

EUMETSAT Satellite Programmes

Data and Services provided by EUMETSAT
The European Organisation for Exploitation of Meteorological Satellites

Meteosat

Metop

Jason

... The primary objective is to establish, maintain and exploit European systems of operational meteorological satellites.

A further objective is to contribute to the operational monitoring of the climate and the environment as well as the detection of global climatic changes.

EUMETSAT Satellite Programmes

Goal: Maintain continuity and develop the operational meteorological and climate data services with adequate satellite and ground infrastructure, and associated user services

MFG: Meteosat First Generation

MSG: Meteosat Second Generation

EPS: EUMETSAT Polar System

OSTM: Ocean Surface Topography Mission

EUMETSAT Satellite Programmes

EUMETSAT Satellite Programmes

Meteosat - Status

- **Meteosat-6: Launched on 20 November 1993, since May 2007 at 67.5E as stand-by over the Indian Ocean**
- **Meteosat-7: Launched on 2 September 1997, operational at 57.5E in support of the Indian Ocean Data Coverage Service**
- **Meteosat-8 (MSG-1): Launched on 28 August 2002, stand-by at 3.4W since 11 April 2007; will be used for a rapid scanning service (trials in summer 2007 – operational from spring 2008 onwards at a new position of 9.5E)**
- **Meteosat-9 (MSG-2): Launched on 22 December 2005, operational at 0.0 degree since 11 April 2007**

Example of a Multi-Channel RGB loop from Meteosat-8

Metop - A

EUMETSAT Satellite Programmes

Launch from the Baikonour Cosmodrome
with Sojuz/Fregat the 19th October 2006

We have a really global view now...

EUMETSAT Satellite Programmes

MHS on Metop

Meteosat 8

Prepared with **IDV** by Roesli, 2006

data composited of Meteosat-8 and Metop-A
SEVIRI 10.8um - MHS 89GHz

EUMETSAT Satellite Programmes

EPS: The EUMETSAT Polar System with its Metop Satellites

EPS Programme Elements

EUMETSAT Satellite Programmes

Polar Stations
Svalbard, 78 deg Nord

Launcher Service
(Soyuz/Fregat)

- Metop-A launched 19th October 2006
- Sun-synchronous Orbit
- 820 km, 9h30 LST, 102 min
- Only polar data source from mid-morning orbits
- 11 Instruments
- Metop-B and Metop-C recurrent models
- Soyuz launcher service (Baikonour)
- LEOP Service from ESOC (Darmstadt)
- Central and distributed Ground Segment components
- 14 years of operations

LEOP Service
(ESOC)

EUMETSAT Satellite Programmes

The EPS Services

EUMETSAT Satellite Programmes

Local mission : real-time transmission of imaging and sounding data to local user stations.

Global mission : delivery of global measurements to Met Services and NOAA within 2¼ hours of the instant of observation (GTS, EUMETCast)

Search and Rescue service (S&R)

ARGOS mission of in-situ observational data.

