerely Yours,

Scott E. Thomas, P.E.  
Regional Traffic Engineer

## NOTICE TO USERS

The following report was developed as part of the annual Highway Safety Improvement Program (HSIP). It summarizes accidents between pedestrian or bicycles and motor vehicles in the Anchorage area and offers possible strategies for reducing these accidents by targeting specific accident patterns and behaviors, taking into account enforcement issues, educational opportunities and available engineering solutions.

*These strategies are offered as recommendations to be incorporated into the planning, design and operation of pedestrian & bicycle facilities as appropriate. They do not mandate the use of specific strategies.*

### Appendix F: Listing of Pedestrian and Bicycle Related Projects by DOT/PF, 2001-2007

# **Pedestrian and Bicycle Collisions with Motor Vehicles in Anchorage: 1998-2002 (2003 Statistics shown in RED)**

## **Executive Summary**

The following report was developed as part of the annual Highway Safety Improvement Program (HSIP) and summarizes accidents between pedestrian or bicycles and motor vehicles in the Anchorage area. Part I documents accident locations, trends, environmental and human factors, alcohol involvement, age, roadway traffic control devices, etc. Part II involved an interagency approach to review the data, address the issues raised, and develop strategies for mitigating pedestrian and bicycle related accidents in Anchorage. *These strategies are offered as recommendations to be incorporated into the planning, design and operation of pedestrian & bicycle facilities as appropriate. They do not mandate the use of specific strategies.*

Major findings of this study discussed in **Part I** include:

- ❑ **Accidents between motor vehicles and pedestrians or bicycles are much more likely to result in injury or death than accidents between motor vehicles.**

In Anchorage, over 85% (77.35%) of pedestrian or bicycle accidents result in injury with nearly 3% (1.71%) resulting in a death. By contrast, just over 30% of ALL recorded accidents in the State during the same time period resulted in injury, with 0.54% resulting in a death.

- ❑ **Fatal pedestrian accidents tend to happen more frequently during winter months.**

18 out of 30, or 60% of pedestrian fatalities occurred between November-March. By contrast, most bicycle related accidents resulting in major injury (38 out of 50 or 76%) occur during the April-November time period.

- ❑ **Pedestrian related accidents occur throughout the year while bicycle related accidents occur much more frequently during the summer months.**

Pedestrian accidents average 38 per month with a high of 55 in November and a low of 28 in May. Bicycle related accidents average 53 per month but occur, as one would expect, much more frequently during the summer months. Of the 636 bicycle related accidents in Anchorage between 1998-2002, 554 or over 87% occur between May and September.

- ❑ **Pedestrian and bicycle related accidents are much more likely to occur during DAYLIGHT ambient light conditions than accidents as a whole.**

Nearly 75% (75.3%) of pedestrian/bicycle related accidents in Anchorage occurred during DAYLIGHT ambient light conditions. By contrast, just over 52% of ALL recorded accidents in the State during the same time period occurred in DAYLIGHT ambient light conditions.

- ❑ **Pedestrian and bicycle related accidents are nearly twice as likely to occur during DRY roadway surface conditions than accidents as a whole.**

Nearly 71% (76.3%) of pedestrian/bicycle accidents in Anchorage occurred during DRY roadway surface conditions. By contrast, just over 35% of ALL recorded accidents in the State during the same time period occurred in DRY roadway surface conditions. However, pedestrian/bicycle related accidents are more likely to occur during WET roadway surface conditions (13.3%) (11.4%) than accidents as a whole (9.8%).

- ❑ **Alcohol involvement in pedestrian and bicycle related accidents as it relates to accident severity are similar to that of accidents in Anchorage as a whole.**

Alcohol was a factor in approximately 52% of fatal pedestrian/bicycle related accidents and approximately 56% of ALL fatal accidents in Anchorage. (2 of 5 in 2003) However, nearly twice as many pedestrian and bicycle related accidents involved alcohol than accidents as a whole in Anchorage. (15.8% verses 7.0%).

- ❑ **In pedestrian and bicycle related accidents where alcohol was a factor, the pedestrian or bicyclist was the one under the influence of alcohol in over 70% of these accidents.**

The pedestrian was under the influence in 50% (66.7%) of the alcohol related accidents, the bicyclist was under the influence in 23% (15.2%) of these accidents, and the driver of the motor vehicle was under the influence in 27% of these accidents. Both the pedestrian or bicyclist and the motor vehicle operator were under the influence in 9 of these accidents.

- ❑ **The top 5 roadways in Anchorage for the TOTAL number of pedestrian and bicycle related accidents are Northern Lights Boulevard, Lake Otis Parkway, Tudor Road, Spenard Road and Minnesota Drive. (2003, Northern Lights Boulevard, Lake Otis Parkway, Tudor Road, C Street, and Benson Boulevard)**

These roadways represent 4 of the top six roadways in Anchorage in terms of traffic volumes for roadways with significant pedestrian and bicycle accidents. Northern Lights Boulevard had the highest number of pedestrian and bicycle related accidents in Anchorage between 1998-2002 with a total of 83 or 10.95 accidents/mile. Others in the top 5 included Lake Otis Parkway with 59 accidents or 8.51 accidents/mile, Tudor Road with 57 accidents or 11.29 accidents/mile, Spenard Road with 43 accidents or 14.15 accidents/mile, and Minnesota Drive with 41 accidents or 5.59 accidents/mile.

- ❑ **The top 5 roadways in Anchorage for the number of pedestrian and bicycle related accidents per MILE (accident concentrations) are 6<sup>th</sup> Avenue, Benson Boulevard, Gambell Street, Ingra Street and 5<sup>th</sup> Avenue. (2003, Gambell Street, Benson Blvd., C Street, Arctic Blvd. And 5<sup>th</sup> Avenue.)**

Four of the 5 roadways in the top five are located on two downtown couplets, 5th Avenue/6th Avenue and Gambell Street/Ingra Street. The remaining route is Benson Boulevard in Midtown, ½ of the Northern Lights/Benson Boulevard couplet. 6<sup>th</sup> Avenue had an average of 22.92 accidents/mile or a total of 25, followed by Benson Boulevard with 20.71 accidents/mile (35 total), Gambell Street with 17.82 accidents/mile (18 total), Ingra Street with 15.55 accidents/mile (17 total) and 5<sup>th</sup> Avenue with 14.80 accidents/mile (33 total).

- ❑ **The top 5 intersections in Anchorage for the TOTAL number of pedestrian and bicycle related accidents are:**

- |  |   |
|--|---|
| 1. Northern Lights Boulevard @ Spenard Road (14),  | Northern Lights @ Seward Hwy. (4)           |
| 2. Minnesota Drive @ Spenard Road (11),            | Tudor Road @ Denali St., (4)                |
| 3. Tudor Road @ Lake Otis Parkway (11),            | Lake Otis Pkwy. @ 42 <sup>nd</sup> Ave. (4) |
| 4. Muldoon Road @ Debarr Road (10), and            | A Street @ Benson Blvd. (4)                 |
| 5. Seward Highway @ Northern Lights Boulevard (10) | Eight other intersections (3 each)          |

- ❑ **The top 5 intersections in Anchorage for the RATE of pedestrian and bicycle related accidents are:**

1. 16<sup>th</sup> Avenue @ Eagle Street (0.514 or 3 total),
2. Mt. View Drive @ Price Street (0.254 or 7 total),
3. 3<sup>rd</sup> Avenue @ Karluk Street (0.231 or 4 total),
4. Northern Lights Boulevard @ Spenard Road (0.224 or 14 total), and
5. 4<sup>th</sup> Avenue @ D Street (0.198 or 3 total).

One intersection, Northern Lights Boulevard @ Spenard Road, appears in the top 5 intersections on both the NUMBER of ACCIDENTS and ACCIDENT RATE listings.

- ❑ **The highest percentage of pedestrians and bicyclists involved in accidents with motor vehicles is in the under 21 age group.**

Pedestrians and bicyclists under the age of 21 involved in collisions with motor vehicles represent 36.1% (33.1%) of the total pedestrian and bicycle related accidents in Anchorage between 1998-2002. Over 25% of these were 15 or younger. Pedestrians and bicyclists in the 21-30, 31-40 and 41-50 age groups accounted for 13.8%, 14.4%, and 15.3% respectively. The remaining 20.4% are either over 50 or the age was unknown.

- ❑ **Routes with the most fatalities include Northern Lights Boulevard with 4 (2 are at the Seward Highway), Bragaw Street with 3 (2 are at the Glenn Highway), Spenard Road with 3, and Fireweed Lane with 3.**

- ❑ **The highest number of citations issued in connection with pedestrian & bicycle related accidents were:**

1. **Failure to Yield (133),** 25.96%
2. **Bicycle Moving Violation (116),** 16.35%
3. **Improper Walking on Roadway, Failure to Yield in or out of Crosswalk, and Pedestrian Violation (61)** (7, 6.73%)

- ❑ **Approximately 35% (34.5%) of all pedestrian and bicycle related accidents occurred at locations with a traffic signal. Another 18.7% (19.9%) occurred at STOP controlled intersections. Over 41% (34.8%) occurred at locations with no traffic control devices.**

Strategies for addressing pedestrian & bicycle accidents in Anchorage discussed in Part II include:

- ❑ **An Interagency Strategy Meeting was held on July 21-22, 2005 to review the scope and extent of pedestrian and bicycle related collisions with motor vehicles in Anchorage.**

Key public agency staffers from Alaska DOT/PF, the Municipality of Anchorage Traffic Department, People Mover, Alaska Injury Prevention Center, Anchorage Police Department, the Anchorage School District, the Alaska Highway Safety Office and the Alaska State Troopers participated in the meeting.

- ❑ **General findings of this group included:**

- There are approximately 220 pedestrian & bicycle related accident reports each year in Anchorage.
- A focused study to access specific pedestrian and bicycle related accident data is required to distinguish them from the much larger vehicle accident data.
- Alaska has a higher number of bike related accidents (58%) than pedestrian related accidents (42%) & leads the country in bicycle fatality rate, despite short bicycling seasons.
- There are significant pedestrian accidents in midtown and downtown
- There is a higher risk of injury & fatality with pedestrian & bicycle accidents than other accident types.
- Right angle accidents with turning vehicles are a number one pattern.
- Alcohol involvement is a big factor, particularly in fatal pedestrian and bicycle related accidents.
- School related pedestrian & bicycle accidents not a significant problem in Anchorage.
- Jaywalking, mid-block Crossing and nonconformance with the rules of the road were a major observation.
- The design of arterial bike routes is a concern at signalized intersections due to curb cut locations.
- The MOA Parks and Recreation Department is preparing an Anchorage Pedestrian & Bicycle Program.

- ❑ **Pedestrian and bicycle accident rates and averages are only one measure of the frequency of these types of accidents per population.**

Exposure (the amount of pedestrian, bicycle and motor vehicle traffic in a particular area) and usage lead to problem areas. However, exposure is not easily measured as it changes from day to day and season to season. Other areas may be of similar conflict or risk, but not high statistically due to low usage & exposure.

- ❑ **While Alaska has an average accident rate between pedestrians and vehicles as compared to other states, our bicycle-vehicle accident rate is the highest in the United States, up to 3 to 4 times most other states, even with a shorter biking season for most users. From over 1,000 accidents in five years, the top three most identifiable patterns were:**

- Angle collisions between sidestreet turning motorists and bicyclists on the crossroad, especially right turns versus right side cyclists, at both signalized and unsignalized intersections.
- Pedestrian collisions mid-block, either close to nearby intersections or far enough away from these intersection opportunities that additional controls may be needed to assist the crossing maneuver.
- Alcohol involvement on the part of the motorized or nonmotorized user in the most serious accidents.

- ❑ **Observations made by agency staffers confirmed that Rules of the Road conflicts & near misses between motorized & nonmotorized users were a frequent occurrence & were the fault of both parties.**

- ❑ **Effective mitigation for pedestrian and bicycle related accidents must be through a balanced top down approach through Education, Enforcement, and Engineering. (The 3 E's)**

AMATS leaders are encouraged to unify & coordinate planning for this approach through an umbrella program. Similar programs have been developed in many cities, commonly called *Street Smarts*. The three E's are managed as a coordinated plan focused on bringing all disciplines together on the same problems.

- ❑ **While there are a multitude of strategies and resources available, only a smaller portion appears to be able to make a significant and lasting impact.**

Strategies need to be coordinated into targeting the top identifiable accident patterns and behaviors leading to those patterns. Targeting too many patterns and behaviors could lessen the effectiveness of the strategies.

- ❑ **Anchorage has already embarked upon a proposed Anchorage Pedestrian Plan whose purpose is "To establish a framework for improvements that will enhance the pedestrian environment and increase opportunities to choose walking as a safe mode of transportation."**

### **Education, Enforcement & Engineering Recommended Strategies**

- ❑ **Educational tools should identify the specific problems found in Anchorage including specific accident patterns, fault, (either the bicyclist, the pedestrian the motorist or some combination), the age group most frequently involved, and high accident locations. Strategies could include:**

- Pedestrian and Bicycle Safety Brochures & Posters with bike riding & pedestrian walking tips.
- Public Service Announcement(s) Bicycle, pedestrian and motor vehicle operator tips.
- Web Site(s) for Pedestrian and Bicycling Safety
- Print Ads for pedestrian/Bicycle Safety

□ **The following enforcement strategies were identified during the two-day interagency strategy meeting:**

- Warning Tickets for Pedestrians and Bicyclists
- Construction of Enforcement Locations
- Review Magistrate actions relating to enforcement
- Alaska Traffic Manual Changes
- Officer Training for preparing pedestrian & bicycle related accident reports
- Accident Reporting of Non Vehicle Related Pedestrian & Bike Accidents
- Regulations Needs
- Red Light Enforcement Cameras

□ **The following engineering mitigation strategies/countermeasures were identified:**

- Advance Pedestrian Signal Phases
- Raised Refuge Islands and Pork Chop Islands
- Restrictive Median Treatments
- Transit Stop Locations Devices
- Confirmation Bulbs at Traffic Signals
- Intersection Sight Triangles
- Advance STOP Bars
- Expanded use of Bike Lanes
- Pedestrian Lighting
- Countdown Pedestrian Signal Timers
- Restrict Right Turn on Red
- Contrasting Crosswalks
- Animated Eyes Active Crossing
- Passive LOOK displays on sidewalks.
- Pedestrian/Bicycle Only Traffic Signals
- Embedded Crosswalk Lights
- Curb Ramp Design Modifications
- Pedestrian/Bicycle Facility Grade Separations from Vehicles

□ **Traffic Data Needs were identified including:**

- Access to other traffic data sources beyond the accident data maintained by the Department including the trauma registry and/or hospital emergency room data.
- A method is needed for gathering data for pedestrian and bicycle related accidents that occur at locations other than the roadway such as separated pathways. (i.e. Coastal Trail, Chester Creek Greenbelt Trail, Campbell Creek Greenbelt Trail..)
- The installation of GPS equipment in police cars is needed to improve the accuracy of reported accidents involving pedestrians or bicyclists.

□ **Funding Sources for the 3 E's were identified and may include:**

- Highway Safety Improvement Program (HSIP) Funds (Mostly for "Engineering" component.)
- Alaska Highway Safety Office (Enforcement or Education components), Section 402 Grant requests, and Section 154 \$4 million for DUI enforcement.
- MOA, Community Service Patrol – for on street pedestrian drinking related problems, issues.
- National Highway Traffic Safety Administration (NHTSA) Funding (Not otherwise identified)
- Local Municipality of Anchorage (MOA) Funding (AMATS allocation, Bond Funds, etc.)

# Part I: Pedestrian & Bicycle Accidents in Anchorage: 1998-2002

## Data Collection and Analysis

### Introduction

The following report was developed as part of the annual Highway Safety Improvement Program (HSIP) and summarizes accidents between pedestrian or bicycles and motor vehicles in the Anchorage area. Part I documents accident locations, trends, environmental and human factors, alcohol involvement, age, roadway traffic control devices, etc.

