# CGM: Repository of Information

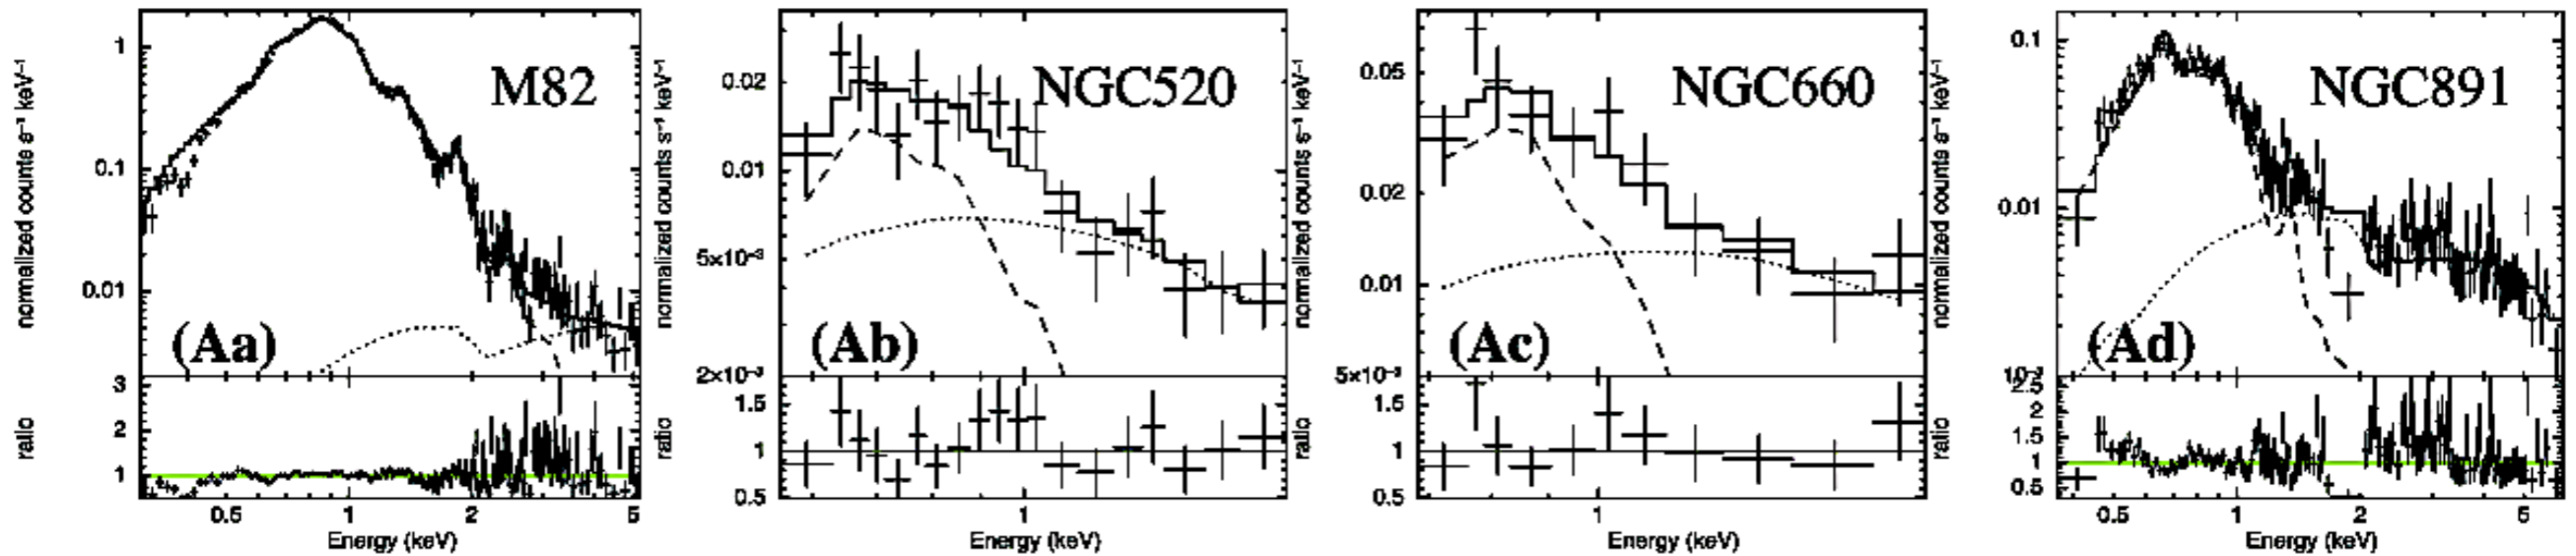

Gas ??