IASI TEC
CNES Toulouse
CaVal of IASI
Monitoring of IASI

Archiving & Retrieval
All data and products are archived in the **UMARF**

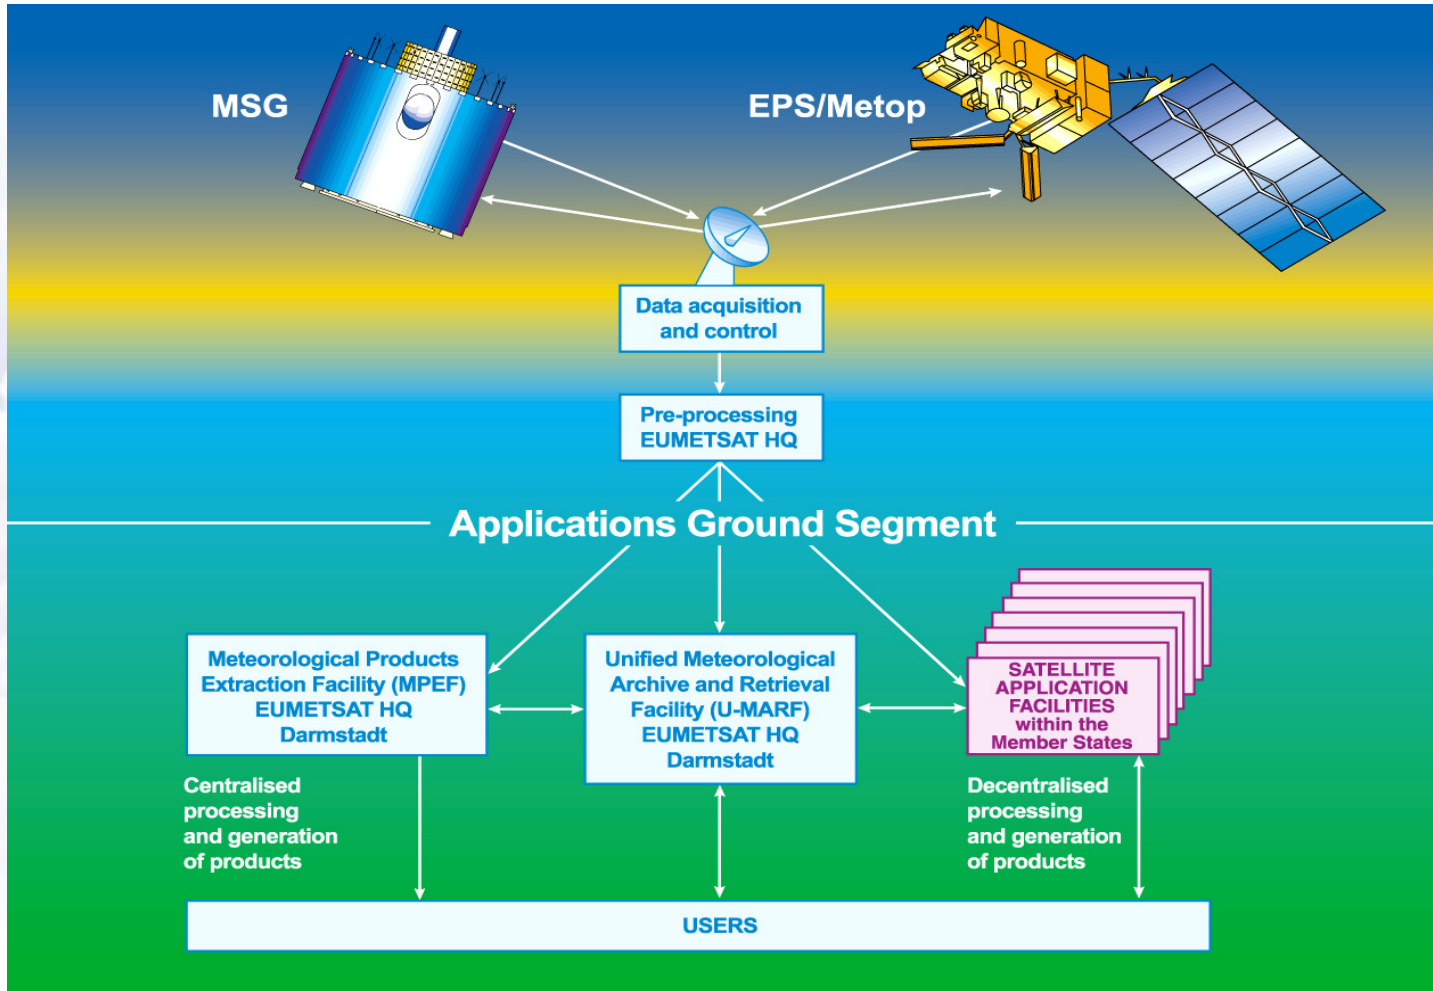

Data Dissemination
EUMETCast: Full NRT data stream
GTS: Subset

Loyola, 2007

Advanced Scatterometer (ASCAT)

Wind vectors at the ocean surface - 25km and 12.5km

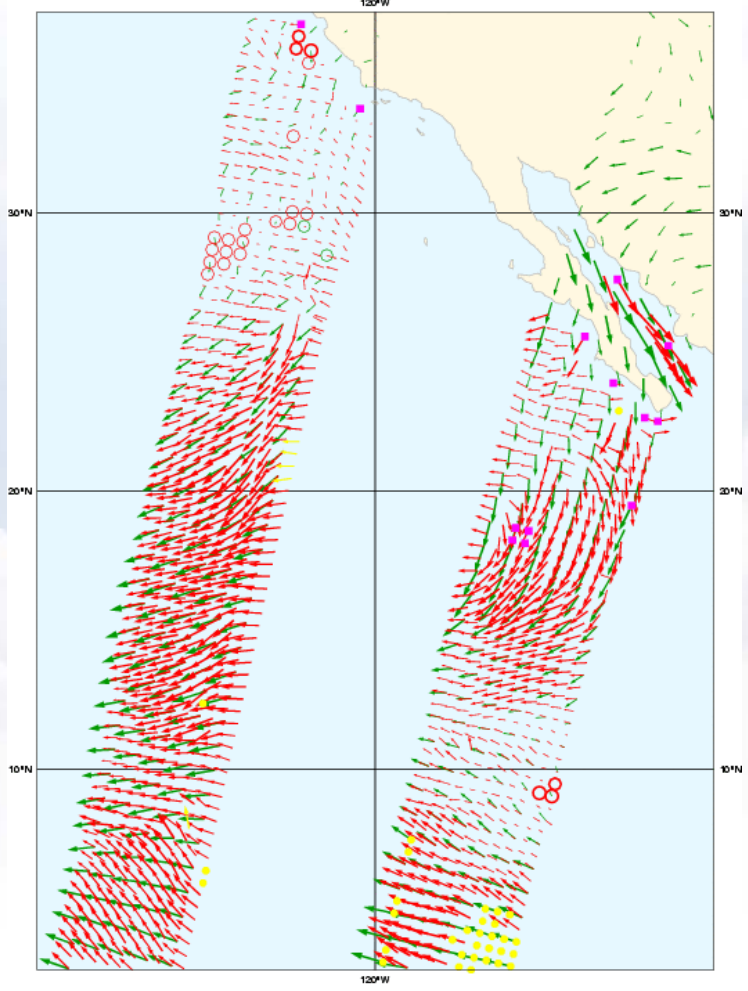

Ocean winds by ASCAT

EUMETSAT Satellite Programmes

ASCAT: 20061027 17:30Z lat lon: 20.00 -120.00

Ocean winds, produced by KNMI from ASCAT data
Compared with ECMWF winds (FG)