Pedestrian and bicycle related accidents with motor vehicles are a major concern as the severity of these types of accidents is generally higher than other types of accidents. These types of accidents, particularly when they result in a fatality, generate considerable emotion in the community and calls for improvements in the transportation infrastructure to better accommodate pedestrians and bicycle riders.

To help address pedestrian and bicycle related accidents with motor vehicles in a more comprehensive way, the Central Region Traffic & Safety Section has undertaken a study whose purpose is to document accident locations, trends, environmental and human factors, alcohol involvement, age, roadway traffic control devices, etc. In order to establish a sufficient database for data analysis and screening, the latest 5 years of pedestrian and bicycle related accident data was used.

### Study Parameters

Pedestrian and bicycle related accidents in the Central Region between 1998 and 2002 were collected from the Highway Analysis System (HAS) database and imported into an Excel spreadsheet for examination. Results of this analysis are outlined below.

### Results of Accident Data Analysis

The following tables summarize the results of pedestrian and bicycle related accident data analysis. Pedestrian and bicycle related accidents were reviewed and tables prepared discussing accident trends and circumstances including:

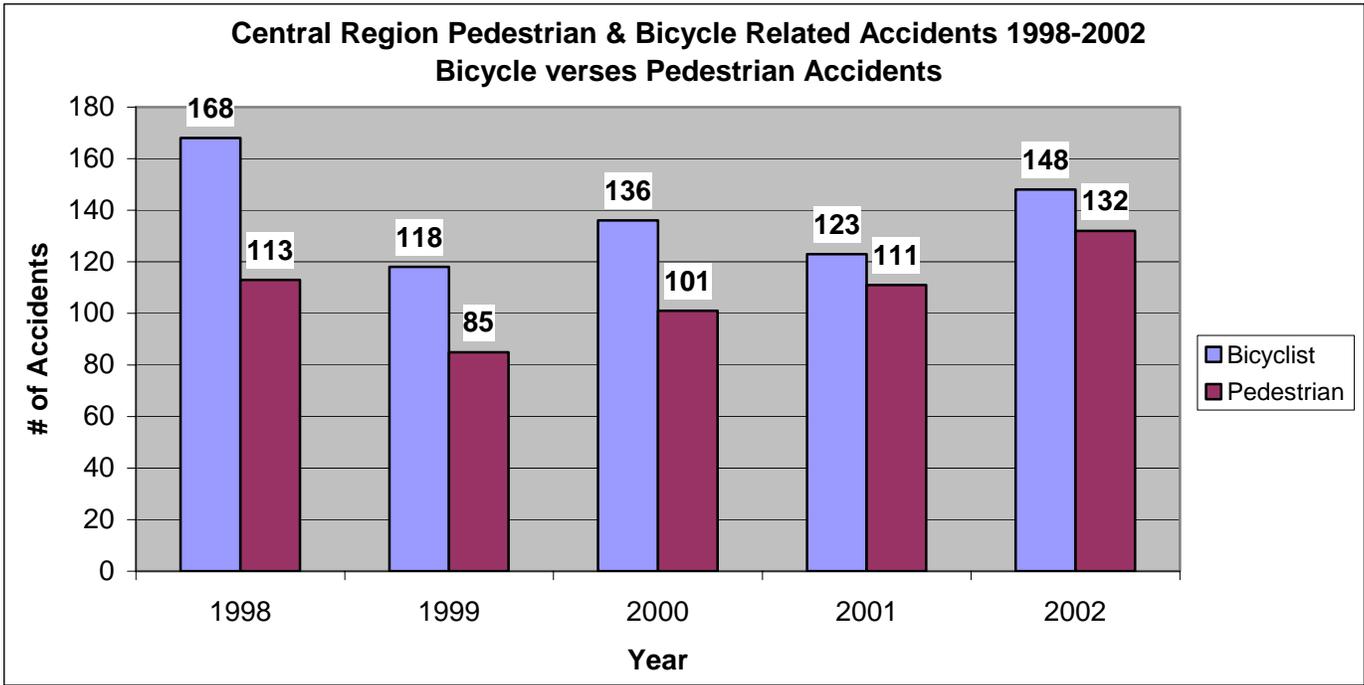

- Pedestrian and bicycle related accidents by year
- Accident severity
- Ambient lighting conditions
- Roadway surface conditions
- Alcohol involvement
- Corridors and intersections in Anchorage with the highest number and rate of pedestrian and bicycle related accidents
- Ages of pedestrians and bicycle riders involved in accidents with motor vehicles
- Locations of FATAL pedestrian and bicycle related accidents
- Citations issues in connection with pedestrian and bicycle related accidents
- Traffic control devices present at accident location
- Vehicle and pedestrian actions just prior to accident

Details of these trends and circumstances are discussed below.

### Pedestrian and Bicycle Accidents by Year for REGION and ANCHORAGE: 1998-2002

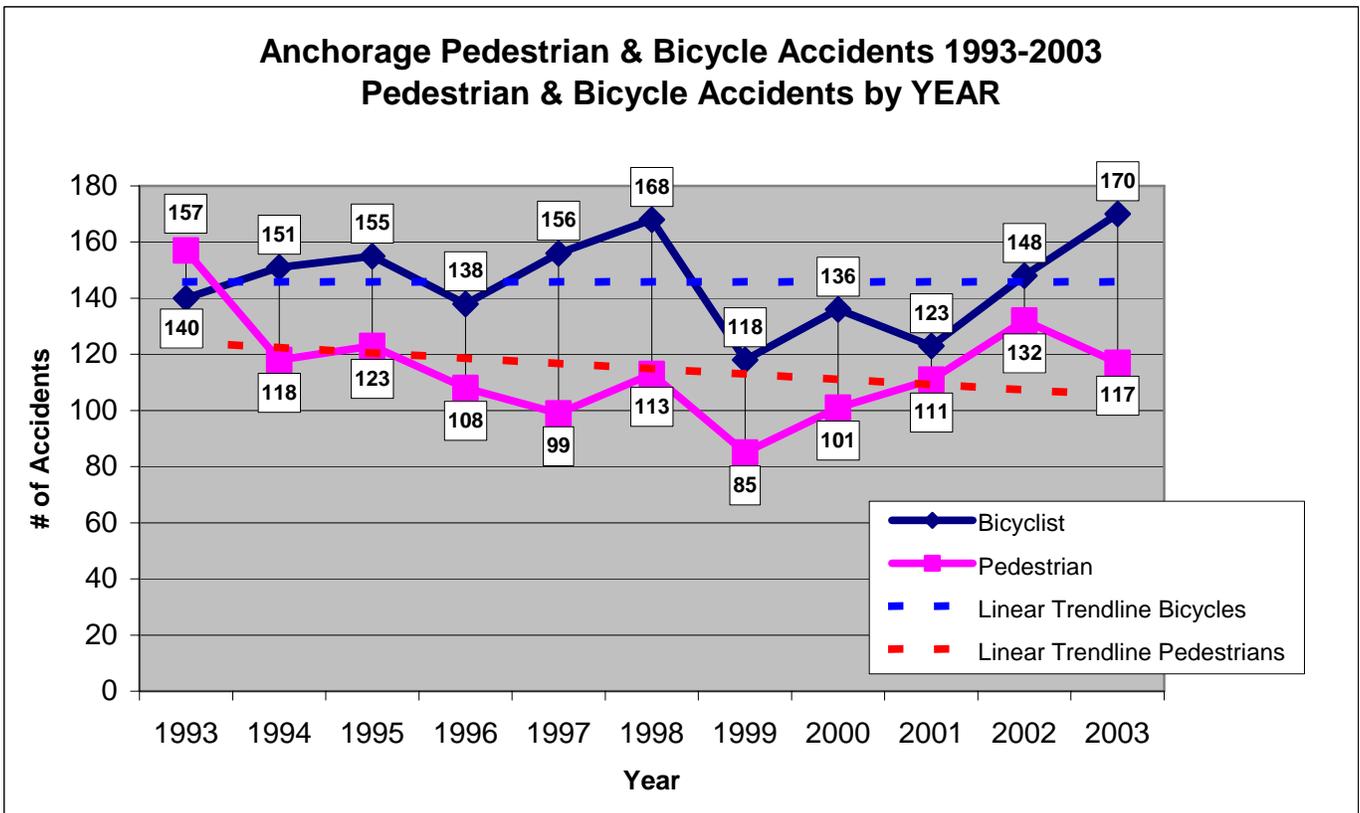

TYPE	1998	1999	2000	2001	2002	Grand Total	Percentage of TOTAL
Bicyclist - Region	168	118	136	123	148	693	56.11%
Bicyclist - Anchorage	154	107	124	116	135	636	57.92%
Pedestrian - Region	113	85	101	111	132	542	43.89%

\* Approximate

The majority of accidents involving pedestrians and bicyclists have occurred within the Municipality of Anchorage. Between 1998 and 2002, a total of 1235 accidents involving pedestrians and bicycles have occurred in the Central Region, 1098 of them or 88.9% in the Municipality of Anchorage. *(287 in 2003, 170 bicycle, 117 pedestrian.)*

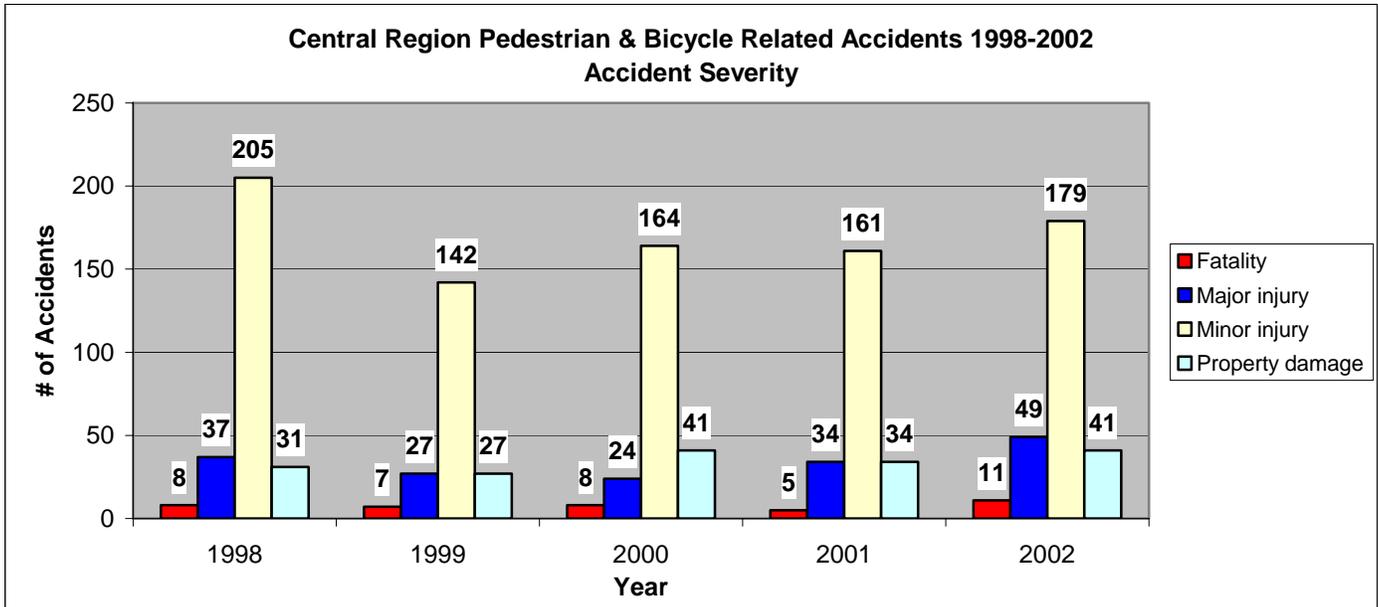

The following table depicts 11 years (1993-2003) of pedestrian and bicycle related accidents by year. Linear trend lines for both pedestrian and bicycle related accidents show that, for the most recent 11 year period, the trend has been nearly flat despite growing traffic volumes.

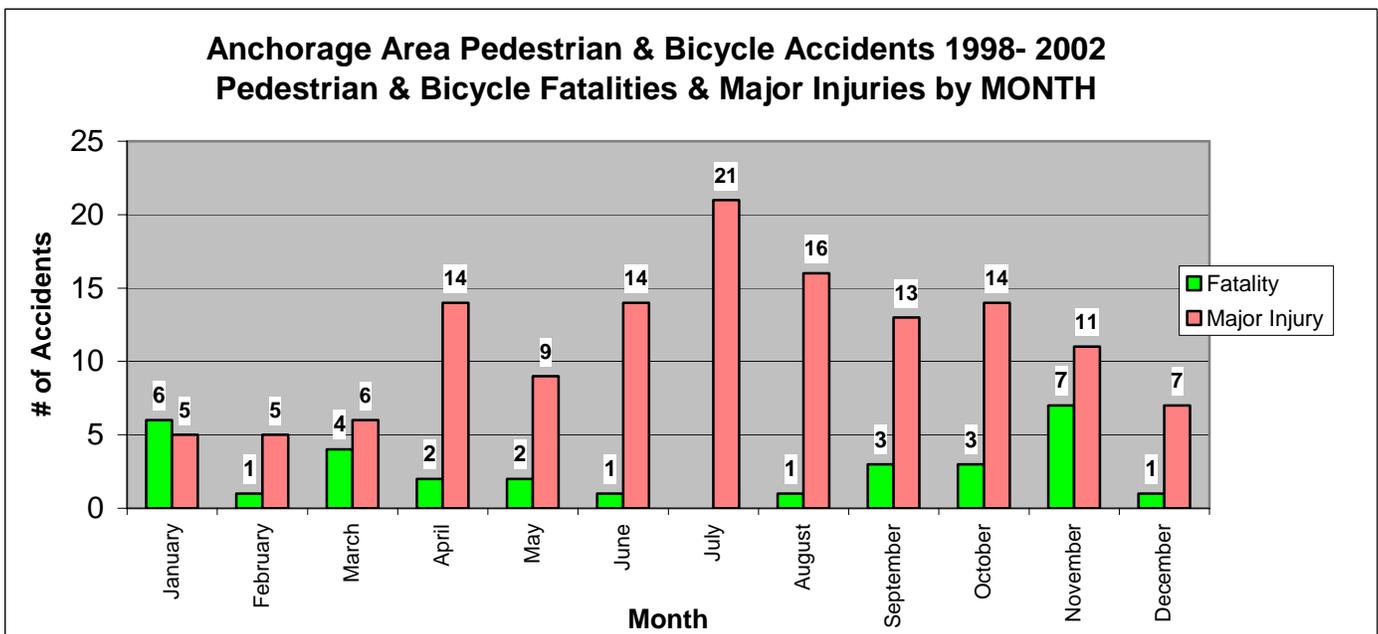

### Accident Severity for Pedestrian and Bicycle Accidents: 1998-2002

LOCATION	FATAL	MAJOR INJURY	MINOR INJURY	Property Damage Only	TOTAL
<b>Region Totals</b>	39	171	851	174	1235
<b>Region % of TOTAL Pedestrian-Bicycle Accidents</b>	3.16%	13.85%	68.91%	14.09%	100.00%
<b>Anchorage Totals</b>	31	135	769	163	1098
<b>Anchorage % of TOTAL Pedestrian-Bicycle Accidents</b>	2.82%	12.30%	70.04%	14.84%	100.00%
<b>Anchorage % All Accidents 1998-2002 (Incl. Peds &amp; Bikes)</b>	0.28%	1.51%	27.44%	70.77%	100.00%
<b>STATEWIDE% ALL Accidents – 1998-2002</b>	<b>0.54%</b>	<b>2.61%</b>	<b>27.55%</b>	<b>69.30%</b>	<b>100.00%</b>

The severity of accidents involving pedestrians and bicycles is predictably higher than the severity of accidents in general. The percentages by severity for these types of accidents in Anchorage are 14.8% property damage, 70.0% minor injury, 12.3% major injury, and 2.8% fatal. By contrast, the severity of ALL accidents in Anchorage for the year 2001 was 70.8% property damage, 27.3% minor injury, 1.6% major injury and 0.3% fatal.

