

Food and Agriculture Organization
of the United Nations

The state of the world's land and water resources for food and agriculture (SOLAW)

Systems at breaking point

Mr Lifeng Li

Director, FAO Land and Water Division

9 December 2021, Rome

SOLAW 2011 and 2021

The Context

We need to
produce

more food, feed and
biofuel than we
did in 2012

Around

billion people
are impacted by
water scarcity

The Status of agricultural land

Land-use class change, 2000–2019 (million ha)

Land-use class	2000	2019	Change
Land under permanent meadows and pastures (a)	3 387	3 196	-191
Cropland (arable land and permanent crops) (b = b1 + b2)	1 493	1 556	+63
- Arable land (land under temporary crops) (b1)	1 359	1 383	+24
- Land under permanent crops (b2)	134	170	+36
Agricultural land (total of cropland and permanent meadows and pasture) (C = a + b)	4 880	4 752	-128
- Land area equipped for irrigation	289	342	+53
Forest land (land area > 0.5 ha with trees > 5 m + 10% canopy cover)	4 158	4 064	-94
Other land	3 968	4 188	+220

22%

The State: The interconnected systems of land, soil and water are stretched to the limit

Level of water stress due to the agricultural sector by basin, 2018

The State: Current patterns of agricultural intensification are not proving sustainable