H. Hersbach, 2006

Tracking GPS satellites with GRAS

EUMETSAT Satellite Programme

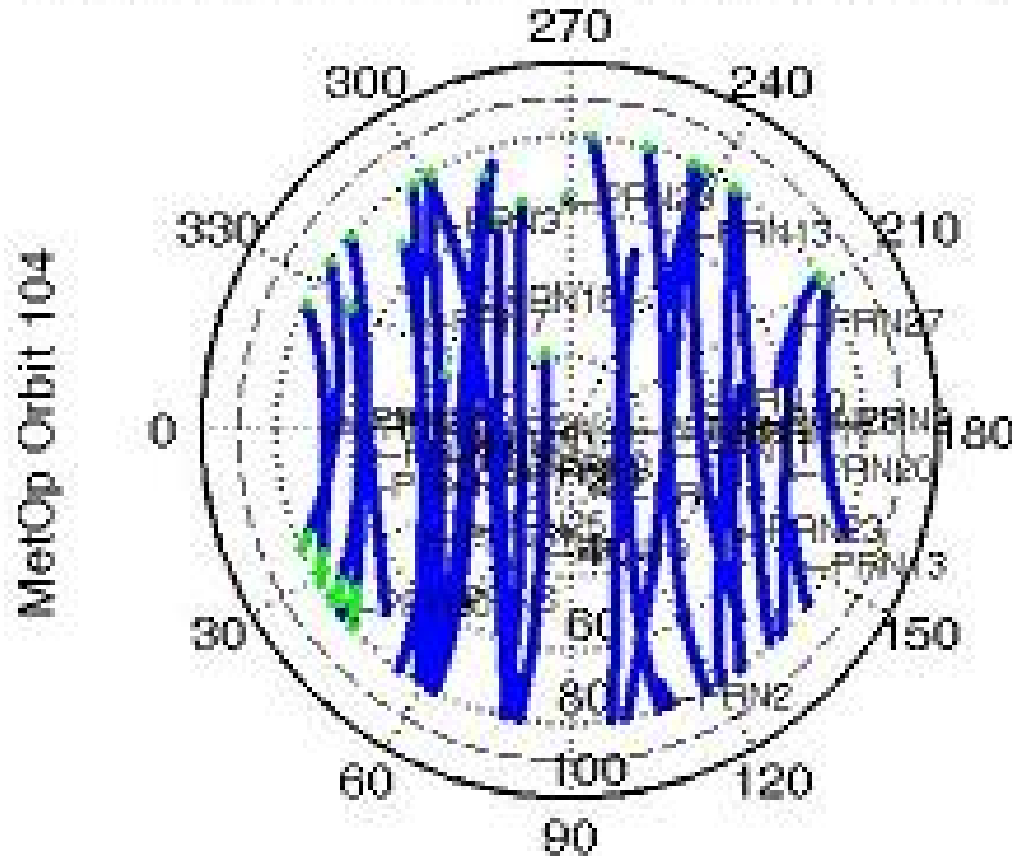

GPS tracked by GRAS

EUMETSAT Satellite Programmes

GPS tracked by GRAS Zenith antenna: blue=DF; green=SF

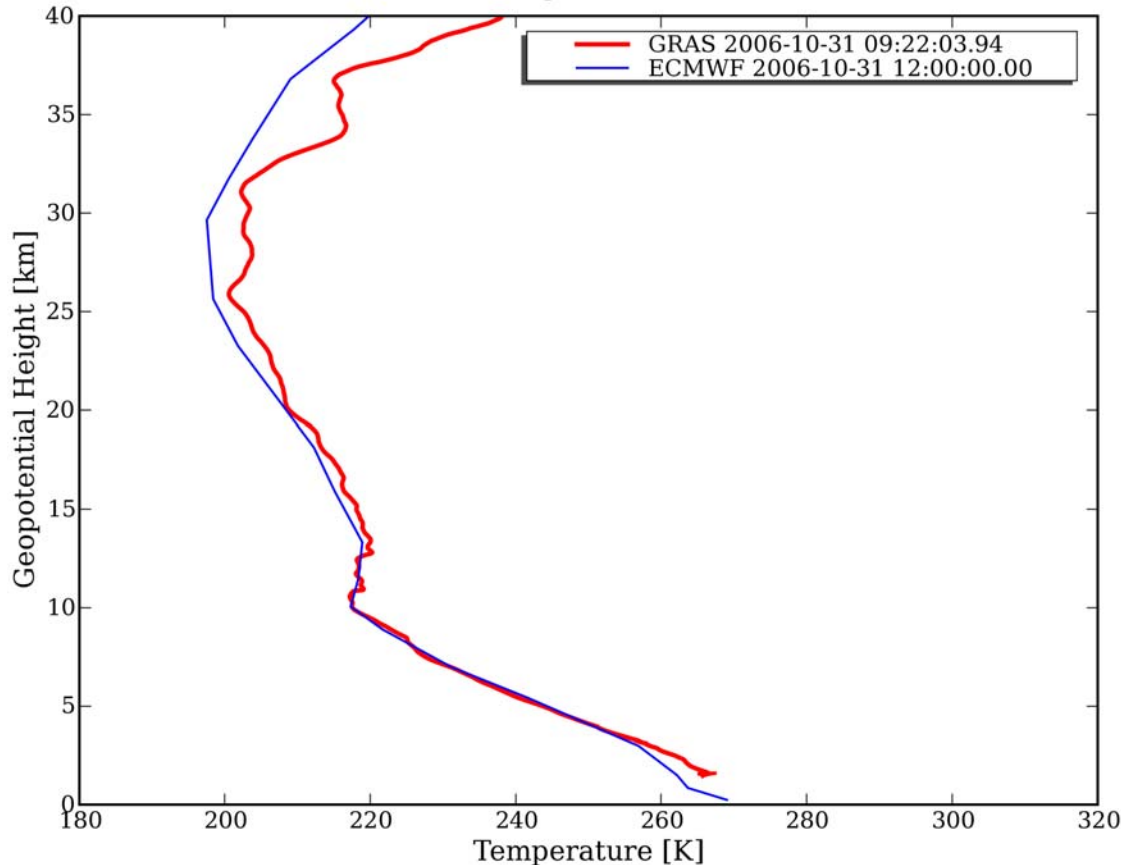

ESA - GPP SIOV 27 Oct 2006 ML

First GRAS retrievals – Setting occultations

EUMETSAT Satellite Programmes

GRAS (setting) at 67.0N, 20.2W

“No frills” measurement reconstruction & dry temperature retrieval
No raw sampling
Initialised with CIRA climatology
Compared with ECMWF operational analysis on 21 standard pressure levels
Higher altitude biases related to known CIRA biases