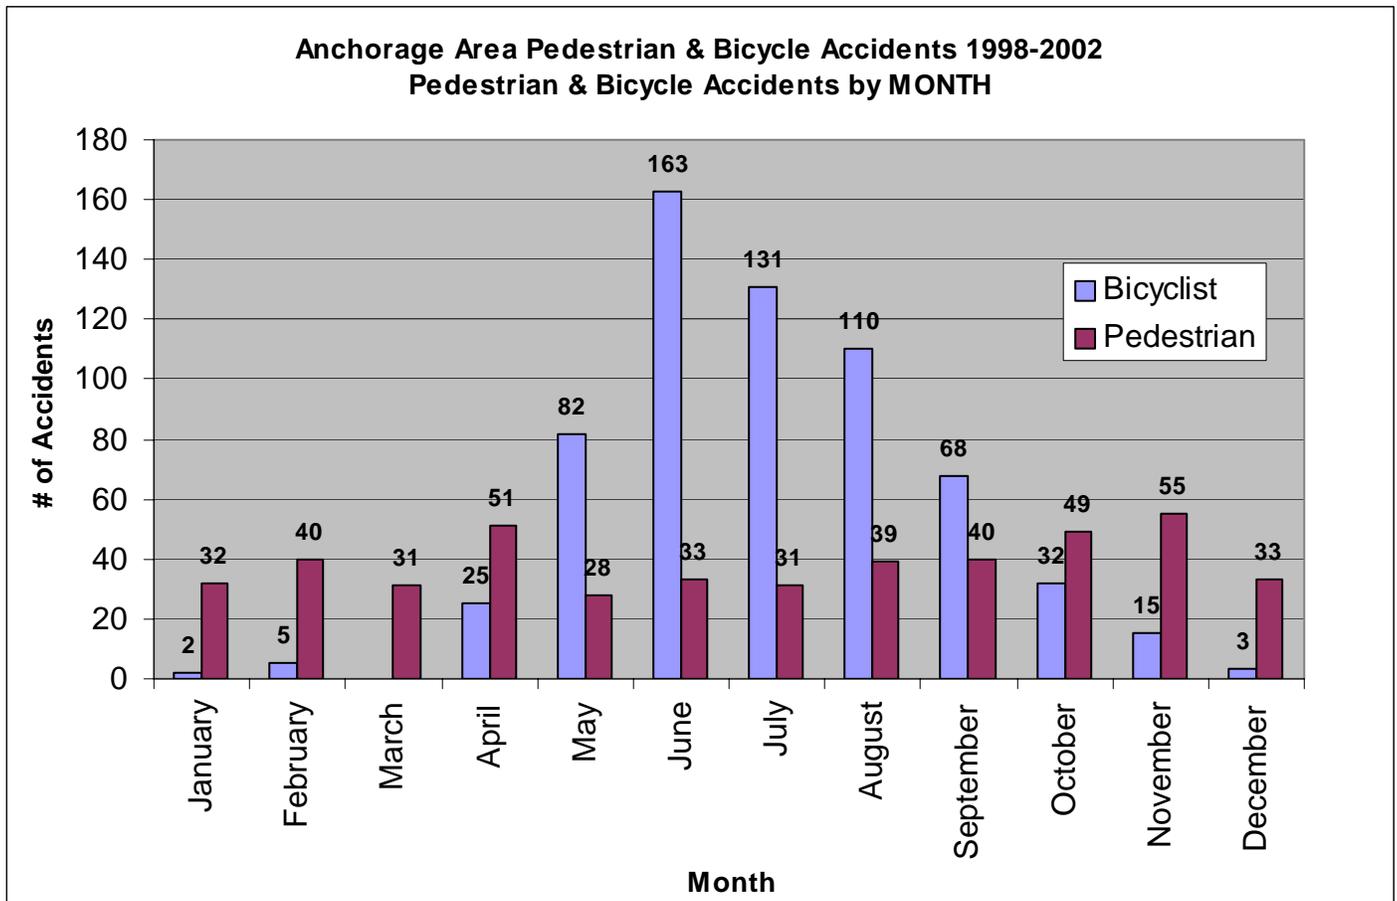

### Accident Severity and Distribution for Pedestrian and Bicycle Accidents by MONTH: 1998-2002

The preceding graph depicts pedestrian and bicycle related accidents by month for the 1998-2002 study period. 31 fatal pedestrian and bicycle related accidents that occurred in Anchorage between 1998-2002. Of these, 30 involved pedestrians and one involved a bicyclist. Fatal pedestrian accidents tend to happen more frequently during winter months. 18 out of 30, or 60% of pedestrian fatalities occurred between November-March. By contrast, most bicycle related accidents resulting in major injury (38 out of 50 or 76%) occur during the April-November time period.

The distribution of all pedestrian and bicycle related accidents between 1988-2002 in Anchorage by month are shown below.

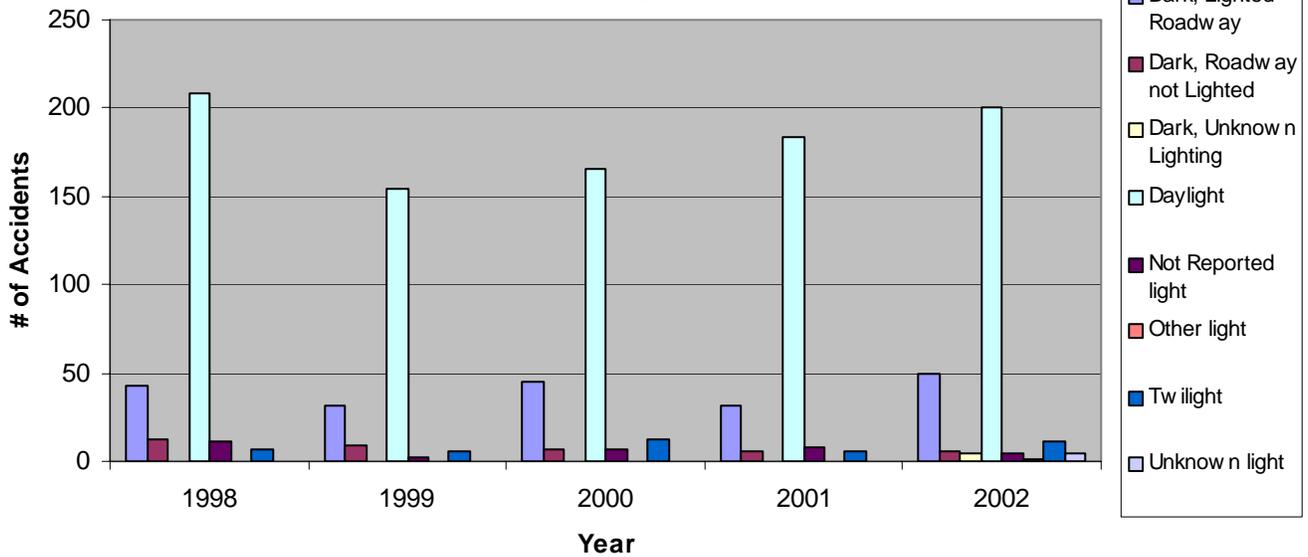

The preceding graph shows that pedestrian related accidents occur throughout the year, averaging 38 accidents per month with a high of 55 in November and a low of 28 in May. Bicycle related accidents average 53 per month but occur, as one would expect, much more frequently during the summer months. Of the 636 bicycle related accidents in Anchorage between 1998-2002, 554 or over 87% occur between May and September.

**Ambient Light Conditions for Pedestrian and Bicycle Accidents: 1998-2002**

LOCATION	Dark, Lighted Roadway	Dark, Roadway not Lighted	Daylight	Twilight	Other or Unknown Light	TOTAL
Region Totals	201	40	911	42	40	1235
Region %	16.28%	3.23%	73.77%	3.40%	3.23%	100.00%
Anchorage Totals	185	22	821	34	36	1098
Anchorage %	16.85%	2.00%	74.77%	3.10%	3.28%	100.00%
Statewide (2001)	18.9%	8.8%	52.3%	4.2%	15.9%	100.0%

The majority of pedestrian and bicycle accidents in Anchorage between 1998 and 2002 (74.77%) occurred during daylight hours followed by dark/lighted roadway with 16.85%. By contrast, the light conditions for ALL accidents in Alaska during 2001 showed that 52.3% occurred during daylight hours and another 18.8% occurred during dark/streetlight conditions. This data shows that pedestrian and bicycle accidents are much more likely to occur during daylight hours verses accidents as a whole.

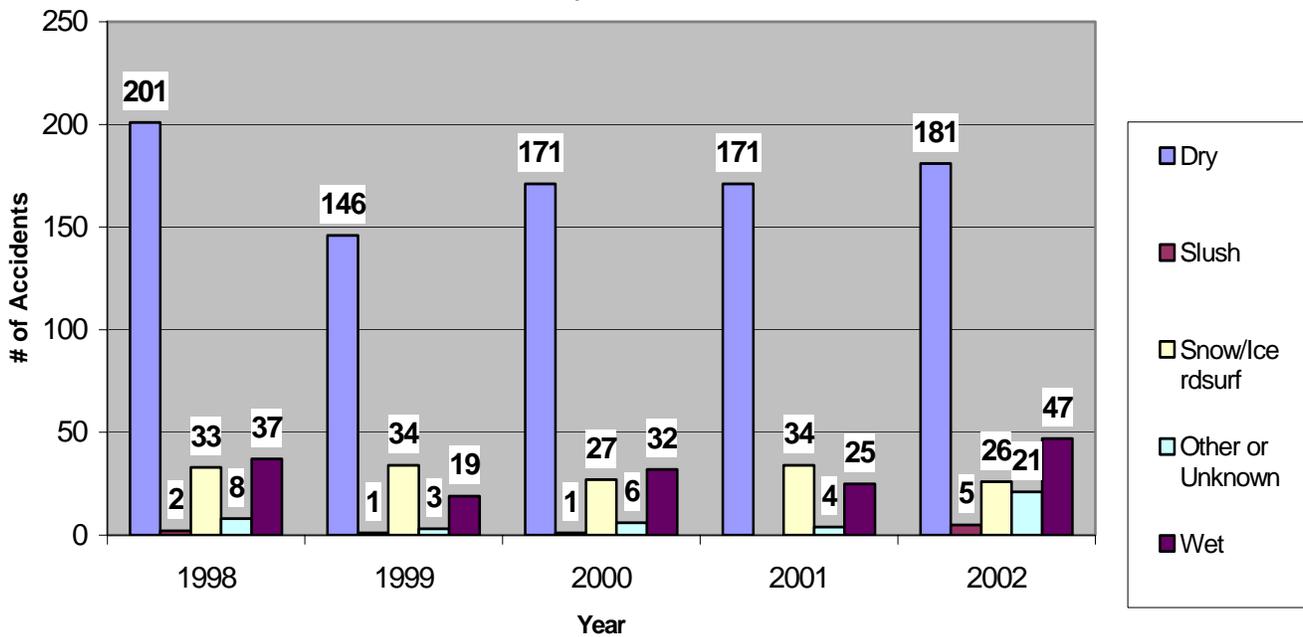

### Central Region Pedestrian & Bicycle Related Accidents 1998-2002 Ambient Light Conditions

### Roadway Surface Conditions for Pedestrian and Bicycle Accidents: 1998-2002

LOCATION	Dry Roadway Surface	Snow/Ice Roadway Surface	Wet Roadway Surface	Slush Roadway Surface	Other or Unknown Roadway Surface	TOTAL
Region Totals	870	154	160	9	42	1235
Region %	70.44%	12.47%	12.96%	0.73%	3.40%	100.00%
<b>Anchorage</b> Totals	777	130	146	7	38	1098
<b>Anchorage</b> %	70.76%	11.84%	13.30%	0.64%	3.46%	100.00%
Statewide (2001)	35.2%	47.4%	9.8%	0.6%	5.9%	100.0%

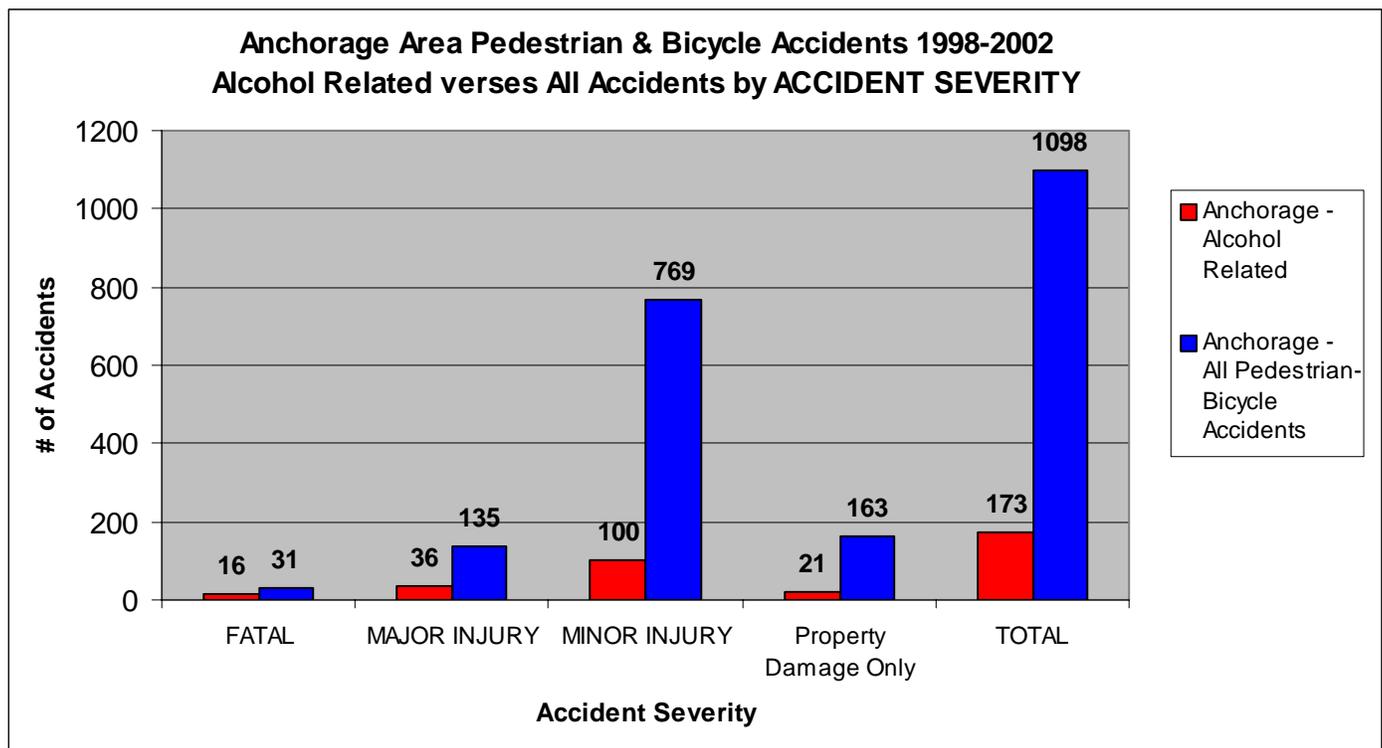

### Central Region Pedestrian & Bicycle Related Accidents 1998-2002 Roadway Surface Conditions

The majority of pedestrian and bicycle accidents in Anchorage between 1998 and 2002 (70.76%) occurred during dry roadway surface conditions followed by wet at 13.30% and snow/ice at 11.84%. By contrast, the roadway surface conditions for ALL accidents in Alaska during 2001 showed that 35.2% occurred during dry pavement conditions with snow/ice conditions accounting for 47.4% and wet accounting for 9.8%. Pedestrian and bicycle related accidents are nearly twice as likely to occur under dry pavement conditions than accidents as a whole. However, pedestrian and bicycle related accidents are over three times less likely to occur during snow/ice pavement surface conditions as all accidents.