Outflows

# Motivation

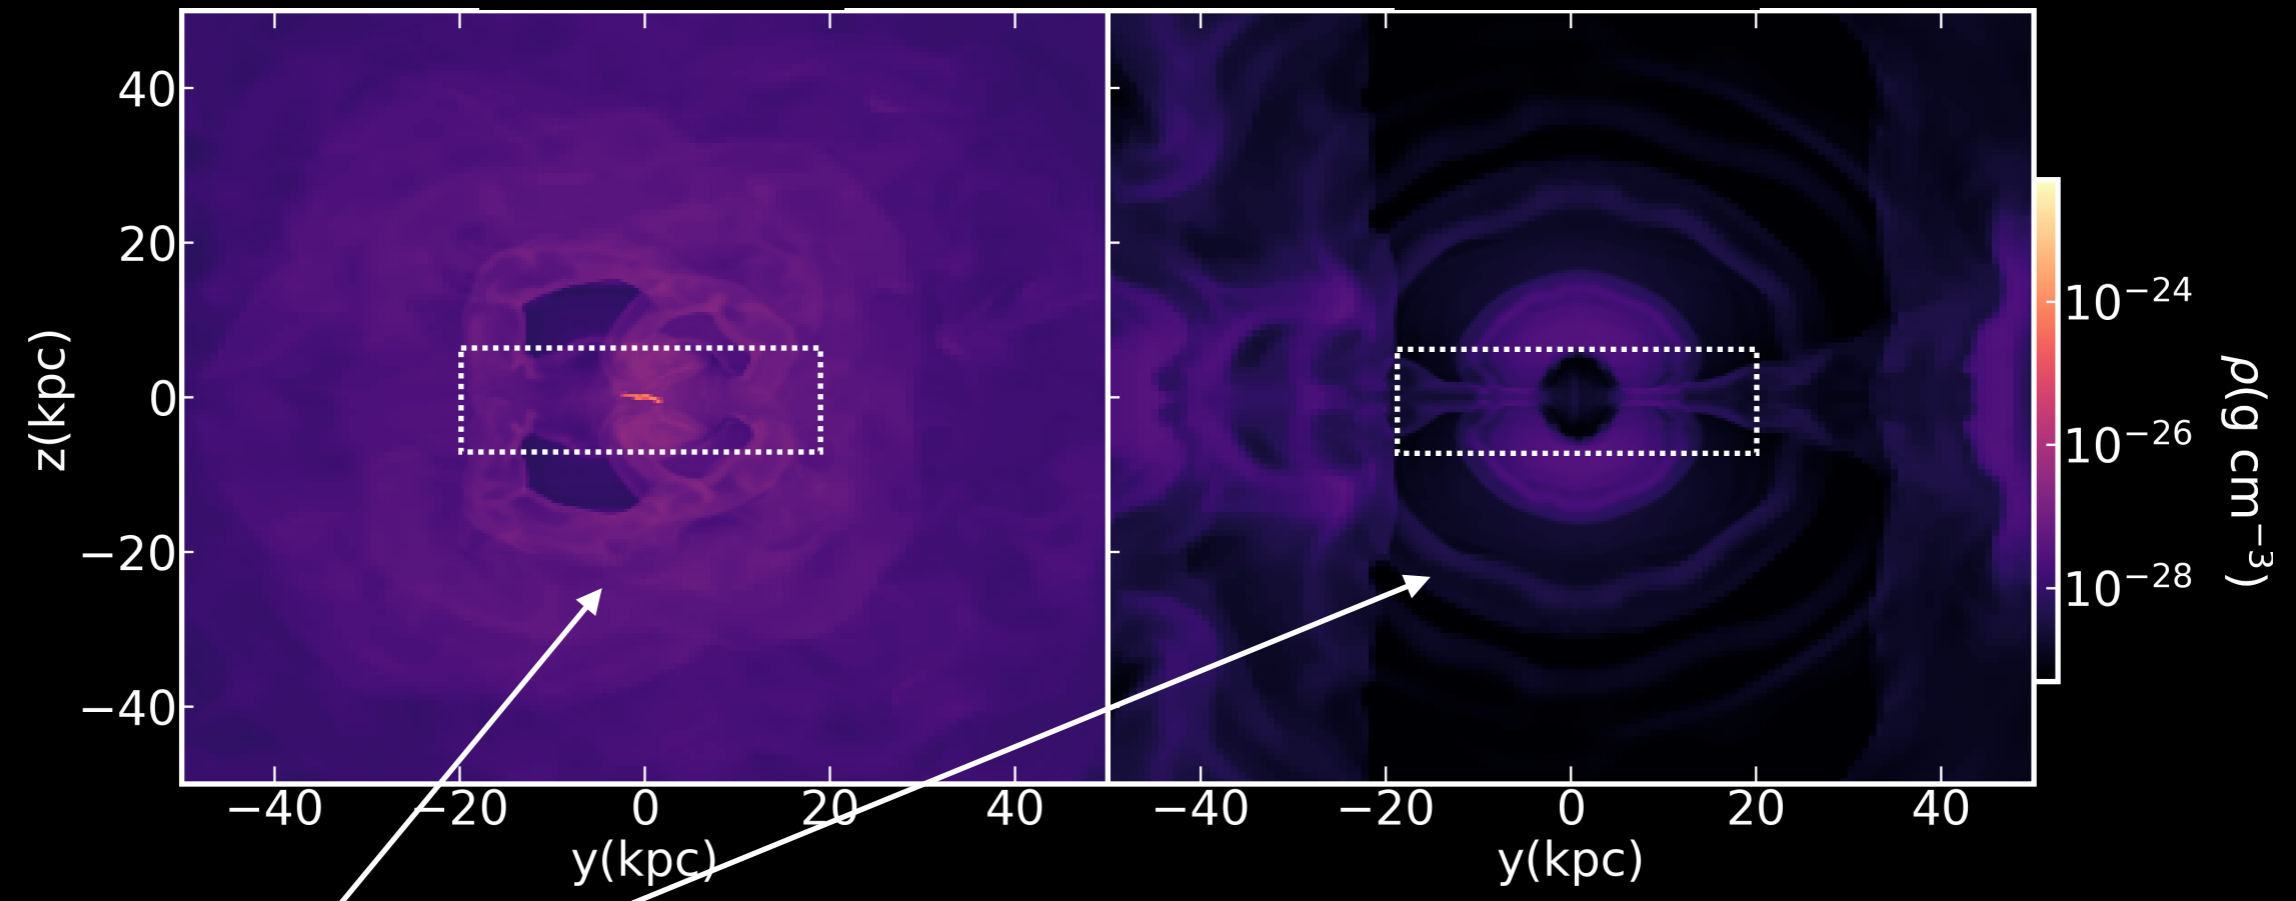

Jiang-Tao Li and Q. Daniel Wang, 2013,  
MNRAS, 428, 2085

A number of observations of CGM already exists, thanks to Chandra and XMM.

Observers use 1-T and 2-T models to estimate physical properties of the underlying plasma.

But gas is multiphase!  
-t is diff

**High SFR**

# Conclusions

- Star formation creates multiphase distribution of gas in galaxy.
- Using one or two representative temperatures for plasma may not be entirely accurate.
- Log-Normal temperature distribution can give a better fit to the spectra.