C. Marquardt
and the GRAS Team

Meteosat
Third
Generation

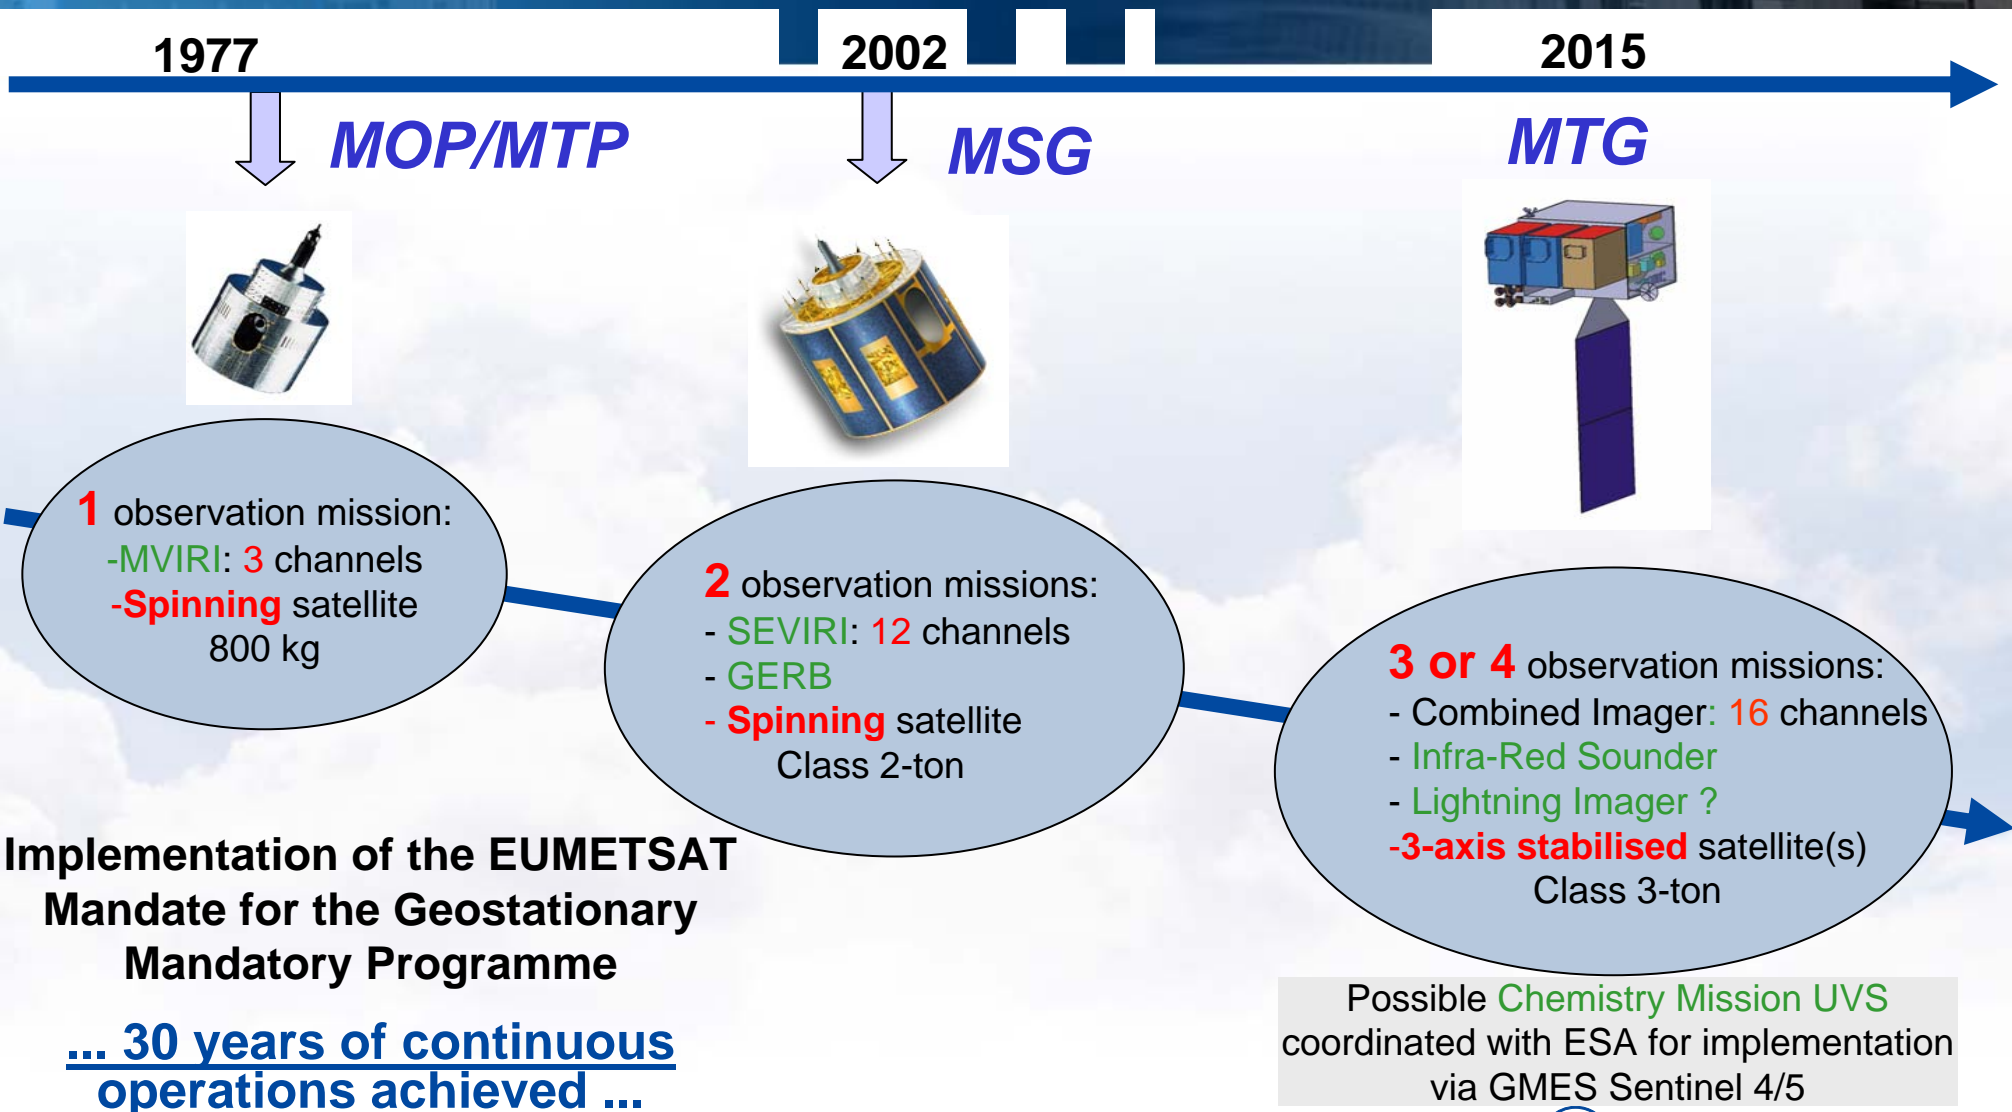

EUMETSAT Satellite Programmes

MTG will provide continuity of EUMETSAT Services

EUMETSAT Satellite Programmes

**Implementation of the EUMETSAT
Mandate for the Geostationary
Mandatory Programme**

**... 30 years of continuous
operations achieved ...**

The MTG Imagery Missions

EUMETSAT Satellite Programmes

- MTG imagery missions served by a Flexible Combined (FC) imager
- Use of in-orbit spare satellite for rapid scan

FDHSI mission (continuation of MSG-SEVIRI):

FC imager on the operational satellite in Full Disk mode with 10 min repeat cycle

HRFI mission (continuation of Rapid Scan):

FC imager on fully commissioned in-orbit hot standby in Rapid Scan mode over 1/4 of Full Disk with 2.5 min repeat cycle

	Coverage	Repeat cycle
FDHSI mission	Full Disk	10 min
HRFI mission	1/4 FD	2.5 min

Jason-2 Ocean Surface Topography Mission

EUMETSAT Satellite Programmes

Jason-2

Precise and continuous altimetry data (in support of operational activities in marine meteorology, seasonal forecasting and oceanographic services) through laser technology

EUMETSAT Satellite Programmes

Goal: Ensure that the EUMETSAT activities are part of a coherent WMO global system