**Alcohol Involvement for Pedestrian and Bicycle Accidents by ACCIDENT SEVERITY: 1998-2002**

LOCATION	FATAL	MAJOR INJURY	MINOR INJURY	Property Damage Only	TOTAL
<b>Region Totals</b>	17	41	108	22	188
<b>Region % of TOTAL Pedestrian-Bicycle Accidents</b>	43.59%	23.98%	12.69%	12.64%	15.22%
<b>Anchorage Totals</b>	16	36	100	21	173
<b>Anchorage % of TOTAL Pedestrian-Bicycle Accidents</b>	51.61%	26.47%	13.02%	12.88%	15.76%
<b>Anchorage ALL Accidents - 2001</b>	25	146	2507	6496	9174
<b>Anchorage ALL Alcohol Related Accidents - 2001</b>	14	31	229	372	646
<b>Anchorage % of TOTAL Accidents involving Alcohol</b>	56.00%	21.23%	9.13%	5.72%	7.04%

Between 1998 and 2002 within the Municipality of Anchorage, over ½ of the fatal pedestrian and bicycle related accidents (16 of 31) involved alcohol, either on the part of the pedestrian, bicyclist or the driver of the vehicle. Of the alcohol-involved individuals, 10 were pedestrians, 1 was a bicyclist and 8 were motor vehicle operators. There were 19 alcohol-involved individuals out of 16 fatal accidents because both the pedestrian and the vehicle driver were under the influence of alcohol in 3 of the accidents.

While 15.76 % (173 out of 1098) pedestrian and bicycle related accidents involved alcohol, 7.04% (646 out of 9174) of the TOTAL accidents in the Municipality of Anchorage in 2001 were alcohol related. This indicates that a significantly higher percentage of pedestrian and bicycle related accidents involve alcohol.

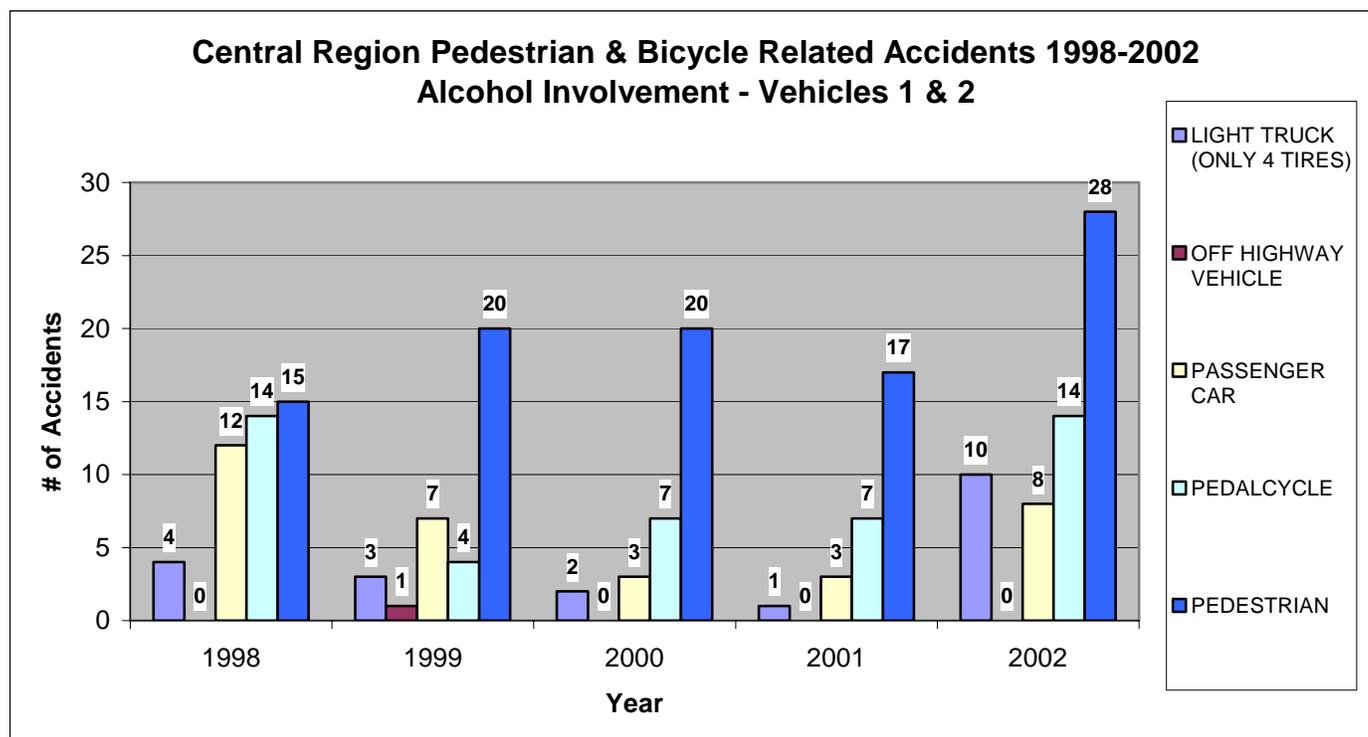

### Vehicle Number 1 and 2 Alcohol Involvement by VEHICLE TYPE: 1998-2002

Vehicle Type- Vehicle #1 (Generally At-Fault Vehicle)		1998	1999	2000	2001	2002	TOTAL	Percentage of TOTAL Alcohol Involved
LIGHT TRUCK (ONLY 4 TIRES)	Alcohol	3	2	2	1	9	17	12.98%
OFF HIGHWAY VEHICLE	Alcohol	0	1	0	0	0	1	0.76%
PASSENGER CAR	Alcohol	10	6	3	3	5	27	20.61%
PEDALCYCLE	Alcohol	9	3	6	6	5	29	22.14%
PEDESTRIAN	Alcohol	8	11	13	8	17	57	43.51%
<b>TOTALS by YEAR</b>		<b>30</b>	<b>23</b>	<b>24</b>	<b>18</b>	<b>36</b>	<b>131</b>	<b>100.00%</b>

Vehicle Type- Vehicle #2 (Generally NOT at fault)		1998	1999	2000	2001	2002	TOTAL	Percentage of TOTAL Alcohol Involved
LIGHT TRUCK (ONLY 4 TIRES)	Alcohol	1	1	0	0	1	3	4.35%
PASSENGER CAR	Alcohol	2	1	0	0	3	6	8.70%
PEDALCYCLE	Alcohol	5	1	1	1	9	17	24.64%
PEDESTRIAN	Alcohol	7	9	7	9	11	43	62.31%
<b>TOTALS by YEAR</b>		<b>15</b>	<b>12</b>	<b>8</b>	<b>10</b>	<b>24</b>	<b>69</b>	<b>100.00%</b>

### TOTAL: Alcohol Involvement by VEHICLE TYPE: 1998-2002

Vehicle Type- Vehicle #1 And 2		1998	1999	2000	2001	2002	TOTAL	Percentage of TOTAL Alcohol Involved
LIGHT TRUCK (ONLY 4 TIRES)	Alcohol	4	3	2	1	10	20	10.00%
OFF HIGHWAY VEHICLE	Alcohol	0	1	0	0	0	1	0.50%
PASSENGER CAR	Alcohol	12	7	3	3	8	33	16.50%
PEDALCYCLE	Alcohol	14	4	7	7	14	46	23.00%
PEDESTRIAN	Alcohol	15	20	20	17	28	100	50.00%
<b>TOTALS by YEAR</b>		<b>45</b>	<b>35</b>	<b>32</b>	<b>28</b>	<b>60</b>	<b>200</b>	<b>100.00%</b>

The preceding tables show that 200 individuals were under the influence of alcohol in pedestrian and bicycle related accidents. Of the two main vehicles involved in each accident, vehicle #1 is generally considered to be the one at fault. The pedestrian was under the influence in 50% of these accidents, the bicyclist was under the influence in 23% of these accidents, and the vehicle operator was under the influence in 27% of these accidents. This translates into the pedestrian or bicyclist being under the influence in 73% of the alcohol-related pedestrian and bicycle accidents. See the table below.

**Individuals Involved in Alcohol Related Pedestrian and Bicycle Collisions: 1998-2002**

Percent of Pedestrian and Bicycle Collisions where PEDESTRIAN was Under ALCOHOL Influence	50.00%	73.00%
Percent of Pedestrian and Bicycle Collisions where BICYCLIST was Under ALCOHOL Influence	23.00%	
Percent of Pedestrian and Bicycle Collisions where DRIVER was Under ALCOHOL Influence	26.50%	27.00%
Percent of Pedestrian and Bicycle Collisions where OFF ROAD VEHICLE was Under ALCOHOL Influence	0.50%	
TOTALS	100.00%	100.00%

**Top 25 Roadways with the Highest Number and Rate of Pedestrian and Bicycle Related Accidents & The Top 50 Intersections with the Highest Number and Rate of Pedestrian and Bicycle Related Accidents**

The tables on the following page show the top 25 roadways and top 50 intersections in Anchorage for pedestrian and bicycle related accidents, by both TOTAL NUMBER OF ACCIDENTS and ACCIDENT RATE.

**Roadway Segments**

The ACCIDENT NUMBER table shows roadways with the highest total number of pedestrian and bicycle related accidents between 1998-2002. Using this measure, Northern Lights Boulevard has the most of these types of accidents with a total of 83 pedestrian and bicycle related accidents on this 7.58 mile corridor during the study period. This is followed by Lake Otis Parkway with 59 accidents, Tudor Road with 47 accidents, Spenard Road with 43 accidents and Minnesota Drive with 41 accidents.

The ACCIDENTS PER MILE table shows roadways with the highest number of accidents per mile in Anchorage. Pedestrian/Bicycle related accident rates have also been calculated for the segments in both the ACCIDENT NUMBER and ACCIDENTS PER MILE tables. These rates take into account the number of accidents, the segment volume (segment ADT) and the length of the segment. The formula used to calculate the rate is:

$$\frac{\text{Number of Accidents (5 Years)} \times 1,000,000.00}{\text{Segment Length} \times \text{ADT} \times (365 \times 5)}$$

Using the ACCIDENTS PER MILE measure, 6<sup>th</sup> Avenue ranks number one with 22.915 bicycle/pedestrian accidents per mile. This is followed by Benson Boulevard (20.71 accidents/mile), Gambell Street (17.82 accidents/mile), Ingra Street (15.55 accidents/mile), and 5<sup>th</sup> Avenue (14.80 accidents/mile).

**Intersections**

The ACCIDENT NUMBER table shows intersections in Anchorage with the highest total number of pedestrian and bicycle related accidents between 1998-2002. Using this measure, the Intersection of Northern Lights Boulevard @ Spenard Road has the highest number of pedestrian and bicycle related accidents with 14, followed by Minnesota Drive @ Spenard Road with 11, Tudor Road @ Lake Otis Parkway with 11, Muldoon Road @ Debarr Road with 10 and Seward Highway @ Northern Lights Boulevard with 10.

The ACCIDENT RATE table shows intersections with the highest rate of accidents per million entering vehicles. These rates take into account the number of accidents, and the entering volume (ADT). The formula used to calculate the rate is:

$$\frac{\text{Number of Accidents (5 Years)} \times 1,000,000.00}{\text{ADT} \times (365 \times 5)}$$

Using this measure, the intersection of 16<sup>th</sup> Avenue @ Eagle Street has the highest accident rate (0.514) followed by Mt. View Drive @ Price Street with a rate of 0.254, 3<sup>rd</sup> and Karluk with a rate of 0.231, Northern Lights Boulevard @ Spenard Road with a rate of 0.224, and 4<sup>th</sup> Avenue @ D Street with a rate of 0.198.

<b>TOTAL</b>	<b>1092</b>	<b>100.000%</b>	<b>100.000%</b>	<b>382</b>	<b>100.000%</b>	<b>100.000%</b>

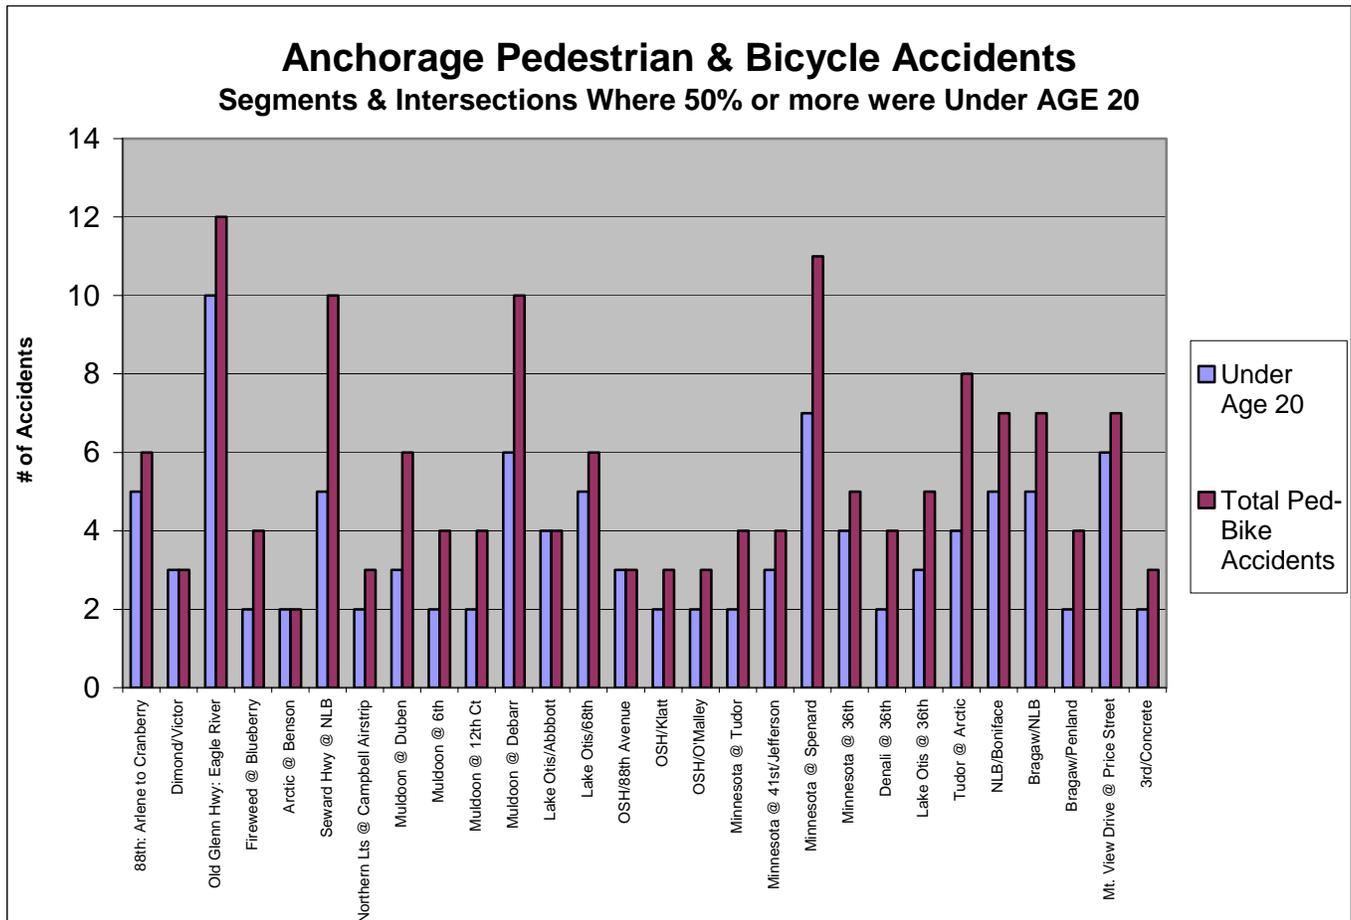

Ages of pedestrians and bicyclists involved in accidents with motor vehicles in Anchorage closely match statewide statistics from 2001. In Anchorage, 36.1% of all pedestrian and bicycle related accidents involved individuals younger than 21. Statewide, that percentage was 40.3%. Pedestrians and bicyclists between the ages of 21 and 50 make up 43.5% of the total while individuals over the age of 50 account for 11.1% of the total in Anchorage. The age of the individual is not known in approximately 9.3% of the pedestrian and bicycle accidents in Anchorage. Statewide, pedestrians and bicyclists between the ages of 21-50 make up 36.9% of the total while individuals over age 50 account for 13.6% of the total.

