

# Weekly Summary of Vermont COVID-19 Data

Reflecting cases identified between  
March 5 – July 15, 2020

Date published: July 17, 2020. This summary will be updated every Friday.

# Common Terms and Data Sources

This document contains information about people who have tested positive for COVID-19 in Vermont. You will find data presented in a few different ways throughout this document:

- **Count:** the number of people who have tested positive for COVID-19 (overall or in a particular group)
- **Rate:** the number of people who have tested positive for COVID-19 in a particular group, divided by the total number of people in that group. Using rates allows for more direct comparisons between groups.
- **Growth rate:** a measure of the percent change in COVID-19 cases over time; this tells us how quickly or slowly the disease is spreading in Vermont
- **Week:** for the purposes of this document, “this week” is defined as July 8 through July 15

For geographic information, please see the [COVID-19 Data Dashboard](#) or [Town Map](#). For more information on data sources, please see our [Data Notes](#) document.

# COVID-19 in Vermont

An overview of our number of cases and laboratory testing to date.

# Total Number of Cases in Vermont: 1,325

80 The daily number of COVID-19 cases in Vermont peaked on April 3.

# Most counties have reached a plateau in the number of new cases.

Growth over time by county (n=1,320)

# Percent of positive COVID-19 tests may indicate how prevalent the disease is in the population.

Vermont Department of Health

\*Not a stable estimate due to small numbers. There were 8 total tests and 1 was positive.

## Percent Positive to Date

## Percent Positive This Week (July 8 – July 15)

<b>8,168</b> People Tested this Week	<b>10,602</b> Tests this Week
<b>79,040</b> People Tested to Date	<b>96,179</b> Tests to Date

The **number of people tested** reflects the number of individual people who have had confirmatory testing for COVID-19 in Vermont. Each person is only counted once. The **number of tests** reflects the number of specimens that have had confirmatory for COVID-19 in Vermont. This number may include multiple specimens for one person, the same person tested multiple times, etc. Neither of these numbers include serology testing.

# Case Demographics

Who has been impacted by COVID-19 in Vermont?

**Rates of COVID-19 are disproportionately high among Vermonters 80 years and older.**

Rate per 10,000 Vermonters

**Females and males have similar rates of COVID-19.**

Rate per 10,000 Vermonters

**There are differences in age and sex of Vermonters with COVID-19.**

Rates of COVID-19 by Age Group for Females and Males per 10,000 Vermonters

**White Vermonters represent the majority of COVID-19 cases. African American Vermonters have the highest rate.**

Rate per 10,000 Vermonters

**Non-Hispanic Vermonters represent the majority of COVID-19 cases. Hispanic Vermonters have the higher rate.**

Rate per 10,000 Vermonters

**Other Race** includes people who identify as two or more races, or a race other than White, Asian, African American or Black, and American Indian or Alaskan Native.

Note: Race is unknown in 3% of cases (n = 35) and ethnicity is unknown in 10% of cases (n = 125).

# Approximately 58% of people\* with COVID-19 have a pre-existing condition.

\*of the 1,022 people that the Health Department has pre-existing condition data for.

Condition	Count	Percentage
Heart Disease	131	13%
Chronic Lung Disease (includes asthma and COPD)	140	14%
Chronic Liver Disease	9	1%
Chronic Kidney Disease	27	3%
Current/Former Smoker	234	23%
Diabetes	100	10%
Immunocompromised Condition	48	5%
Neurologic Condition/Intellectual Disability	34	3%
Other Chronic Condition**	284	28%
Pregnant	9	1%

**46% of people with a pre-existing condition have two or more conditions.**

\*\*Not mutually exclusive, includes things like arthritis, thyroid conditions, multiple free text entries.

The Health Department has information about pre-existing conditions in 77% (1,022) of 1,325 total COVID-19 cases.

**Prevalence of select conditions in COVID-19 patients and Vermont adults.**

Data Source: Cardiovascular disease and diabetes, BRFSS 2018 annual report. Chronic lung disease, 3-4-50 Community profile (2016-2017 BRFSS).