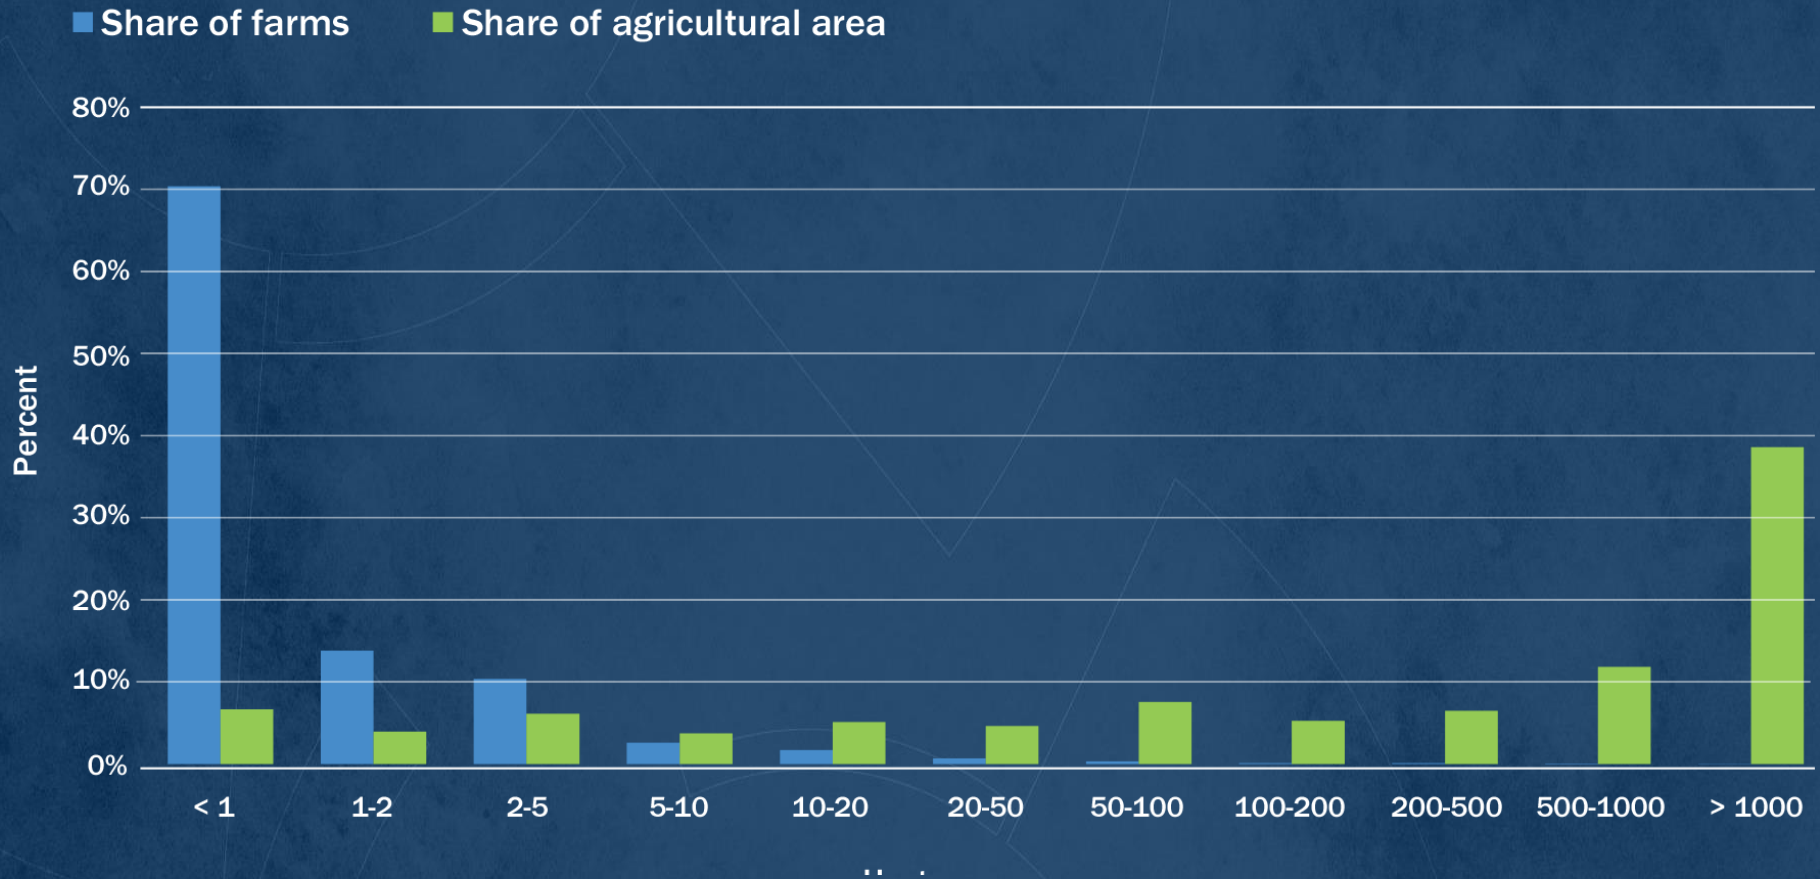

Land-degradation classes based on severity of human-induced pressures and deteriorating trends, 2015

Source: Coppus, forthcoming, modified to comply with UN, 2021.