Locations in Anchorage where accidents involving pedestrians and bicyclists age 20 or lower were plotted on a map of Anchorage to determine areas and/or corridors where these accidents are occurring. Clusters of accidents involving pedestrians or bicyclists have occurred along the Muldoon Road, Tudor Road, Lake Otis, Minnesota Drive, Mt. View Drive, 88<sup>th</sup> Avenue, West Dimond, Fireweed Lane, Northern Lights Boulevard, and Benson Boulevard corridors.

Accidents involving pedestrians or bicyclists age 10 or below have occurred in the Tudor-Lake Otis, Muldoon Road North, Mt. View Drive, and Spenard areas. There is also a concentration of accidents involving pedestrians or bicyclists age 5 or less on Boniface Parkway. Other accidents involving pedestrians and bicyclists age 5 or less have also occurred in the South Addition/Chester Creek and Mt. View areas.

**Intersections and Roadway Segments in Anchorage Where Pedestrians or Bicyclists Under Age 20 Accounted for 50% or More of the Total Accidents**

Intersections and roadway segments in Anchorage where there were at least 3 pedestrian or bicycle related accidents and pedestrians or bicyclists under the age of 20 accounted for at least 50% of the total accident were evaluated to determine locations where the age of the pedestrian or bicyclist might be over represented or otherwise a factor. 111 individuals under the age of 20, either walking or biking, were involved in accidents at 32 Intersections or roadway segments in Anchorage, 18 of which were under 12 years of age.

Intersections with the highest number and percentage of under age 20 pedestrians or bicyclists involved in an accident included Minnesota Drive @ Spenard Road where 7 out of 11 accidents involved this age group, Mt. View Drive @ Price Street with 6 out of 7, Lake Otis Parkway @ 68<sup>th</sup> Avenue with 5 out of 6, Northern Lights Blvd. @ Boniface Parkway with 5 out of 7, and Bragaw Street @ Northern Lights Blvd. with 5 out of 7.

Roadway segments with higher concentrations of accidents involving pedestrians or bicyclists under the age of 20 included 88<sup>th</sup> Avenue, Arlene Street to Cranberry Street with 5 of 6; and the Old Glenn Highway in Eagle River with 10 of 14.

Some of the locations including 88<sup>th</sup> Avenue, Fireweed Lane @ Blueberry Lane, Lake Otis Parkway @ 36<sup>th</sup> Avenue, Tudor Road Arctic Boulevard, Bragaw Street @ Northern Lights Blvd, and Mt. View Drive @ Price Street are located near schools. Three of these locations have pedestrian or bicycle accidents where the ages of the individual walking or biking were under 12 years.

**Intersections and Selected Highway Segments in ANCHORAGE Where Pedestrian or Bicyclist Under Age 20 Accounts for 50% or Greater of the Total Pedestrian/Bicyclist Accidents: 1998-2002**

The preceding table shows the 31 fatal accidents involving pedestrians and bicycles recorded in Anchorage between 1998 and 2002. 16 of these involved alcohol, either by the pedestrian, bicyclist or motor vehicle. In 3 cases, both the pedestrian or bicyclist and the vehicle driver were under the influence.

Routes with the most fatalities include Northern Lights Boulevard with 4 (2 are at the Seward Highway), Bragaw Street with 3 (2 are at the Glenn Highway), Spenard Road with 3, and Fireweed Lane with 3. Fatal pedestrian related pedestrian and bicycle accidents are distributed by year, roadway surface, light conditions and day of week as follows:

<u>YEAR</u>	1998	1999	2000	2001	2002	<u>TOTAL</u>
# of FATAL Accidents	6	4	7	5	9	<b>31</b>

<u>Roadway Surface Conditions</u>	Dry	Snow/Ice	Wet	<u>TOTAL</u>

Warning Sign					1	1	0.091%
Yield Sign	1					1	0.091%
<b>Grand Total</b>	<b>247</b>	<b>182</b>	<b>209</b>	<b>209</b>	<b>251</b>	<b>1098</b>	<b>100.00%</b>

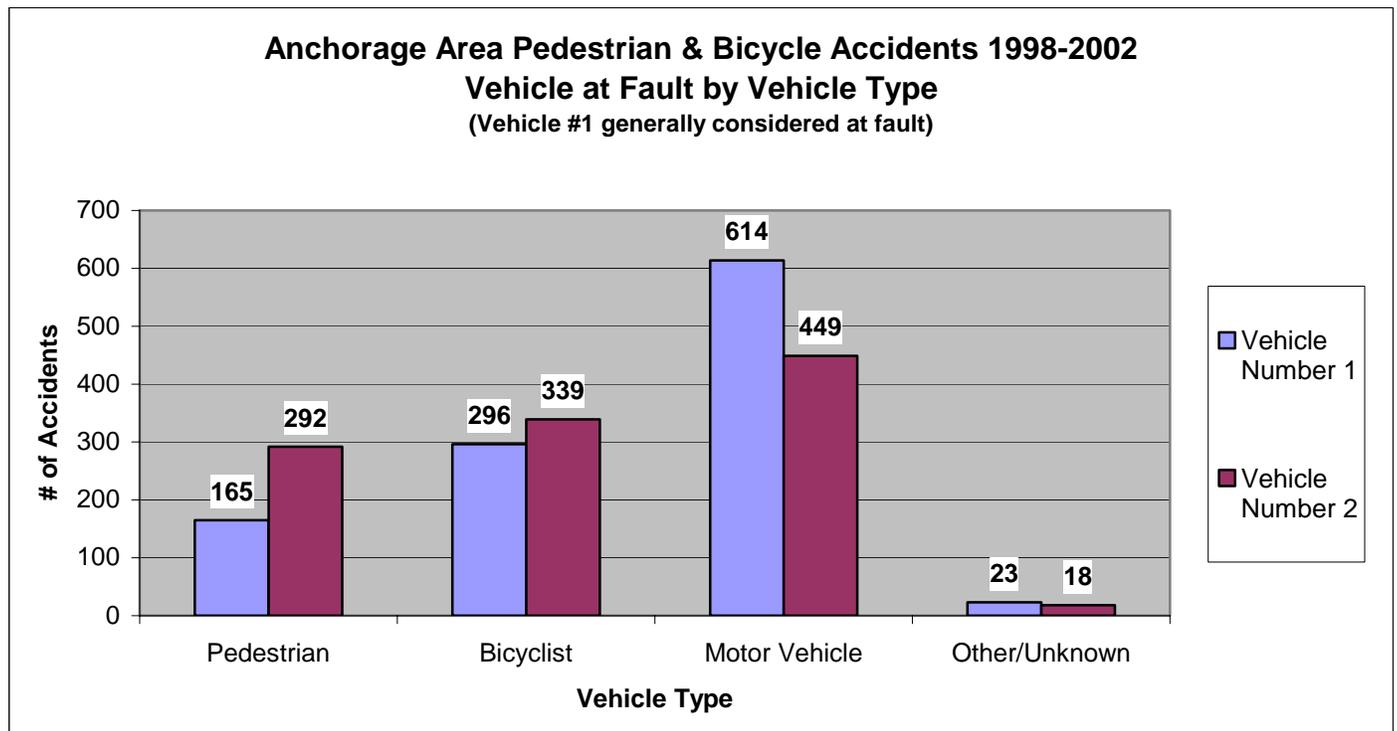

The preceding table shows that the largest percentage of pedestrian and bicycle related accidents (41.44%) in Anchorage have occurred where there no traffic control devices in place, followed by traffic control signals, which account for 35.20%. By contrast, statewide data from 2001 indicates that 51.4% of ALL accidents occur at uncontrolled locations and 24.5% occur at traffic control signals. A higher percentage of pedestrian and bicycle related accidents are occurring at traffic control signals then accidents statewide while a lesser percentage of pedestrian and bicycle related accidents are occurring at uncontrolled locations verses accidents statewide.

### Vehicle and Pedestrian/Bicycle Actions Prior to Accident in Anchorage

Vehicle, pedestrian and bicyclist actions just prior to the accident were reviewed and are displayed below. Generally, vehicle number 1 is the one primarily responsible for the accident but this varies by the officer who completes the accident report. In order to help establish what type of vehicle was at fault, the following table summarizes vehicle number 1 and vehicle two by type:

Vehicle Number	Pedestrian	Bicyclist	Motor Vehicle	Other/Unknown	TOTALS
Vehicle Number 1	165	296	614	23	1098
Vehicle Number 2	292	339	449	18	1098
<b>TOTALS</b>	<b>457*</b>	<b>635*</b>	<b>1063</b>	<b>41</b>	<b>2196</b>

\* These totals do not exactly match the number of pedestrian and bicycle accidents in Anchorage due to the presence of a third vehicle which is not listed

Since vehicle number 1 is generally assumed to be the one at fault, the preceding table suggests that the pedestrian was at fault in 165 accidents or 15.02% of the total, the bicyclist was at fault in 296 accidents or 26.96%, and the motor vehicle was at fault in 614 or 55.92% of the accidents.

The majority of pedestrians, bicycles or motor vehicle drivers (1041 or 47.40%) were going straight ahead at the time of the accident. Another 362 or 16.48% were making a right turn and 128 or 5.82% were making a left turn. The left and right turners were fairly evenly split motor vehicle operators turning into the pedestrian or bicyclist or bicyclists turning into the motor vehicle. The vehicle actions are shown in the following table:

**Vehicle #1 and Vehicle # 2 Actions at Pedestrian/Bicycle Accident Locations in ANCHORAGE: 1998-2002**

<b>Vehicle Action</b>	<b>Vehicle Number 1 Action (Vehicle, pedestrian or Bicyclist)</b>	<b>Vehicle Number 2 Action (Vehicle, pedestrian or Bicyclist)</b>	<b>GRAND TOTAL</b>	<b>Percent of TOTAL</b>

## **Part II: Pedestrian and Bicycle Accidents in Anchorage Education, Enforcement & Engineering Recommendations**

Part II involved an interagency approach to review the data discussed in Part I, address the issues raised, and develop strategies for mitigating pedestrian and bicycle related accidents in Anchorage. *These strategies are offered as recommendations to be incorporated into the planning, design and operation of pedestrian & bicycle facilities as appropriate. They do not mandate the use of specific strategies.*

### **Evaluation of Pedestrian & Bicycle Related Accident Data**

Although this study was undertaken by DOT/PF to determine the extent, types and patterns of pedestrian and bicycle related accidents in Anchorage, one agency cannot address all of the issues raised with respect to the accident data analysis and mitigation recommendations. We realized that other agencies were needed to help review the data, address the issues raised, and develop recommendations for mitigating pedestrian and bicycle related accidents in Anchorage. We convened an interagency strategy meeting with other public agency staffers to discuss accident patterns and recommendations.

### **Interagency Strategy Meeting**

The Interagency Strategy Meeting was held on July 21-22, 2005 at the Coast International Inn in Anchorage to review the scope and extent of pedestrian and bicycle related accidents with motor vehicles in Anchorage. Key public agency staffers who routinely work together participated:

Alaska DOT/PF (DOT)  
State Traffic Engineer  
Regional Traffic Engineer  
Regional Planning Manager  
Municipality of Anchorage Traffic Department (MOA)  
People Mover  
Alaska Injury Prevention Center (AIPC)  
Anchorage Police Department (APD)  
Anchorage School District (ASD)  
Alaska Highway Safety Office (AHSO)  
Alaska State Troopers (AST)

Each agency has a direct responsibility and authority to help address these accidents. The goal was to develop a shared focus on accidents from the perspectives of Education, Enforcement, and Engineering.

General findings by this multi agency group include:

- There are approximately 220 nonmotorized accident reports each year in Anchorage, as big as any moose-vehicle totals.
- To identify the types and causes of pedestrian and bicycle related accidents requires a focused study to access specific pedestrian and bicycle related accident data and distinguish them from within the much larger pool of all vehicle accident data.
- Alaska has an average pedestrian accident rate compared to the rest of the US, but there are still some focus areas to study.

- Alaska has a higher number of bike related accidents (58%) than pedestrian related accidents (42%) & leads the country in bicycle fatality rate, despite short bicycling seasons. We may see higher accident rates involving bicycles as more wintertime bicycle riding is being observed and winter maintenance of bicycle paths has improved.

- There are significant pedestrian accidents in midtown and downtown (Approximately 35% of total Anchorage accidents.)

- There is a higher risk of injury & fatality with pedestrian and bicycle related accidents than other types of accidents. (3% fatal, 12% Major Injury, 70% Minor Injury for pedestrian & bicycle related accidents vs. 0.6%, 4% and 28% for all accidents.)

- Right angle accidents with turning vehicles are a number one pattern. That is, vehicles on a side street preparing to enter the cross street fail to look right after looking left for a gap in the traffic stream and strike a pedestrian or bicyclist on their right. (Evident in top 15 intersections for # of accidents)

- There are several sites with a continuing record of injuries and/or several fatalities. (*Northern Lights/Seward Highway had 2 fatalities during the past 10 years, Glenn/Bragaw had 3 fatalities during that same period.*)

- Alcohol involvement is a big factor, particularly in fatal pedestrian and bicycle related accidents. (Involved in 52% of fatal pedestrian/bike related accidents.)
- School related pedestrian & bicycle accidents are not a significant problem. (Anchorage School District Hazardous Transportation Committee & school walking route traffic controls and maps effective.)
- Jaywalking, mid-block Crossing (5 lane roads), and nonconformance with the rules of the road were a major observation.

- The design of arterial bike routes is a concern at intersections, particularly signalized intersections where bicyclists use curb cuts intended for the cross street.
- The MOA Transportation Improvement Program (TIP) contains a Pedestrian Safety & Accessibility Improvements project. (\$250,000.00/Year)
- The MOA Parks and Recreation Trails Coordinator is working on proposed Anchorage Pedestrian & Bicycle Program.

## **Pedestrian & Bicycle Related Accident Background**

Pedestrian and bicycle accidents with motor vehicles are not a large portion of all accidents in Anchorage (220 of more than 9000 per year average). Pedestrian fatality rates per 100,000 population represented 8.4 % of all traffic fatalities in Alaska in 2003 and were lower than the national average with 30 states having a higher rate than Alaska. However, bicyclist fatality rates per million population represented 4.2% of all traffic fatalities in Alaska in 2003 and were higher than any other state. Although bicycle and pedestrian related accidents represent less than 3% of the total traffic accidents in Anchorage, these types of accidents are a major concern as they generally result in injuries or fatalities. These types of accidents, particularly when they result in a fatality, generate considerable emotion in the community and calls for improvements in the transportation infrastructure to better accommodate pedestrians and bicycle riders.