WMO system is designed to meet needs of our Member and Co-operating States

Recognition of European contribution to this global system

Key message:
Remain a recognised global actor

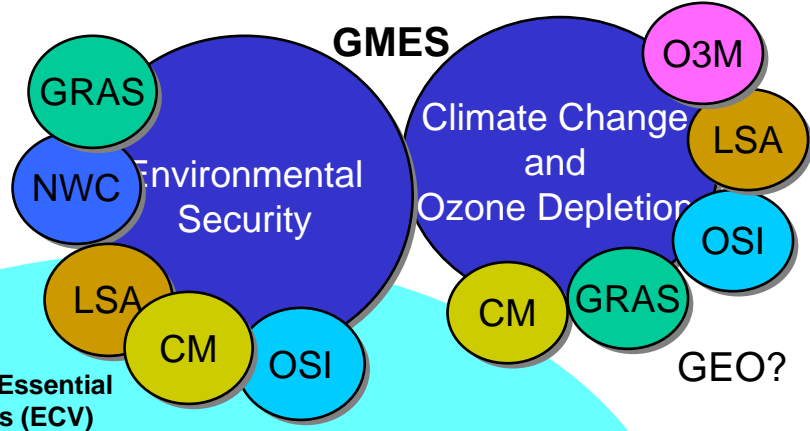

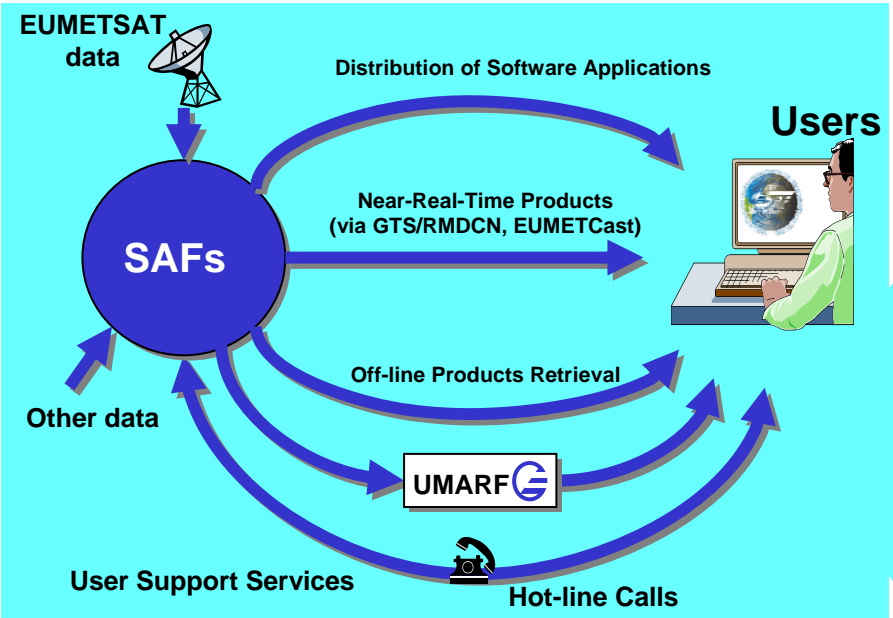

EUMETSAT Satellite Programmes

Key Message:
Promote the use of key EUMETSAT infrastructures

Goal: Maximise the use and ensure the maximum benefit is delivered from the EUMETSAT systems

SAF Interactions with Users

GCOS focus on Essential Climate Variables (ECV)

- Currently feasible for global implementation
- High impact on the UNFCCC requirements
- New parameters to be added after on-going research

GCOS related activities:

- OSI SAF: Global Sea Ice
- OSI SAF: Global Sea Surface Temperature
- OSI SAF: Sea Ice Reprocessing
- CM SAF: Global Humidity Product
- Cross-SAF: Integrated SAF product

