Current National Drought Summary (December 31, 2024)

Precipitation fell across much of the U.S. this week, with heavier amounts (> 1 inch) falling across large portions of the Northwest U.S. and from south-central U.S. to the Ohio Valley. Coastal areas of the Pacific Northwest, from Washington to northern California, reported weekly rainfall totals between 2 to 15 inches, while precipitation totals of 2 to 10 inches were reported in areas from eastern Texas to Alabama, as well as parts of the Ohio Valley and the Southeast. Above-normal precipitation supported drought improvements across large portions of the South and Midwest, and in parts of the Pacific Northwest, Midwest and Southeast. Conversely, weekly precipitation totals were below normal in areas of the southwestern U.S., Mid-Atlantic and Northeast. Drought and abnormal dryness were expanded or intensified in portions of the Southwest and in small pockets of the High Plains. Temperatures were above normal across much of the U.S. this week. Areas along the Northern Tier, from northern portions of the West, to the Midwest observed temperatures 10 to 25 degrees above normal. Below-normal temperatures were reported across northern portions of the Northeast, from northern New Jersey to Maine, where departures were up to 5 degrees F below normal this past week. Below-normal temperatures were also observed in small pockets of the Southeast this week.