Pedestrian and bicycle accident rates and averages are only one measure of the frequency of these types of accidents per population. Exposure (the amount of pedestrian, bicycle and motor vehicle traffic in a particular area) and usage lead to problem areas. However, exposure is not easily measured as it changes from day to day and season to season. Other areas may be of similar conflict and risk, but not high statistically because of low usage and exposure. These other low exposure areas still need the same considerations.

It is also important to note that few pedestrian and bicycle related accidents with motor vehicles are related to trips to and from schools in Anchorage, a larger issue in many communities across the United States. Our lower pedestrian and bicycle rates associated with school commutes are due in part to the efforts of the Anchorage School District through the Hazardous Transportation Committee (HTC). This group is made up of professionals from the Anchorage School District, the Anchorage Police Department, the Municipal Traffic Department and the Municipal Street Maintenance Division, the State Department of Transportation Traffic & Safety and Maintenance and Operations Sections, PTA representatives and others. The HTC in cooperation with the Municipal Traffic Department has produced school walking routes for all elementary schools and is expanding to include middle and high schools. School attendance boundaries have been created with safe walking in mind. Where students must cross a busy street to get to school, safety measures including bussing, traffic signals, 20 MPH flashing school zones, and crossing guards have been implemented, resulting in safer home to school trips.

## **Pedestrian & Bicycle Related Accident General Characteristics**

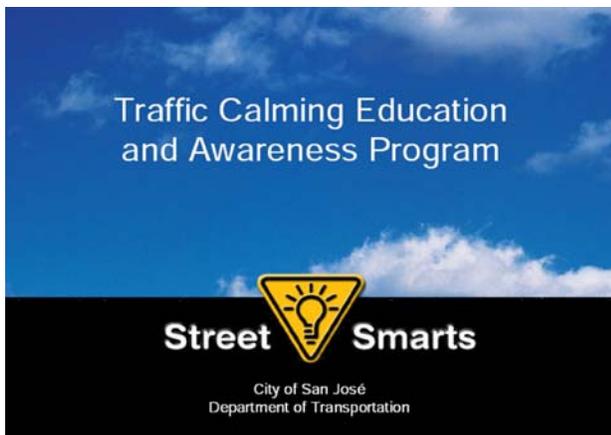

In Part I of this report, the highest accident locations and most common accident patterns were identified. The first day of the interagency strategy meeting included a short field review of midtown and downtown sites. Short observation periods confirmed that Rules of the Road conflicts and near misses between motorized and nonmotorized users were a frequent occurrence and were the fault of both parties. While Alaska has an average accident rate between pedestrians and vehicles as compared to other states, our bicycle-vehicle accident rate is the highest in the United States, up to 3 to 4 times most other states, even

with a shorter biking season for most users. From over 1,000 accidents in five years, the top three most identifiable patterns were:

- 1) Angle accidents between sidestreet turning motorists and bicyclists on the crossroad, especially right turns versus right side cyclists, at both signalized and unsignalized intersections.
- 2) Pedestrian accidents mid-block, either close to nearby intersections or far enough away from these intersection opportunities that additional controls may be needed to assist the crossing maneuver.
- 3) Alcohol involvement on the part of either the motorized or nonmotorized user in the most serious accidents.

Second, the agency staffers discussed strategies for reducing these accidents and developed what the group considers to be the most effective strategies to target specific accident patterns and behaviors, taking into account enforcement issues, educational opportunities and available engineering solutions.

We believe effective mitigation must be through a balanced top down approach through Education, Enforcement, and Engineering. We encourage AMATS leaders to unify and coordinate planning for this approach through an umbrella program. DOT/PF staff notes such a program is already taking some roots in funding through the Parks and Recreation Division. No reinvention is required. Similar new plans have been developed in many cities, commonly called *Street Smarts*. The three E's are managed as a coordinated plan focused on bringing all disciplines together on the same problems. Staff discussed the most effective strategies in each of E's, which could be selected for implementation. Each method needs to be tailored to specific accident patterns, behaviors, and sites.

While there are a multitude of strategies and resources available, only a smaller portion appears to be able to make a significant and lasting impact. It is our intent to select the top strategies and not focus on all of them. Most of all, strategies need to be coordinated into targeting the top identifiable accident patterns and behaviors leading to those patterns. Targeting too many patterns and behaviors could lessen the effectiveness of the strategies. The agency working group developed the following strategies during the July 21-22<sup>nd</sup> meeting:

## Planning/General Recommendations

The Municipality of Anchorage may want to consider a Street Smarts Program unifying the 3 E's under one umbrella. Other examples show the best possible program is coordinated by the local government. Anchorage has already embarked upon a proposed Anchorage Pedestrian Plan whose purpose is "To establish a framework for improvements that will enhance the pedestrian environment and increase opportunities to choose walking as a safe mode of transportation." Information could be draw from other City's street smarts programs rather than having to develop goals from scratch. Other recommendations include:

- Gather more information on safety effectiveness and risk studies of biking with traffic vs. against traffic.
- Consider a midtown sidewalk Maintenance District, modeled after Downtown Partnership. The goal of such a program would be to improve sidewalk accessibility under all conditions.
- Convene these interagency meetings in the future, perhaps every two to three years. Some sort of steering committee, a group tasked with developing the recommendations made by the interagency group, should meet on a frequent basis as needed to implement the recommendations.

## Education

As stated earlier, educational tools should focus on the 3 E's. Examples of successful educational programs include the "Call Before U Dig", "Click it or Ticket", or "Plug @ 20" campaigns. These types of campaigns are more effective because they are a single-issue awareness campaign that also broadens the importance of the rest of the issue as a whole.

Educational tools should identify the specific problems found in Anchorage including accident patterns (right turn on red, mid block jaywalking, lack of parallel or crossing facilities, etc.), fault, (either the bicyclist, the pedestrian the motorist or some combination), the age group most frequently involved, and high accident locations. Separate education related recommendations should be developed for pedestrian vs. bicycle related accidents citing the types and conditions listed above. The following educational ideas were identified during the two-day interagency strategy meeting:

1. **Pedestrian and Bicycle Safety Brochures & Posters with bike riding & pedestrian walking tips.**

These materials should be aimed at the pedestrian, bicyclist, and the motorist with input in the preparation of the material from school age children, the Anchorage School District, bicycle clubs, and pedestrian/bicycle advocacy groups. Since adult pedestrian and bicycle riders make up a large portion of those involved in accidents, they need to be specifically targeted. Information should be targeted to specific issues found in Anchorage and related safety tips.

These materials could be distributed at:

- People Mover Buses
- School Buses
- Bicycle Shops
- Division of Motor Vehicles (DMV)
- Schools
- Shopping Malls
- Transit Centers, Etc.

2. **Public Service Announcement(s) Bicycle, pedestrian and motor vehicle operator tips.**

We envision some type of video production aimed at the pedestrian, bicyclist, and the motorist with input in the preparation of the material from school age children and the ASD. Information should be targeted to specific issues found in Anchorage and related safety tips.

The PSA's could be made available to: Division of Motor Vehicles (DMV)  
Anchorage School District Cable Channel  
Municipality of Anchorage (MOA) Cable Channel  
Media Outlets  
University of Alaska Anchorage (UAA) Cable Channel

**3. Web Site(s) for Pedestrian and Bicycling Safety**

Consider a website for pedestrian and bicycle safety education to include local statistics, "hot spots" and tips for pedestrians, bicyclists and drivers. *(Further discussions will need to take place regarding how often the website will be updated, including generic enough information that it does not require constant updates, and the desire of people to have "their" issue on the site. It should be strictly limited to agency information and links to data driven sites, factual sites, or sites sponsored by public funds only. We would only show web maps in a regional nature, shading midtown, downtown, and some corridors, and not listing the detailed stats. For detailed stats, the report can be online separately.)*

A website could be hosted by: Municipality of Anchorage (MOA)  
Alaska Department of Transportation (DOT)  
Alaska Highway Safety Office (AHSO)  
Division of Motor Vehicles (DMV)  
Anchorage School District (ASD)  
(Some could be by link to another page.)

**4. Print Ads for pedestrian/Bicycle Safety**

Print ads promoting pedestrian and bicycle safety should be aimed at the pedestrian, bicyclist, and the motorist with input in the preparation of the material from school age children & the ASD. Information should be targeted to specific issues found in Anchorage and related safety tips.

Located at: School Buses  
People Mover Buses  
Transit Centers/Benches  
School Newsletters  
Bike Shops  
Shopping Malls

**Other Education Ideas discussed at meeting.**

Tips on safety equipment usage.

Helmet giveaway programs

Visibility item distribution including reflective tapes, backpacks, tags, shoes, etc.

DMV Drivers Manual Improvements with additional emphasis on bicycles, pedestrians and their interaction with motor vehicles.

Ads in theatres promoting pedestrian and bicycle safety

Additional emphases on walk or bike to school or work days. Promote motorist becoming a pedestrian or bicyclist for a day to see issues from another perspective.

Other ideas can be found in the programs adopted by other cities, counties and states. Many examples can be found on the web.

## **Enforcement**

The following enforcement strategies were identified during the two-day interagency strategy meeting:

1. **Warning Tickets for Pedestrians and Bicyclists**  
Issuance of “Warning” tickets for pedestrian and bicycle related infractions, which do not result in an accident. These warnings would target observed behaviors in an attempt to influence these behaviors in a positive way.
2. **Enforcement Locations**  
Install pull outs near intersections with high numbers of pedestrian and bicycle related accidents for police to park their cruisers for enforcement purposes.
3. **Magistrate Review Concerns**  
Traffic magistrates dismiss a large number of tickets, associated fines or both due to some small loophole, an interpretation by the magistrate, or at the discretion of the magistrate based on testimony from the cited person. The Anchorage Police Department reports that approximately 67% of tickets issued get reduced fines or are dismissed altogether. A multi-Agency approach including information from each agency on how a magistrate’s dismissal of tickets and/or fines affects them, and a meeting with the presiding judge to discuss these issues. NHTSA Region 10 has contracted with a judge who travels to northwest states to speak with local judges. Anchorage should consider this program.
4. **Alaska Traffic Manual Changes**  
Changes need to be made to the Alaska Traffic Manual to support citations issued. An example cited at the meeting was a sign that was not the 7 foot height specified in the ATM but was 2 inches lower. As a result, the magistrate dismissed all the citations from that location. While the 7 foot clearance is cited in the ATM, it’s intent is to allow for pedestrian clearance beneath the sign. A small variation in sign height such as that cited above does not compromise the ability of pedestrians to pass beneath the sign. We need to allow more flexibility in the ATM so that these types of interpretations do not occur.
5. **Officer Training**  
Improved training for police officers in filling out the 12-200 Collision report form is needed when it comes to issues such as the at-fault vehicle. It is assumed that vehicle #1 is the at-fault vehicle as officers are supposed to be trained that this is the case. However, with pedestrian or bicycle related accidents, it is unclear if the vehicle at fault (vehicle, pedestrian or bicycle) is being followed correctly.
6. **Accident Reporting of Non Vehicle Related Pedestrian & Bike Accidents**  
Improve accident reporting by officers, coding of even nonmotorized accidents even when a vehicle is not involved. This would include scooters, skis, rollerblades, and other non-traditional non motorized modes of transportation.
7. **Regulations**  
It was discussed that regulations involving scooters, segways, roller blades and roller skis use of the roadway and/or pathways needs to be addressed and clarified. In addition, items such as passing a school bus with flashing lights needs to be clarified when it comes to multi-lane roadways with flush medians such as two way left turn lanes.

**8. Red Light Cameras**

Install red light running cameras at high violation intersections. These can help reduce both serious vehicle-vehicle accidents but also accidents in which the vehicle struck a pedestrian or bicyclist. This action may not only directly benefit non-motorized accidents such as pedestrian and bicycle collisions, but installation of these devices could free up staff to work on other enforcement, and may have a positive influence in reducing driver aggressiveness.

**9. Confirmation Bulbs at Traffic Signals**

Install Confirmation Bulbs (white lights mounted below the signal head showing when the head goes to red, allowing officers to view the red light violation from multiple angles without having to see the face of the signal.) As mentioned under the previous RED LIGHT CAMERA strategy, this action may not directly benefit non-motorized accidents such as pedestrian and bicycle collisions which usually involve multiple vehicles, installation of these devices frees up staff to work on other enforcement, and may have a positive influence in reducing driver aggressiveness. Cost approximately \$300.00 per intersection.

**Engineering**

The following engineering mitigation strategies/countermeasures were discussed at the strategy meeting. These engineering countermeasures should be applied at selected locations as appropriate. They have not been numbered for priority since any of these strategies should be employed as opportunities become available. However, engineering countermeasures which address the predominate accident patterns of right turning vehicles at intersections and mid block pedestrian and bicycle conflicts should receive priority. Not all of these recommendations are intended to be utilized in all situations.

**Enforcement Locations**

Install locations near intersections with high numbers of pedestrian and bicycle related accidents for police to park their cruiser for enforcement purposes. *(Also on Enforcement Listing)*

**Advance Pedestrian Signal Phases**

Implement advance pedestrian phases to allow pedestrian movement prior to vehicular movement, where feasible. An example would be the recently completed midtown trail crossing of Benson Boulevard at A Street. At this location, a pedestrian or bicyclist who pushes the pedestrian button brings up an advance pedestrian phase that allows pedestrians and bikes to cross Benson Boulevard but displays a RED interval to the adjacent northbound dual right turn lane traffic. This phase is only provided when the button is pushed.

**Countdown Pedestrian Signal Timers**

Install countdown pedestrian timers at those large intersections with a high pedestrian accident occurrence or measured conflict, including those with median refuge islands. Locations should be evaluated on an individual basis taking into account conditions at the site. Time pedestrian crossing times greater than minimum at critical locations where capacity is not a constraint.

**Raised Refuge Islands and Pork Chop Islands**

Install raised islands in the center two-way-left-turn lane on selected 5 lane roadways in Anchorage to provide pedestrian refuge.

Install “PORK CHOP” islands between the right turn and thru lanes at large intersections with high right turning movement to help get pedestrians and bicyclists beyond the right turning vehicles and onto a raised island where they can then cross the thru traffic stream during a WALK interval.

### **Restrict Right Turn on Red**

Use “NO RIGHT TURN ON RED” signs at selected intersections with higher numbers of vehicle and pedestrian/bike collisions involving the motorist making a right turn. This solution should only be used at locations sight distance is an issue or where this mitigation will not adversely affect intersection capacity and create other accident patterns.

### **Restrictive Median Treatments**

Install median treatments to effectively prevent mid block pedestrian crossing at locations where adequate crossing opportunity exists at adjacent signalized intersections. Examples are 36<sup>th</sup> Avenue at the transit stops outside of Providence Hospital and UAA Campus, Minnesota Drive between Northern Lights Boulevard and Benson Boulevard, and the Seward Highway between Northern Lights Boulevard and Benson Boulevard.

Review the existing “NO PEDESTRIAN CROSSING” signs at some of these locations need to be reviewed as part of this action. Review them at all other locations in Anchorage to determine if any can be changed.

### **Transit Stop Locations**

Review transit stop location that may encourage crossing major roads at mid-block locations and relocate these stops to locations that are near or at the far side of a signalized intersection, where feasible. If an engineering study determines the midblock crossing is a more suitable crossing than at the intersection, determine if one can be constructed which will provide adequate vehicular gaps, pedestrian or bicycle refuge, chicanes, or grade separations as needed.

### **Contrasting Crosswalks**

Install contrasting crosswalk color for improved crosswalk definition. Maintain the 24” white borders required in the Alaska Traffic Manual.

### **Animated Eyes Active Crossing Devices**

Install “ANIMATED EYES” active crossing devices at selected pedestrian crossing locations to remind pedestrians to look both ways before crossing the roadway. This treatment would only be used at locations where crossing control in the form of a traffic signal with pedestrian detection and phases is not present.