EUMETCast

EUMETSAT's Broadcast System for Environmental Data

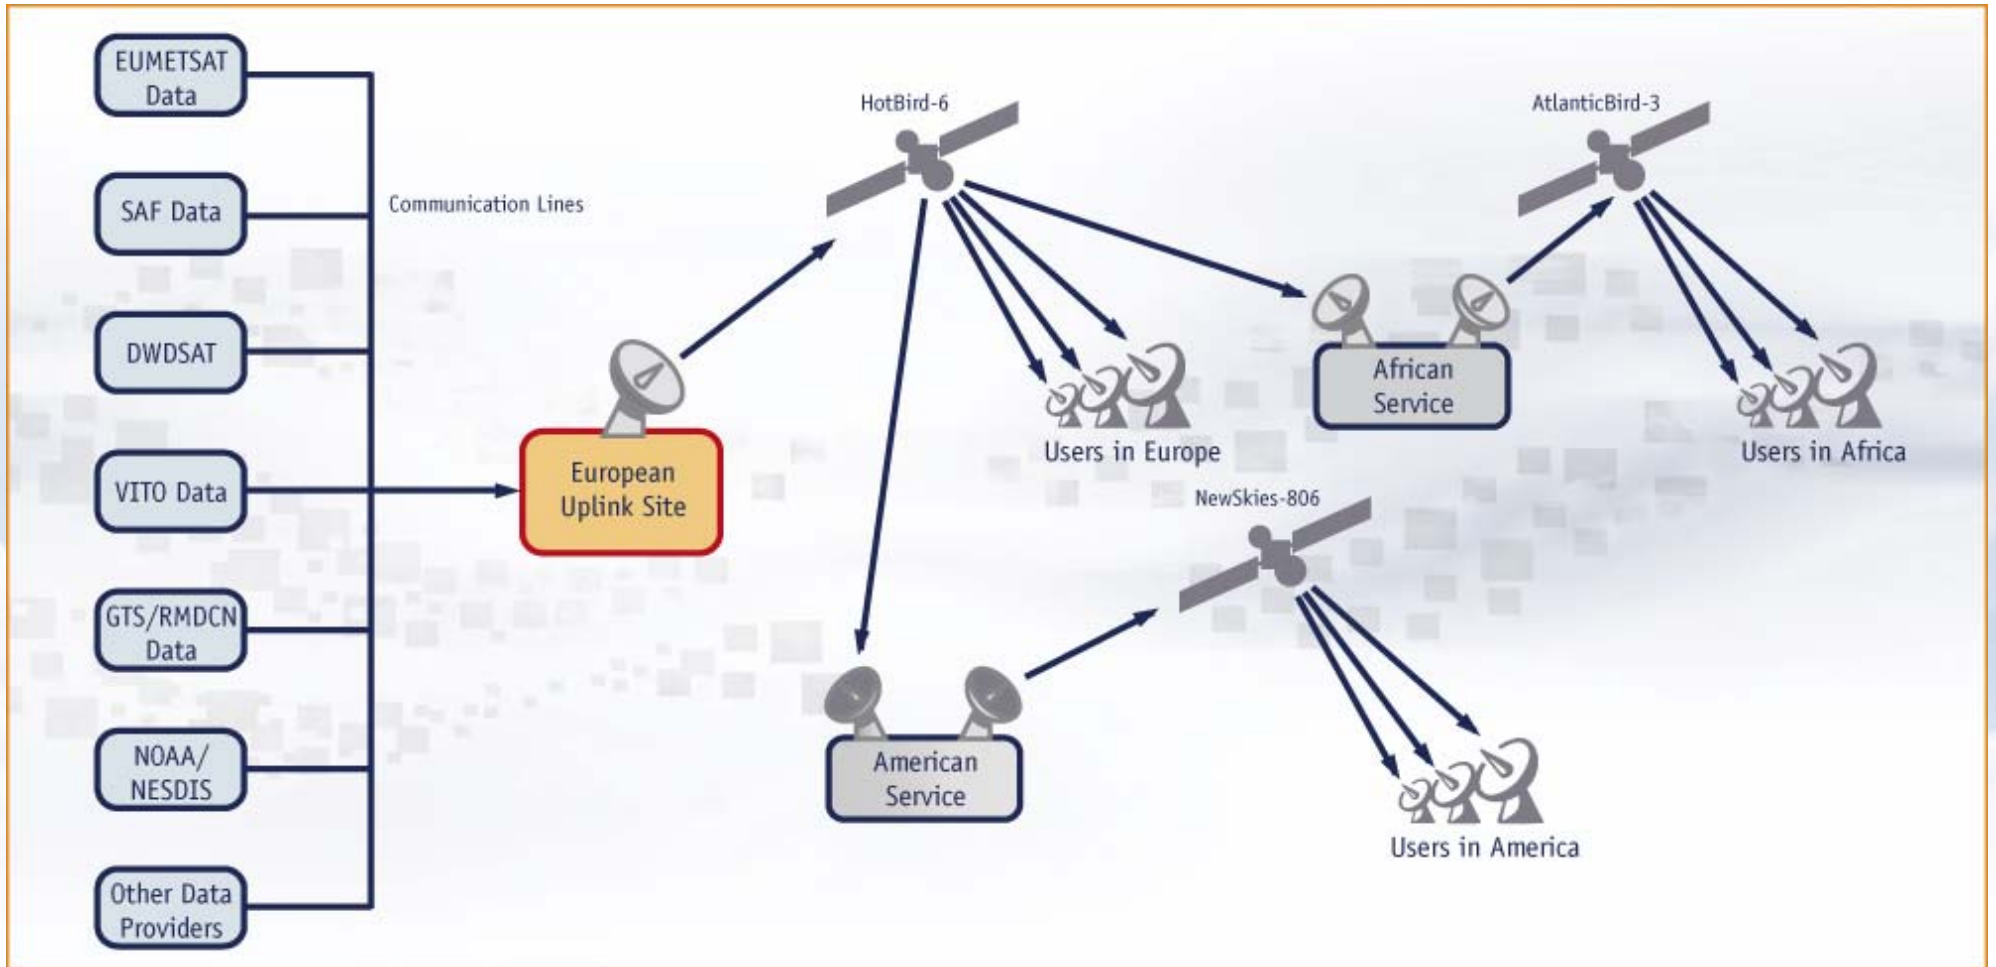

- **A multi-service dissemination system based on standard Digital Video Broadcast (DVB) technology**
- **Using commercial telecommunication geostationary satellites to multicast files (data and products) to a wide user community**
- **EUMETCast is now available for use by Global Earth Observation System of Systems (GEOSS), the European Global Monitoring for Environmental and Security (GMES) initiatives and other environmental data providers**
- **EUMETCast is also a EUMETSAT contribution to the Integrated Global Data Dissemination Service (IGDDS), a component of the World Meteorological Organization Information System (WIS)**

- **Generic, multi-mission dissemination systems based on standard DVB multicast technology**
- **Uses commercial broadcast channels on TV, DTH telecommunication satellites**
- **Off-the shelf, commercially available reception equipment**
- **IP over DVB standard coding**
- **Use of standard formats/encoding - XRIT, BUFR, GRIB, HDF**
- **Secure access control at individual file and group of Users level**
- **Open, flexible, scalable architecture**

