

## PCS Travel Time Computation when Travel Is by Mixed Modes (JTR, par. 053807-B)

**Scenario:** The official distance between authorized travel points is 385 miles. A civilian employee travels 200 miles by privately owned vehicle (POV) and 500 miles by air.

| Step                                 | Action   | Calculation                       | Result                             |
|--------------------------------------|--|-----------------------------------|------------------------------------|
| 1                                    | Determine the official distance between authorized travel points by using the <a href="#">Defense Table of Official Distances (DTOD)</a> .   | 385 miles                         | 385 miles                          |
| 2                                    | If the distance in Step 1 is at least 350 miles but no more than 400 miles, 1 day of travel is allowed. If the distance is greater than 400 miles, then divide by 350 to determine the number of authorized travel days. If the remainder is 51 or more, 1 additional travel day is allowed. The result determines the maximum number of authorized travel days. | 385 is less than<br>400           | 1 maximum<br>authorized travel day |
| 3                                    | Determine the actual number of miles a POV was used between the official points (the distance traveled to a leave point is included).  | 200 miles                         | 200 miles                          |
| -4                                   | If this is greater than the official distance in Step 1, then the authorized travel is the same as in Step 1 and no further computation is required. If the distance is less than what was allowed in Step 1, and at least 350 miles, then divide by 350. If the excess distance is 51 or more miles, one additional travel day is authorized.                   | 200 is less than<br>350           | 1 authorized travel<br>days        |
| 5                                    | Allow 1 day for travel by air, train, or bus transportation.   | 1 day                             | 1 day                              |
| 6                                    | Add Step 4 and Step 5 together.  | 1+1= 2                            | 2 days                             |
| 7                                    | Compare the result in Step 6 with the maximum authorized travel time in Step 2 and choose the lesser.  | Step 6 = 2 days<br>Step 2 = 1 day | 1 day                              |
| <b>Total authorized travel time:</b> |  |                                   | <b>1 day</b>                       |