The State: Farming systems are becoming polarized

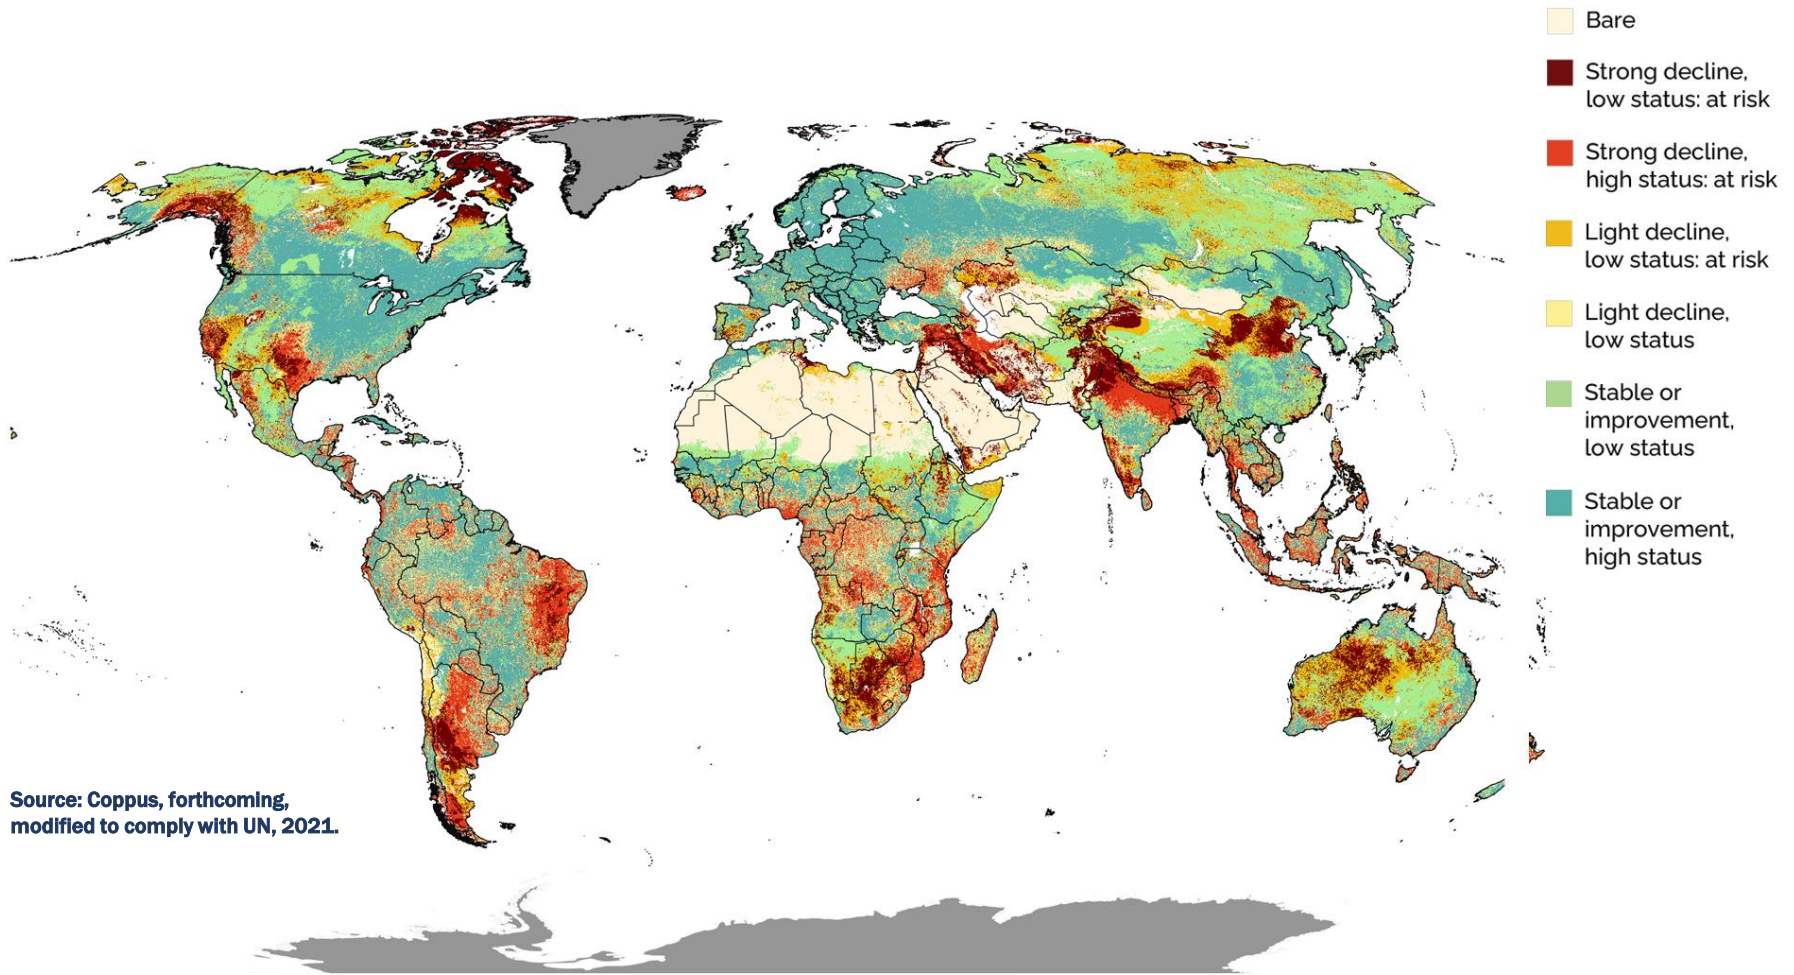

Global distribution of farms and farmland by land size class, 2010

Source: Lowder, Sánchez and Bertini, 2021.

The Challenge: Future agricultural production will depend upon managing the risks to land and water

Regions at risk based on status and trends of land resources, 2015

Source: Coppus, forthcoming, modified to comply with UN, 2021.