EUMETCast Overview

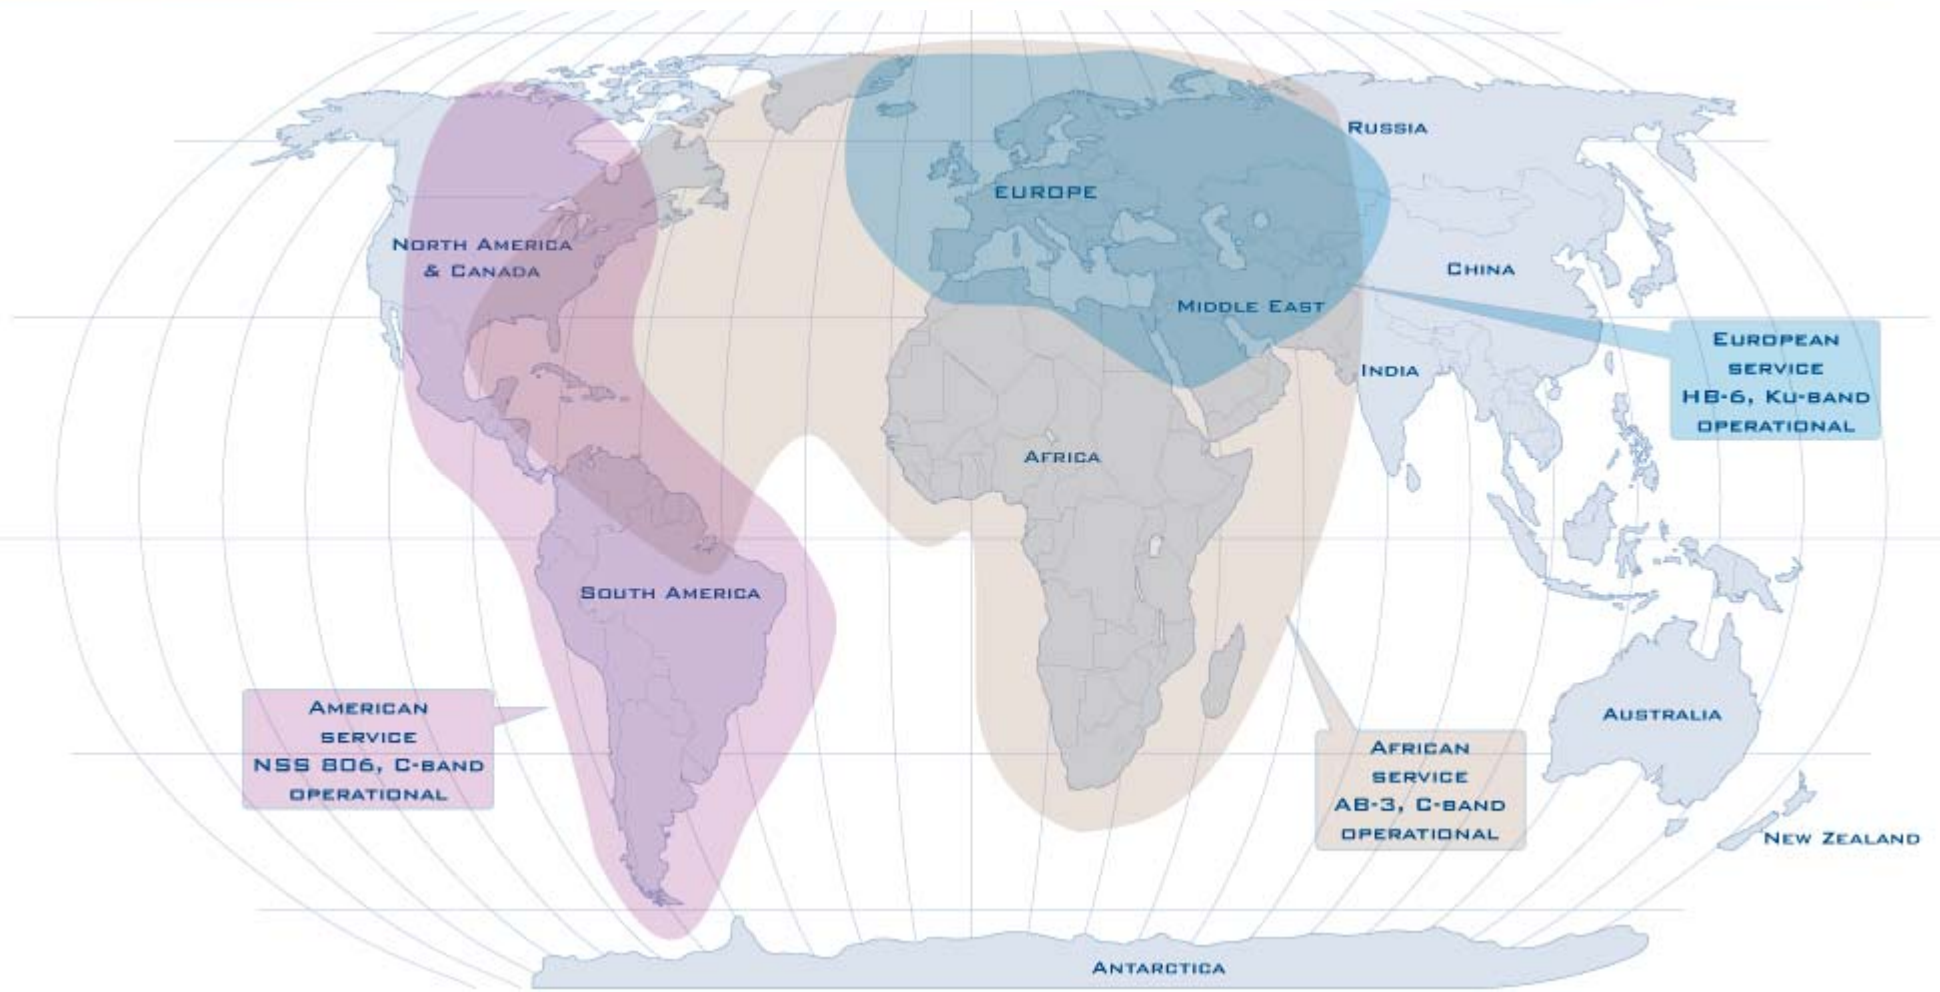

EUMETSAT Satellite Programmes

EUMETCast Coverage

EUMETSAT Satellite Programmes

EUMETCast (DVB) Standard Hardware - indicative costs

LNB/Feedhorn, Antenna	200 EUR
2 x PC, Hard Disk, Ethernet	2000 EUR
DVB PCI Card	100 EUR
EUMETCast Client Software	60 EUR
EUMETCast Key Unit (EKU)	40 EUR
Total (2 PCs)	2400 EUR
Total (1 PC)	1400 EUR

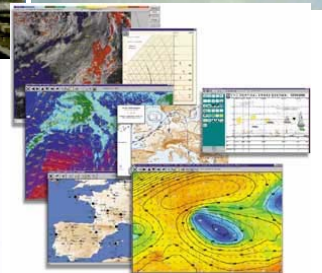

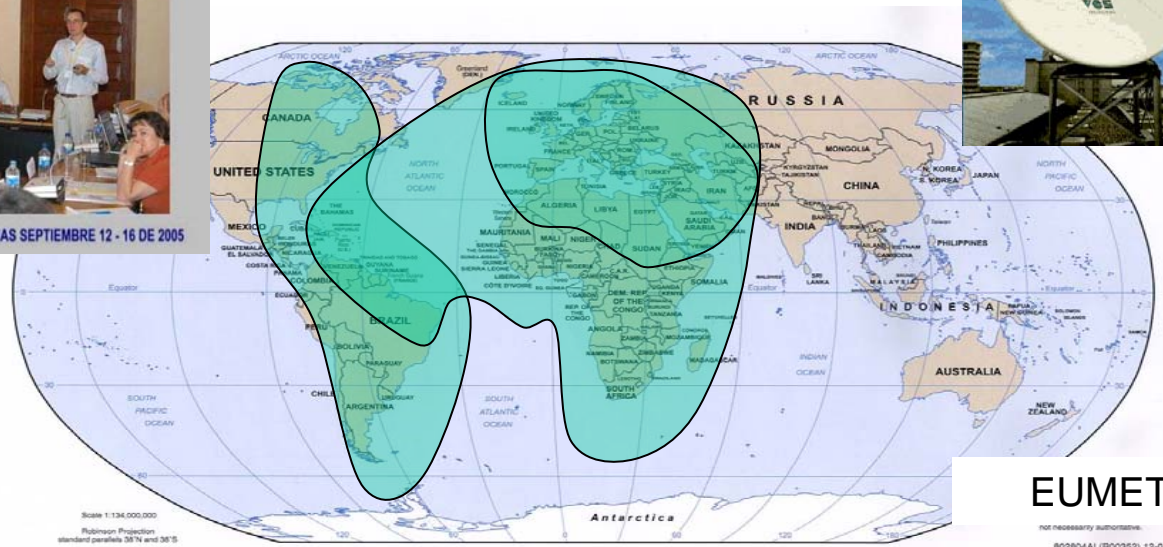

EUMETSAT Satellite Programmes

Goal: Extend the EUMETSAT user base through collaboration in research, training support and assistance to countries in Europe and the developing world in the exploitation of EUMETSAT data

Key Message:
Broaden the user communities

EUMETCAST
not necessarily authoritative.
802804A1 (R00352) 12-01

The Role of EUMETSAT in Training

- To act as a catalyst, promoting training in use of satellite data in Member & Cooperating States
- No competition with training institutes of larger Member State but close cooperation (Germany, UK, France etc.)
- Expertise from Member or Cooperating States often used at EUMETSAT training courses, workshops, etc.
- EUMETSAT often takes the lead when the scope of a training activity is too big for one country: EUMeTrain, SATMANU, MSG Interpretation Guide, etc.

