Here you go.

Hi Eric and Anne,

I'm helping Noble update the WRLCM model description to include as an appendix for the ROCon BO. One major change with this version of the model is we needed to use the Newman model instead of the ePTM to estimate survival in the delta. This means I need to update figure 3 (below) with Newman info instead of ePTM info.

Noble thought one of you may have the original version of Fig 3 (below) that I could edit-- any chance you do? If not, I'll recreate it from scratch.

Thanks,

Ann-Marie

Figure 3. Submodels that support and provide parameter inputs that feed into the life cycle model.