**COVID-19 patients with pre-existing conditions tend to be older than those without pre-existing conditions.**

**Prevalence of pre-existing conditions is approximately equal between female and male COVID-19 patients.**

Vermont Department of Health

**A higher percentage of COVID-19 patients with pre-existing conditions have been hospitalized than those without pre-existing conditions.**

## Number of **New Health Care Worker** and **All Cases** by Day

**1 in 6** Vermonters with COVID-19 are health care workers.

**Health care workers** with COVID-19 tend to be younger than non-health care workers with COVID-19.

**7 in 10** health care workers with COVID-19 are **female**.

**33%** of health care workers with COVID-19 are associated with an **outbreak**.

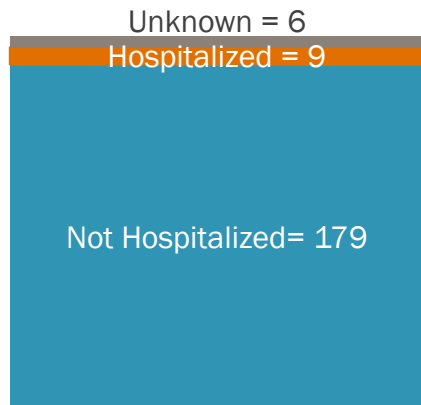

**White Vermonters represent the majority of health care workers with COVID-19 .**

**Most health care workers with COVID-19 have symptoms.**

**Most health care workers with COVID-19 are not hospitalized.**

There are no reported deaths among health care workers.

Sign or Symptom among Health Care Workers with COVID-19	Percent of Symptomatic Cases
Cough	73%
Fatigue	65%
Headache	60%
Loss of Smell or Taste	54%
Muscle Pain	52%
Runny nose	47%
Chills	44%
Fever	42%

# Clinical Course

What symptoms have Vermonters experienced? How many have been hospitalized? How many have died?

The day **symptoms start** is important to know when people with **COVID-19** become infectious.

Illnesses occurring in this window may not be reported yet; median reporting lag = 6 days 

Note: Date of symptom onset is not always known.

**14 days**  
Average illness duration

Sign or Symptom	Percent of Symptomatic Cases
Cough	71%
Fatigue	67%
Headache	53%
Muscle Pain	52%
Fever	51%

**Most Vermonters with COVID-19 are not hospitalized.**

**16%**  
Of those hospitalized were on a ventilator

**34%**  
Of those hospitalized were in the ICU

**9 days**  
Average hospital stay (range: 0-43 days)

**Vermonters 80 years and older are more likely to be hospitalized for COVID-19.**

Rate per 10,000 Vermonters

**White Vermonters represent a majority of hospitalized COVID-19 cases.**

**Hospitalization rates by race are similar.**

Rate per 10,000 Vermonters

Please note 5 hospitalized persons are missing race information.

\*The number of Asian, Black, and persons in the other race category is less than 5.

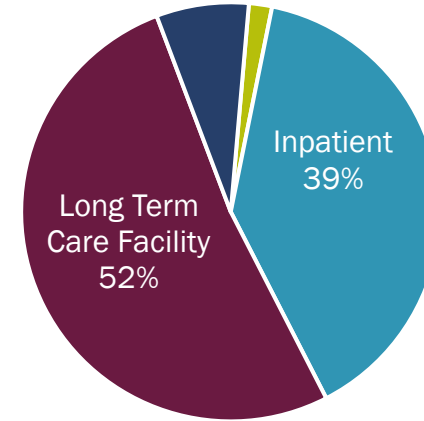

**Vermonters 80 years and older** have higher rates of COVID-19 death than other age groups.

Rate per 10,000 Vermonters

Most COVID-19 deaths occurred in an **inpatient hospital setting** or a **long-term care facility**.

Out of state facility 5% At Home 2%

**Males and females** have similar rates of COVID-19 death.

Rate per 10,000 Vermonters

**White Vermonters** represent a majority of COVID-19 deaths. **Death rates by race are similar.**

Rate per 10,000 Vermonters

Note: No deaths have identified as Hispanic or Latino.

# Outbreaks

How is COVID-19 impacting group settings?

# Outbreaks can occur in many types of places. Here is what outbreak means in these places:

## Community Settings

3 or more COVID-19 cases involving more than one family or household where the cases:

- have an illness start date or positive test within 14 days, and
- are linked through contact or location, and
- are not linked to another outbreak, and
- there is no other more likely source of exposure.

## Educational Settings

2 or more COVID-19 cases among students or teachers/staff with known connections in the educational setting, where the cases are connected by:

- having an illness start date or a positive test within 14 days, and
- not living together or having close contact with each other in another setting, and
- there is no other more likely source of exposure.

## Congregate Care or Living Settings\*

One resident or staff member with COVID-19, and one or more residents or staff with whom they had contact with respiratory illness.

**or**

Two or more facility residents and/or staff with an illness start date or positive test within 14 days.