EUMETSAT's training is achieved through:

- Classroom courses
- Preparation of training material (e.g. CAL modules)
- Distant learning activities (e.g. VisitView)
- Preparation of Web content

The EUMETSAT distance learning Web Page at:
http://www.eumetsat.int/idcplg?IdcService=SS_GET_PAGE&nodeId=532&l=en

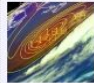

The screenshot shows a Microsoft Internet Explorer browser window displaying the EUMETSAT website. The address bar shows the URL: http://www.eumetsat.int/idcplg?IdcService=SS_GET_PAGE&nodeId=532&l=en. The website header includes the EUMETSAT logo and the tagline "Monitoring Weather, Climate and the Environment". The main navigation menu includes "WHO WE ARE", "WHAT WE DO", "ACCESS TO DATA", "IMAGE GALLERY", "PUBLICATIONS", and "MEDIA". The "WHAT WE DO" section is expanded to show "Distance Learning".

Distance Learning

On this page a number of training sessions in the area of Satellite Meteorology are offered as teletraining sessions. The teletraining sessions utilise the VISITview software (see related links) where a PC with an Internet connection is required. A conference call or Voice over IP (VOIP) is used for the instructor and students to interact. The phone number and/or the VOIP contact details will be provided by email along with signup instructions.

The currently available training sessions are given in the list below. Please, click on the link under "Details" to get a full description of the session and the download instructions. If you want to participate in a training session, please check the **Schedule** for details as regards dates and times. If you prefer self-learning, you can download the training lesson to your local PC and open it in a local mode. More instructions are given in the PDF files under "Details".

Note: it is recommended to use a fast Internet connection for downloading. The files can be very large, typically around 50 MB. Downloading via an analogue modem is not appropriate.

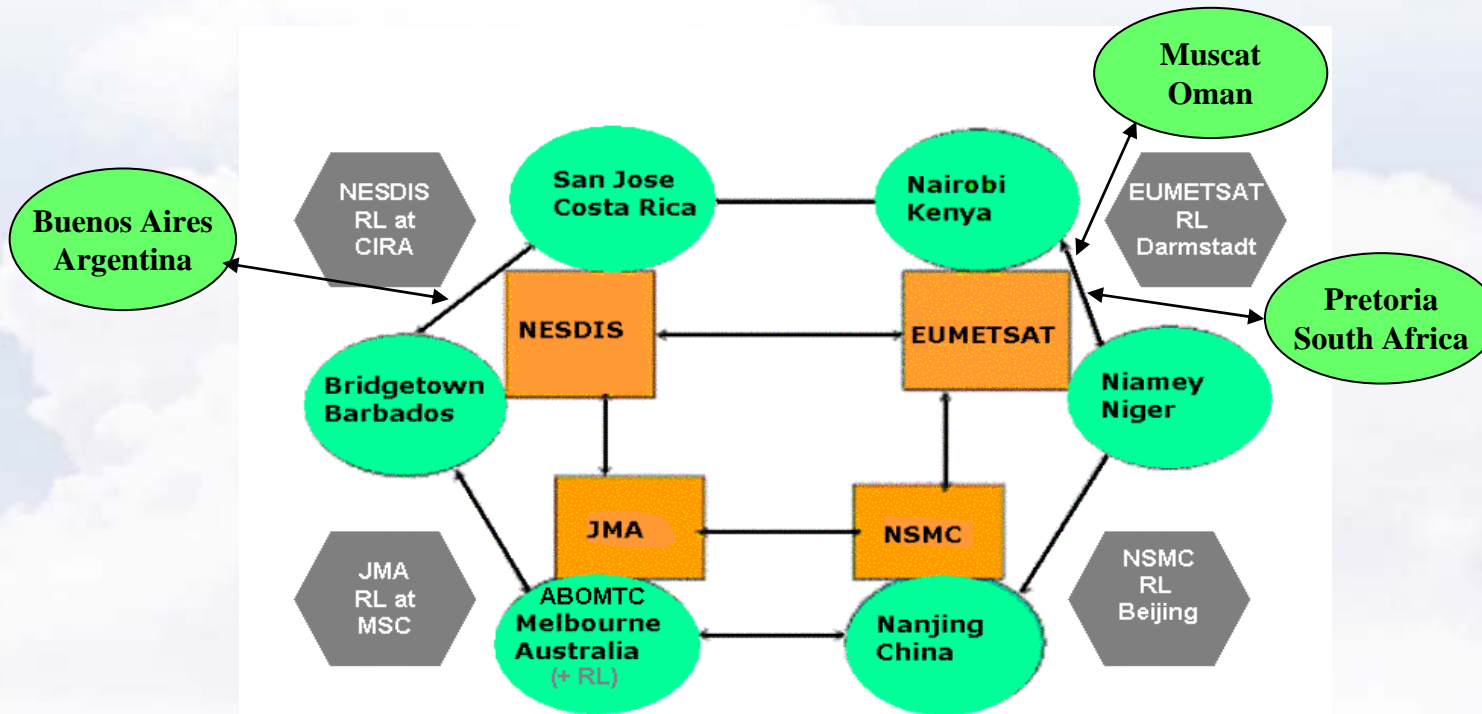

Title	Author	Duration	Details	PDF
 Airmass RGB	Jochen Kerkmann	90 min.	Details	PDF, 43 KB
 Early Detection of Rapid Cyclogenesis	Jochen Kerkmann	120 min.	Details	PDF, 46 KB

EUMETSAT Training Program EUMETSAT Satellite Programmes

- **EUMETSAT's training activities focus primarily on operational personnel from weather services of Member States and Co-operating States.**
- **Training outside Member States is coordinated in Europe through EUMETCAL and worldwide with the WMO.**
- **International Training Cooperation with NOAA and COMET.**

EUMETSAT like NOAA, JMA and CMA contributes to the WMO Virtual Laboratory for Education and Training.

EUMETSAT Satellite Programmes

Goal: Identify partners for potential EUMETSAT optional or third party programmes or for enhancement of future mandatory Programmes.

Post-EPS partners.
USA, Canada

Group on Earth Observation
Objective: to put in place a Global Earth Observation System of Systems (GEOSS).

EUMETSAT wants to be part of this global system and contribute directly (i.e. GEONETCast)

Key Message:
Build EUMETSAT global player profile through international partnerships

Potential Areas of Cooperation with UNIDATA:

- Joint training efforts, especially in Africa (e.g. Sahel Conference 2007)
- Investigations of archive interoperability (e.g. THREDDS server at EUMETSAT ?)
- Data distribution to universities (using LDM ?)
- Interest in usage of the IDV tools for training and scientific cooperation