The challenge: Land and water resources will need safeguarding

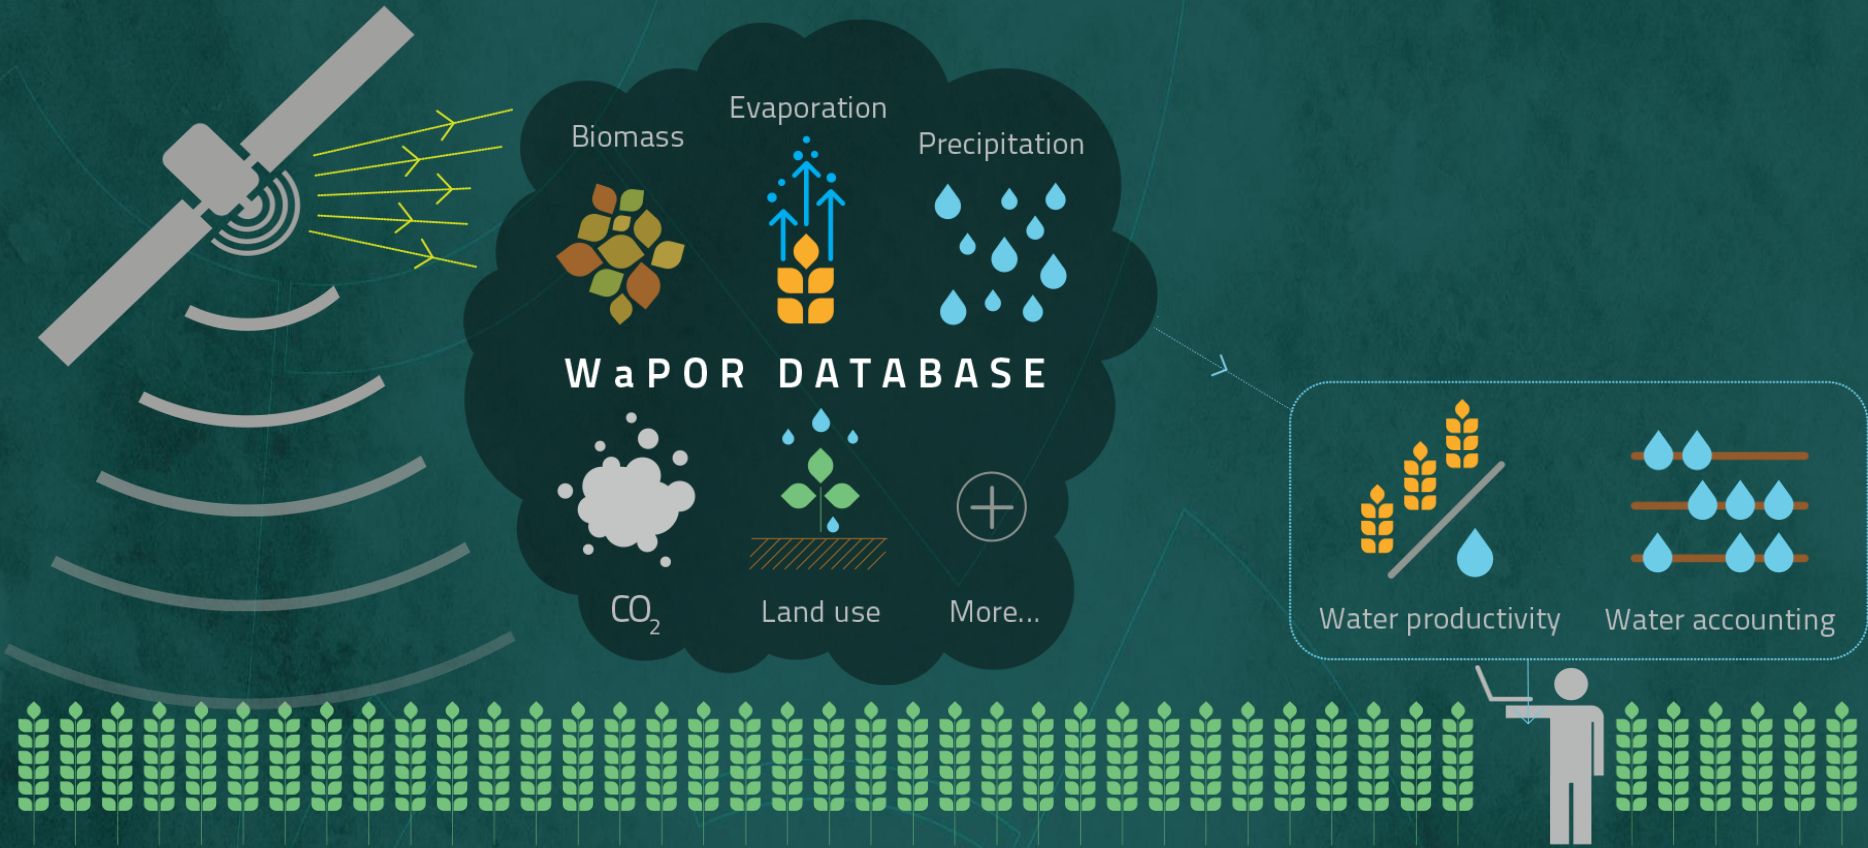

The responses: Land and water governance has to be more inclusive, adaptive and effective.

The responses: integrated solutions need to be planned and implemented at all levels

The responses: Technical and managerial innovation can be targeted to address priorities and accelerate transformation

The responses: agricultural support and investment can be redirected towards social and environmental gains derived from land and water management.

No “one size fits all” solution exists, but a “full package” of workable solutions is available

Food and Agriculture Organization
of the United Nations

**Over 95% of food is produced on Land
and begins with Soils and Water.**

**Let's work together to produce more with
less and safeguard these resources for
the future.**

Thank you !
