Public Code

I have worked heavily on improving and adding to the Brussels Automatic Code for Characterizing High accuracy Spectra (BACCHUS). This code is designed to derive the stellar parameters and chemical abundances from moderate-to-high resolution ($R \sim 11,000$ -150,000) stellar spectra. The code can be found [here](#). It is also on the Astrophysics Source Code Library (ascl:1605.004).

Publications

As of 05/2023, my publication record includes 101 publications, abstracts, or public code, of which 65 are peer-reviewed refereed publications in high-impact journals. My publications have received over 1750+ citations (hindex=31; up from 14 in 2018).