### **Confirmation Bulbs at Traffic Signals**

Install Confirmation Bulbs (white lights mounted below the signal head showing when the head goes to red, allowing officers to view the red light violation from multiple angles without having to see the face of the signal. *(Also on Enforcement Listing)*

### **Red Light Cameras**

Red Light running cameras at high violation intersections. These can help reduce both serious vehicle-vehicle accidents but also accidents in which the vehicle struck a pedestrian or bicyclist. (*Also on Enforcement Listing*)

### **Passive LOOK displays on sidewalks.**

Some studies indicate these markings; installed on the pavement at the roadway crossing point, increase nonmotorized user awareness.

### **Intersection Sight Triangles**

Improve sight triangles at intersections where right of way is available, or where private beautification can be adjusted, where bicyclists ride against traffic, especially right turn corners.

### **Pedestrian/Bicycle Facility Grade Separations from Vehicles**

DOT/PF uses criteria set forth on the Alaska Highway Preconstruction Manual. In accordance with Part 1130.7 of the manual, pedestrian grade separations may be considered when the average daily vehicular traffic is 600 per hour and the crossing pedestrian volume is 150 per hour during the same 8 hour period. Other factors such as safe walking routes to schools, available gaps, vehicle speed, roadway width and sight distance are also considered. Grade separations for safe pedestrian and bicycle crossing of high volume/speed arterials are needed

at a few at key areas of connectivity, where there is concern associated with the present at-grade facilities. Some of these grade separations are already planned, including a separated crossing on Lake Otis at the Campbell Creek Greenbelt and under the Seward Highway at Campbell Creek. Other potential locations being considered include additional roadway overcrossings of the Seward Hwy including the 92<sup>nd</sup> Avenue, International Airport Road, and 68<sup>th</sup> Avenue. Other locations to consider include the Seward Highway and Minnesota Drive in the vicinity of the Northern Lights /Benson Boulevard Couplet and additional crossings downtown in the U-Med area.

### **Pedestrian/Bicycle Only Traffic Signals**

National guidelines contained in the Manual on Uniform Traffic Control Devices (MUTCD) specify warrants for the installation of pedestrian and/or bicycle only traffic signals. Generally, pedestrian traffic signals may be warranted where the traffic volume on a major street is so heavy that pedestrians experience excessive delay in crossing the major street. Pedestrian crossing volumes of at least 100 per hour for a four hour period AND there are fewer than 60 gaps per hour in the traffic stream of adequate length to allow pedestrians to cross and where the pedestrian signal is at least 300 feet away from the nearest traffic signal.

These values of pedestrian and/or bicycle crossing traffic are difficult to obtain. Pedestrian/bicycle crossing signals and associated crossing device may be considered in areas of arterial roadway where a large gap (1/2 mile) exists between adjacent traffic signals or grade separations. These locations should

be limited to midblock type areas where there is little or no conflict with turning vehicles, either to or from the side streets as traffic signals with right turning vehicular movements create additional conflicts with pedestrians and/or bicycles.

### **Advance STOP Bars**

Install advance STOP lines at selected signalized intersections in advance of the crosswalk lines to encourage vehicles to stop prior to arriving at the crosswalk line. These should be limited to locations where there is a particular need, as they may necessitate an increase in ALL RED signal timing.

### **Embedded Crosswalk Lights**

Investigate the use of embedded crosswalk lights, either the recessed type or other technologies such as laser and fiber optic systems that are as not as subject to wear.

### **Expanded use of Bike Lanes**

Consider bike lanes per Chapter 12 of the State DOT/PF Highway Preconstruction Manual on selected facilities to allow both the bicyclist and the driver to better see each other and to accommodate the commuter bicyclist as a vehicle instead of a pedestrian.

### **Curb Ramp Design Modifications**

Consider curb ramp modifications to encourage bike riders using a pathway or sidewalk to stay in the crosswalk at signalized intersections rather than using the cross street curb ramps to cross where they are not as visible to side street traffic.

### **Pedestrian Lighting**

Look at additional pedestrian lighting, where warranted and currently either not in place or of an inadequate light level.

## **Traffic Data Needs**

Other traffic data sources are available beyond the accident data maintained by the Department. This data includes trauma registry and/or hospital emergency room data. For accident analysis purposes, accident locations and details minus any personal occupant data could be used to compare accidents in the Department's accident database with injury data from local hospitals. This data will also aid us in gathering data for pedestrian and bicycle related accidents that occur at locations other than the roadway such as separated pathways. (i.e. Coastal Trail, Chester Creek Greenbelt Trail, Campbell Creek Greenbelt Trail..)

To improve the accuracy of reported accidents involving pedestrians or bicyclists, installation of GPS equipment in police cars such as is occurring at the Anchorage Police Department. This technology will greatly assist in accurately pinpointing the location all accidents as well as pedestrian and bicycle related accidents, which often occur at mid-block locations.

## **Funding Sources**

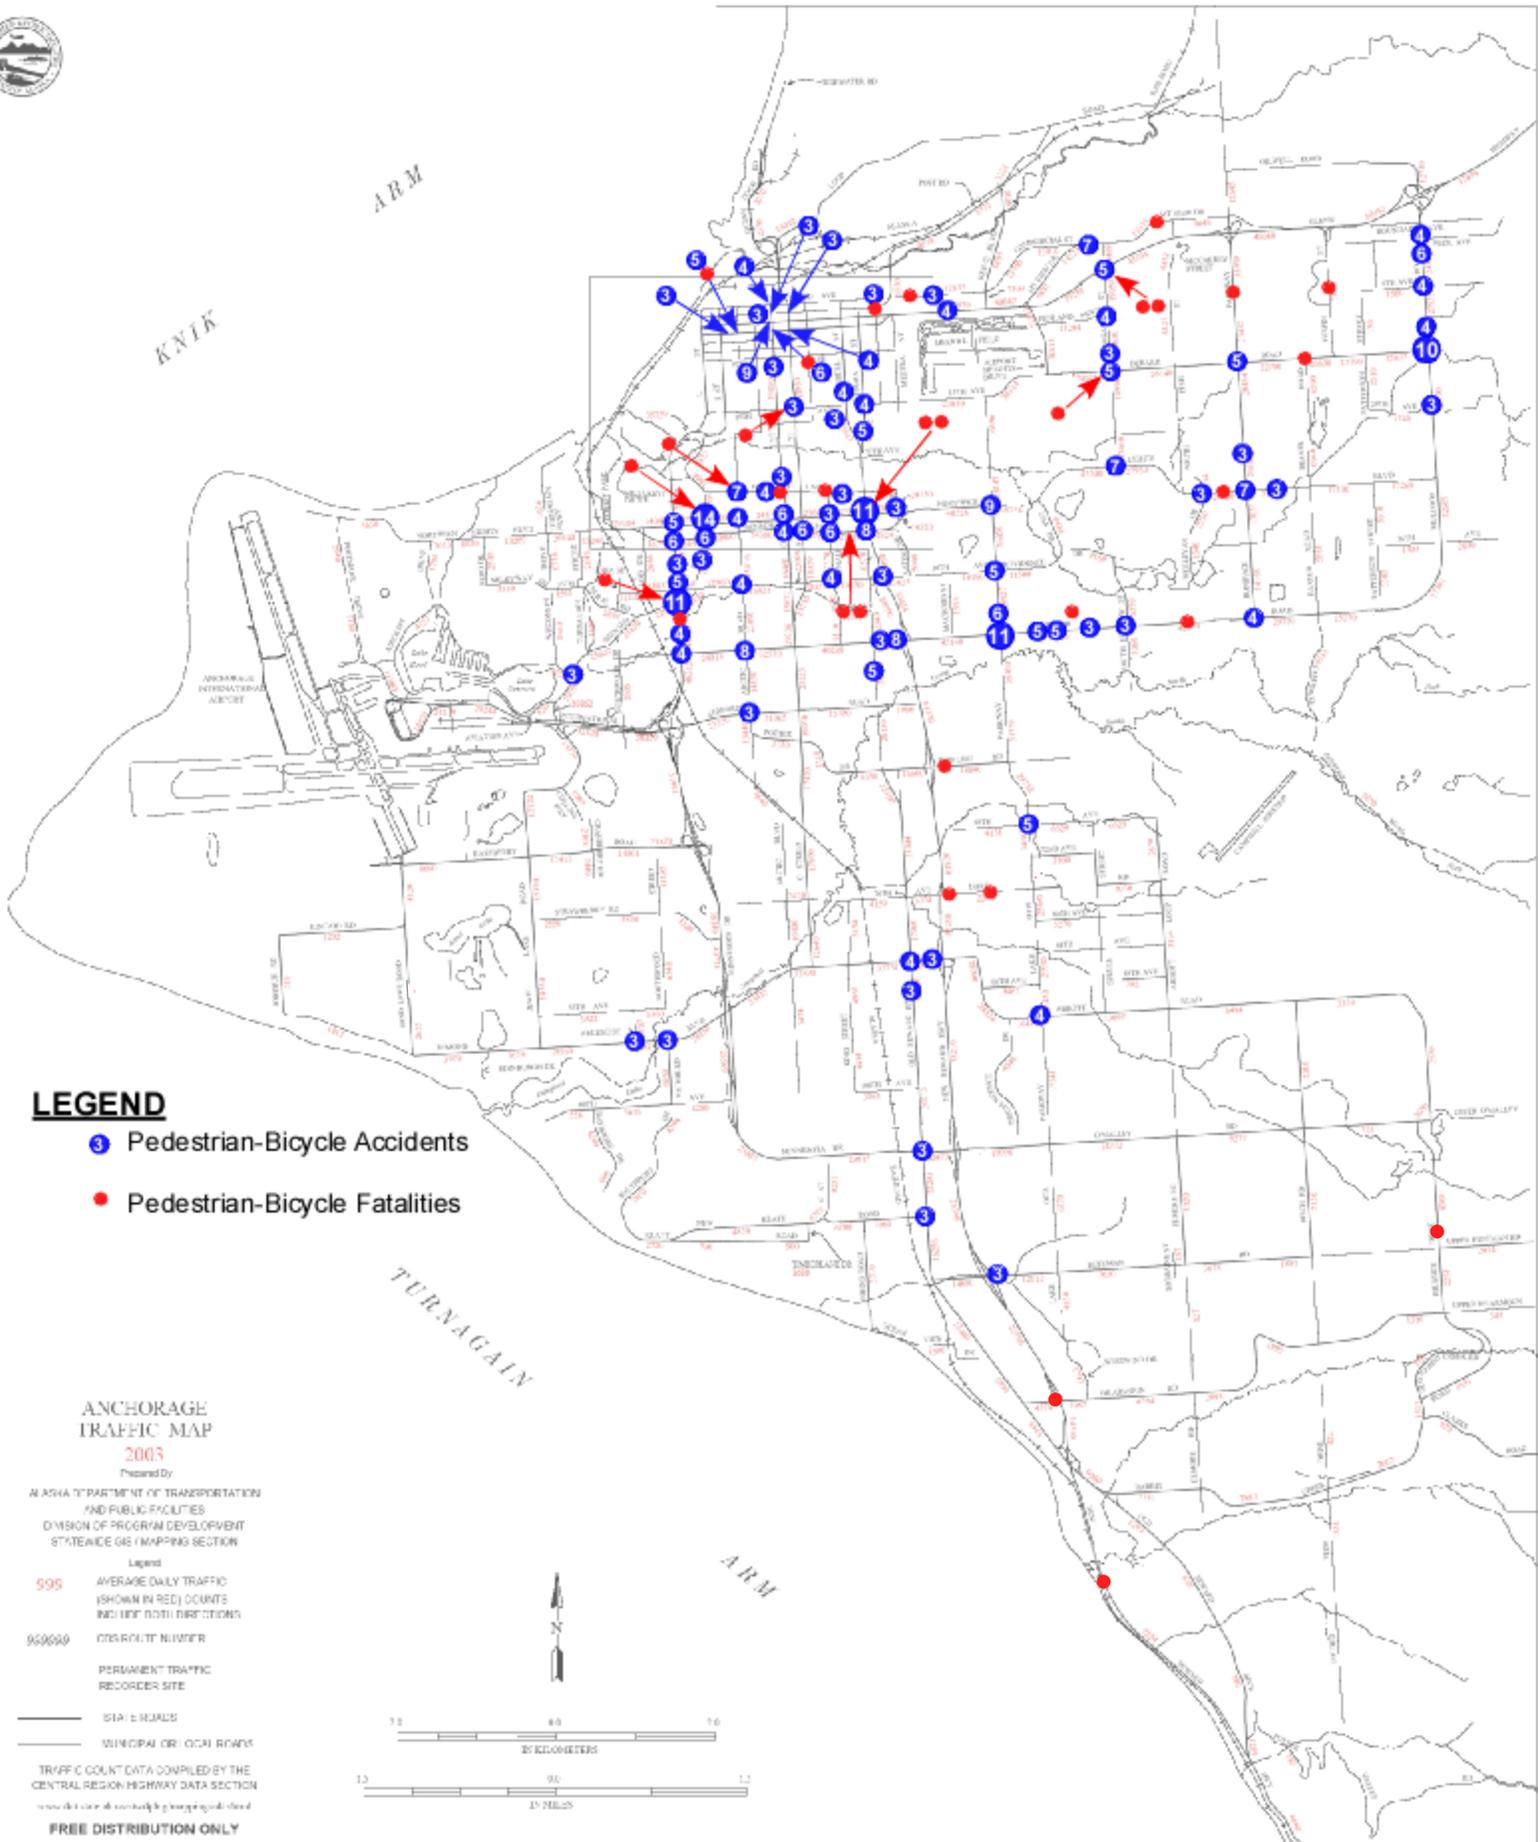

In order to implement these recommendations, funding sources will need to be identified. Funding for the education, enforcement and engineering activities may be available from the following sources:

- Highway Safety Improvement Program (HSIP) Funds (Mostly for “Engineering” component.)
- Alaska Highway Safety Office (Enforcement or Education components), Section 402 Grant requests, and Section 154 \$4 million for DUI enforcement.
- Municipality of Anchorage, Community Service Patrol – for on street pedestrian drinking related problems, issues.
- National Highway Traffic Safety Administration (NHTSA) Funding (Not otherwise identified)
- Local Municipality of Anchorage (MOA) Funding (AMATS allocation, Bond Funds, etc.)