\*Examples include long-term care and other residential care facilities, correctional facilities and homeless shelters.

## Workplaces

2 or more COVID-19 cases among employees at the same workplace, where the cases are connected by:

- having contact with each other, and
- an illness start date or positive test within 14 days, and
- not living together or having close contact with each other in another setting, and
- there is no other more likely source of exposure.

**31%** of COVID-19 cases are associated with an outbreak

**304** cases among residents

**103** cases among facility staff

## Outbreaks

**7 Active**

10 Resolved\*

\*Outbreaks where it has been >28 days since the last known exposure to a confirmed COVID-19 case, with no new cases OR 2 rounds of negative facility-wide testing one week apart.

# Vermont COVID-19 Cases Associated with an **Outbreak** Over Time

90

# Vermont COVID-19 Deaths Associated with an **Outbreak** Over Time

4

## 12 of 17 outbreaks have occurred within facilities.

In facilities with outbreaks, 95% of **residents**<sup>#</sup> have been tested.

In facilities with outbreaks, 85% of **staff**<sup>#</sup> have been tested.

Source: Vermont Department of Health  
Reflects confirmed data as of 7/15/2020.

Values in these charts are rounded to the nearest whole number and therefore may not always add to 100%.  
Percentages by testing status are rounded to the whole number, but combined totals take into account the full percentages.  
<sup>#</sup>Some facilities are excluded from this analysis due to missing information.

Examples of facilities include long-term care and other skilled nursing facilities, correctional facilities, and workplaces.  
Community outbreaks, including those occurring in senior independent living communities, are not represented on this slide.

**While only 31% of all COVID-19 cases are associated with outbreaks, more than half of COVID-19-related deaths occur in outbreak settings.**

Values in these charts are rounded to the nearest whole number and therefore may not always add to 100% due to error introduced in rounding.

Source: Vermont Department of Health  
Reflects confirmed data as of 7/15/2020.

Note: Examples of a health setting include long term care or assisted living facilities, therapeutic treatment centers, and behavioral health institutions. Examples of a non-health setting include correctional facilities, senior housing communities, businesses, and homeless shelters. Vermont has not experienced an outbreak in all health and non-health settings.

# The percentage of **females** and **males** with COVID-19 that are associated with an outbreak is about even.

**29%** of **females** with COVID-19 are associated with an outbreak.

**32%** of **males** with COVID-19 are associated with an outbreak.

**But in outbreak settings, **females** with COVID-19 are more likely to be associated with a health setting than non-health settings.**

Values in these charts are rounded to the nearest whole number and therefore may not always add to 100% due to error introduced in rounding. Percentages by outbreak type are rounded to the whole number, but combined totals take into account the full percentages.

Source: Vermont Department of Health  
Reflects case counts as of 7/15/20

Note: Examples of a health setting include long-term care or assisted living facilities, therapeutic treatment centers, and behavioral health institutions. Examples of a non-health setting include correctional facilities, senior housing communities, businesses, and homeless shelters. Vermont has not experienced an outbreak in all health and non-health settings.

# Percent of Cases by Outbreak Status and Age

■ Not associated with an outbreak

■ Associated with an outbreak in a health setting

■ Associated with an outbreak in a non-health setting

50 years old

71 years old

31 years old

**Median age**

Source: Vermont Department of Health  
Reflects case counts as of 7/15/20

Note: Examples of a health setting include long-term care or assisted living facilities, therapeutic treatment centers, and behavioral health institutions. Examples of a non-health setting include correctional facilities, senior housing communities, businesses, and homeless shelters. Vermont has not experienced an outbreak in all health and non-health settings.

# **Syndromic Surveillance**

What we can learn from emergency room and urgent care centers?

## The percent of emergent care visits for COVID-19-like illness remains steady.

Syndromic surveillance from 13 of 14 Vermont hospitals and 2 urgent care centers. Monitoring this data acts as an early indicator of potential spikes of COVID-19 in the community.

Interpret with caution, there is a chance for over or underestimation given the lag in reporting.

COVID-19-like illness diagnosis is determined using the patient's chief complaint and/or discharge diagnosis.

COVID-19-like illness is the presence of a fever with the addition of shortness of breath, difficulty breathing, or cough.

COVID-19-like illness excludes patients with an influenza discharge diagnosis.

\*Please note: the query used to identify COVID-19-like illness in syndromic surveillance data changed on 5/28. This was to be consistent with the most up-to-date national definition provided by the CDC.