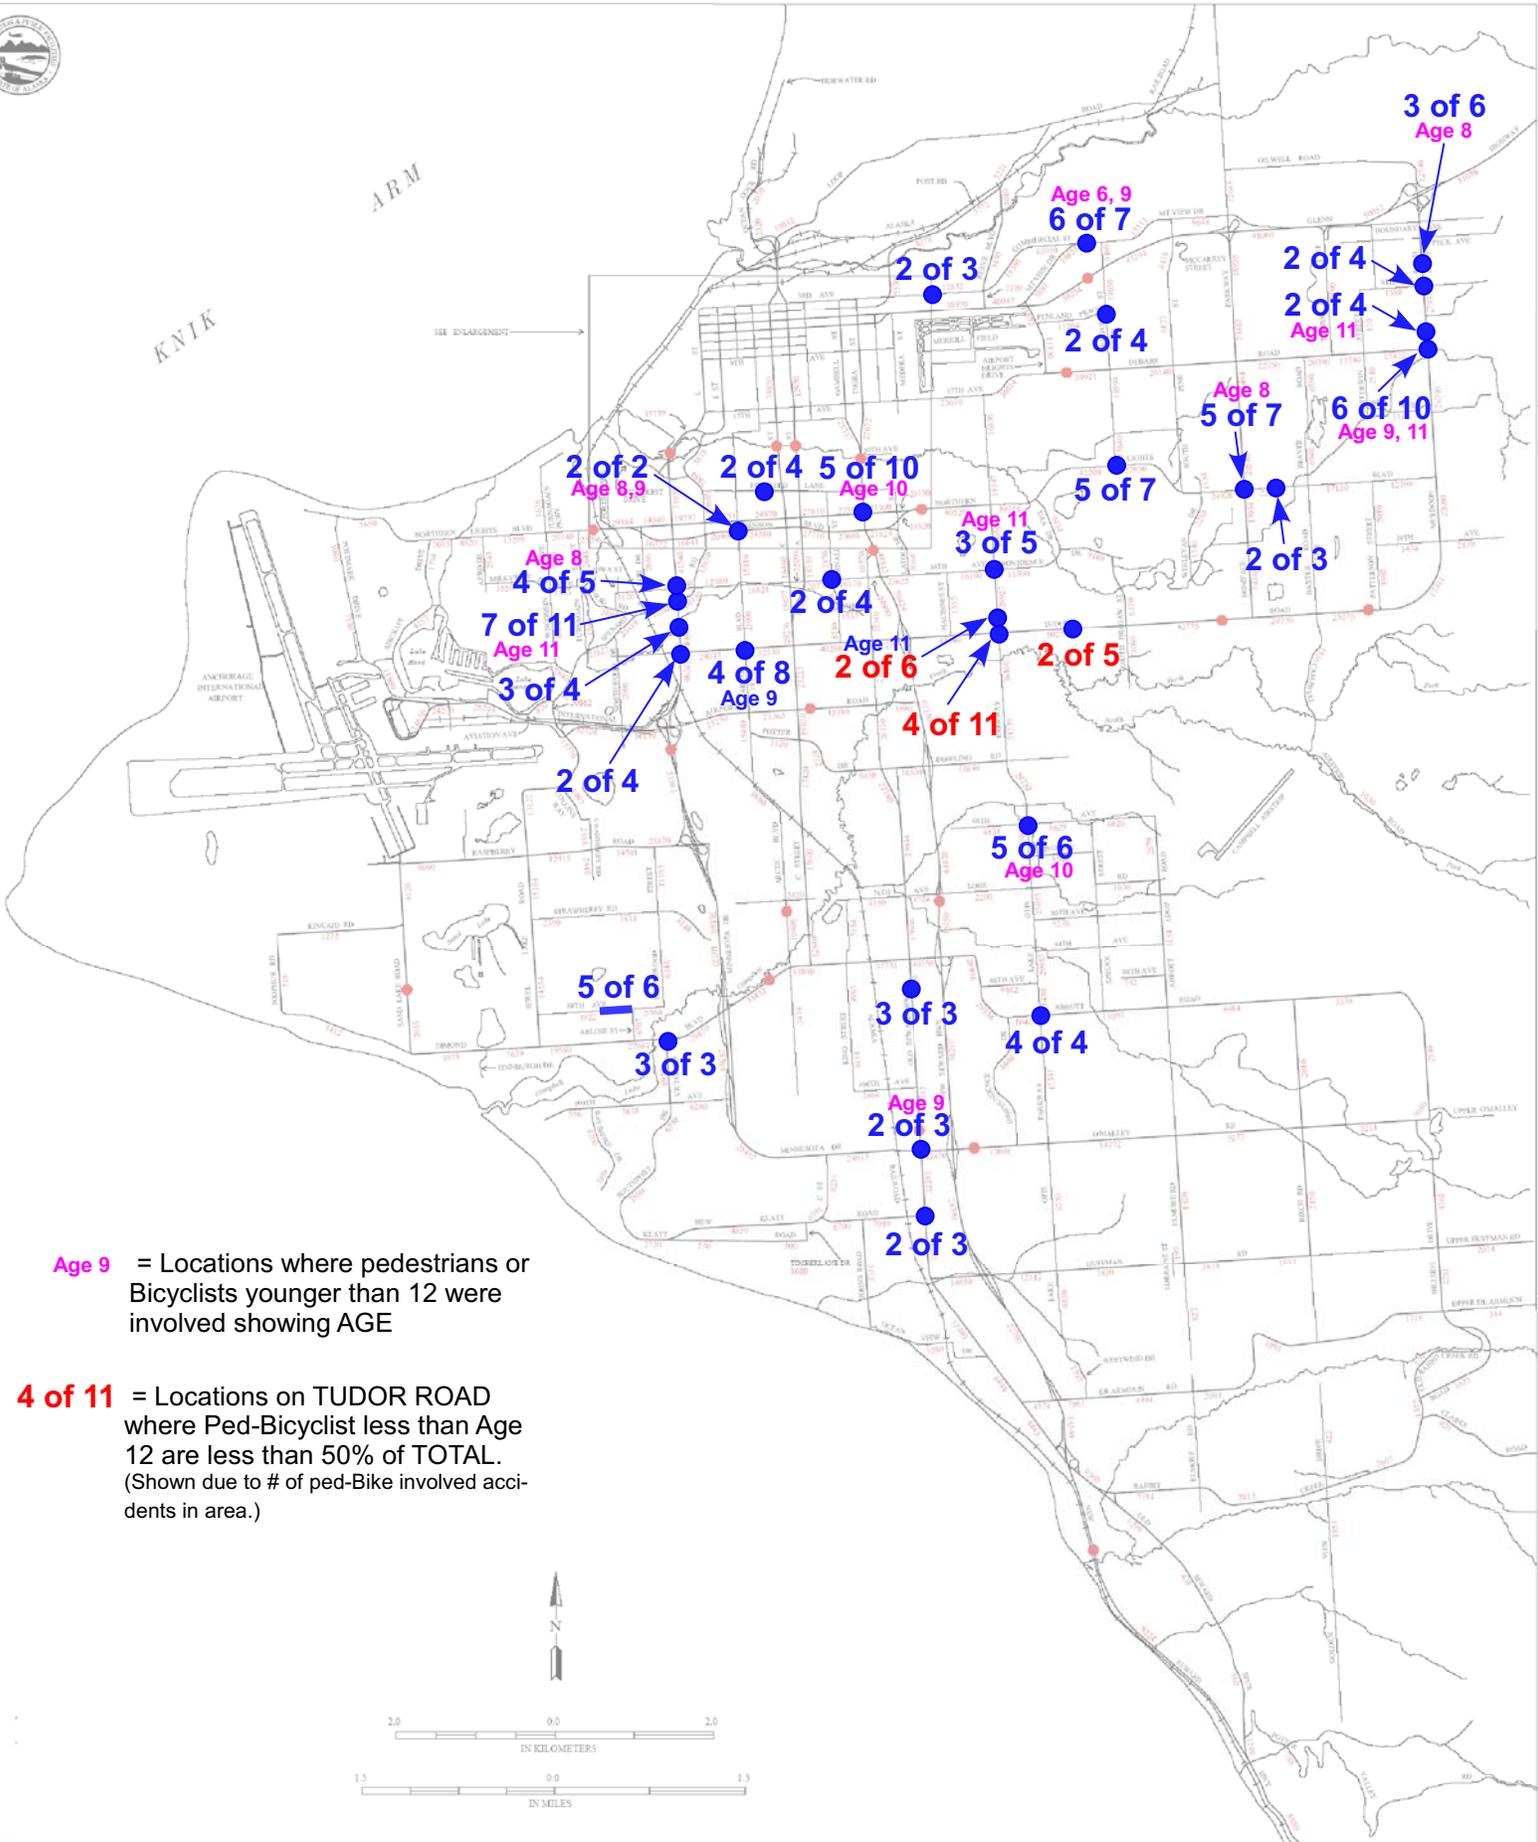

This is not intended to be an all-inclusive listing. Other support could take the form on “in-kind” support from various agencies as part of their normal operations or from other pedestrian and/or bicycle advocacy groups.

## **Appendix A**

### **Listing of Pedestrian & Bicycle Related Projects by DOT/PF: 2001-2007**

## **Pedestrian and Bicycle Crashes Collisions with Motor Vehicles in Anchorage**

### *Listing of Pedestrian and Bicycle Related Projects by DOT/PF, 2001-2007*

#### **Upcoming Projects with Pedestrian & Bicycle Safety Elements Included – 2006-2007**

1. HSIP: Debarr Road: Boniface Parkway to Beaver Place Safety Improvements, 2007.  
Project proposes to install raised island Channelization at regular intervals along the 5-lane segment to provide pedestrian refuge.
2. HSIP: 5th Avenue & C Street Safety Improvements, 2007.  
Improvements for pedestrians crossing C Street at 5th Avenue to make them more visible to motorists turning left.
3. HSIP: Lucille Street and Spruce Street Safety Improvements, 2007. Includes improvements to pedestrian pathway crossing of Lucille Street at Spruce Street.
4. HSIP: 7<sup>th</sup> Avenue @ C Street Traffic Signal, 2006. Installation of traffic signal complete with pedestrian crosswalks and indications.  
HSIP: L Street: 5<sup>th</sup> Avenue to 13<sup>th</sup> Avenue Channelization Improvements, 2006. Includes curb bulbs at several intersection to improve pedestrian crossing by reducing crossing distance and making pedestrians more visible to motorists.
5. HSIP: 13<sup>th</sup> Avenue at Gambell Street Channelization Improvements, 2006. Includes pedestrian crossing improvements at this high pedestrian crossing intersection.
6. HSIP: 10<sup>th</sup> Avenue @ E Street and C Street Channelization Improvements, 2006. Includes curb bulbs these intersection to improve pedestrian crossing by reducing crossing distance and making pedestrians more visible to motorists.
7. HSIP: Son of Downtown Curb Bulb Project, 2007. Includes curb bulbs at several intersection to improve pedestrian crossing by reducing crossing distance and making pedestrians more visible to motorists.
8. Wasilla/Fishhook Road Rehabilitation: Bogard Road to Seldon Road, 2006-2007. Includes construction of pathway paralleling Wasilla/Fishhook Road between Bogard Road and Seldon Road.
9. Seward Highway: MP 0-8, Phase II, 2006-2007. Includes construction of pathway paralleling the Seward Highway and a pedestrian underpass.
10. AMATS Ship Creek Trail, Phase III, 2006-2007. Trail construction from near Anchorage Trade Center eastward to the west side of Post Road. Includes a major structure overcrossing Alaska Railroad.
11. AMATS: Ship Creek Trail, Phase IV, 2006-2007. Construct trail in vicinity of, and concrete tunnel under, Post Road.
12. Palmer: Chugach Street Rehabilitation, 2006-2007. Includes construction of sidewalks parallel to Chugach Street between Fireweed Avenue and Outer Springer Loop Road.
13. Parks Highway: MP 41-44 Crusey TO Lucus, 2006-2007. Includes construction of pedestrian facilities parallel to and crossing the Parks Highway in Wasilla.
14. Palmer Urban Revitalization (TCSP), 2006-2007. Construct a paved pathway along the railroad right-of-way from the Old Glenn Highway Bridge through Palmer to the Alaska State fairgrounds.

15. Girdwood Roads (SEC 330 EMK, SEC 115 ERMK) AK021, 2007. Includes Hightower Pedestrian Trail along Hightower Road from Post Office site to school site; Lindblad Avenue; and Holmgren Place.
16. HSIP Old Glenn Highway: Glenn Highway to Matanuska River Bridge, 2007. Includes installation of pathway between Gulkana Street and the Matanuska River Bridge and a 20 MPH flashing school zone and crossing at Academy Charter School.

### **Current and Recent Trail and/or Pedestrian Bicycle Related Projects – 2001-2005**

17. Midtown Segment of the North-South Trail: A Street: Tudor Road to Fireweed Lane, 2005. Construction of pathway paralleling A Street between Tudor Road and Fireweed Lane connecting pathway segments south of Tudor on C Street and north of Fireweed Lane on A Street.
18. Muldoon Road Landscaping and Pedestrian Improvements: Phase I and II, 2003-2005. Construction of pathway facilities parallel to Muldoon Road between 36<sup>th</sup> Avenue and Debarr Road.
19. Ship Creek Trail, Phase II, 2004-2005. Construction of trail paralleling Ship Creek between Post Road and Mt. View with a grade separation at Reeve Boulevard.
20. Campbell Creek Trail, Phase I, 2003. Construction of Campbell Creek Trail between Lake Otis Parkway and the Old Seward Highway connecting to the Campbell Creek greenbelt trail at the Old Seward Highway.
21. Ship Creek Trail, Phase I, 2002. Construction of pathway paralleling Ship Creek between North C Street and Warehouse Avenue.
22. Campbell Creek Trail Connection to Tudor Road Crossing, 2002. Construction of Campbell Creek Trail between the Seward Highway and the Old Seward Highway with grade separation at International Airport Road.
23. Kenai Spur Road Unity Trail and Soldotna School Trail, 2002-2003. Construction of trails and associated facilities paralleling the Kenai Spur Road between Kenai and Soldotna.
24. Business Boulevard Pedestrian Safety Improvements 2001. Installation of pedestrian facilities along Business Boulevard in Eagle River.
25. Parks Highway Pedestrian Bridges, Little Willow Creek, Kashwitna River and Sheep Creek, 2001-2002. Construction of pedestrian bridges and connecting pathways parallel to the Parks Highway at these three bridges.

### **Current and Recent Highway Projects with Major Trail Facilities – 2001-2005**

26. C Street: Potter Drive to Dimond Boulevard 2002. Includes pedestrian pathways, grade separation at Campbell Creek, connection to Campbell Creek Greenbelt Trail and crossing facilities.
27. C Street Extension: Dimond Boulevard to O'Malley Road 2005-2006. Includes pedestrian pathways, grade separation at Minnesota Drive/O'Malley Road and crossing facilities.
28. Abbott Loop Extension, 2006. Includes parallel pedestrian pathways and crossing facilities.
29. Sterling Highway Rehabilitation: Homer, 2004. Includes pedestrian crossings and refuge islands.
30. Sterling Highway, Soldotna Urban, 2005-2006. Includes major pedestrian facility on Kenai River Bridge and trail connections to Soldotna Urban and Kalifornsky Beach Road.
31. Old Glenn Highway: North Eagle River to Fire Lake, 2004. Includes extension of pathways and 20 MPH flashing school zone.

32. DeArmoun Road Rehabilitation, 2003-2004. Includes construction of trail parallel to DeArmoun Road with connections to the Seward Highway and Elmore Road/South High School.
33. Knik/Goose Bay Road Rehabilitation and Pathway, 2003-2004. Includes installation of parallel pathway along Knik/Goose Bay Road.
34. Parks Highway: MP 67-72, Whites Crossing to Willow, 2003-2004. Includes extension of pathway parallel to the Parks Highway and grade separation in Willow.
35. Seward Port Avenue Rehabilitation & Harbor Pedestrian Pathway, 2002-2003. Includes construction of pedestrian facilities around the Seward Small Boat Harbor.
36. Talkeetna Spur Road Rehabilitation, 2002-2003. Includes construction of parallel pathway between the Parks Highway junction and Talkeetna.
37. Dowling Road: Old Seward Highway to Lake Otis Parkway, 2003-2005. Includes construction of continuous pathways on both side of Dowling Road with connections to the Campbell Creek Greenbelt Trail and the Lake Otis Parkway Trail.
38. AIA Landside Improvements, Phase III, 2003. International Airport Road at Jewel Lake Road. Provide signalized pedestrian crossing and extend pathway to bus stops and recreational facility at Conners Bog.
39. Parks Highway: MP 57-67, 2001-2003. Includes construction of parallel pathway along the Parks Highway between MP 57-67.
40. Palmer/Wasilla Highway Extension: Knik/Goose Bay Road to Parks Highway, 2001-2003. Includes installation of parallel pathway along the new Palmer/Wasilla Highway Extension and pedestrian crossing facilities at Knik/Goose Bay Road.
41. Boniface Parkway Rehabilitation: Elmendorf Air Force Base to Debarr Road, 2001-2003. Includes improvements to pathways paralleling Boniface Parkway between the EAFB gate and Debarr Road.
