2018
Unidata Users Workshop

Reducing Time to Science:
## Evolving Workflows for Geoscience Research and Education
June 25-28, 2018 – Boulder, Colorado

Registration for the 2018 Unidata Users Workshop is now open.

The Unidata Users Committee invites you to join Unidata staff, community members, and distinguished speakers this June in Boulder, Colorado. The goal of this year's workshop is to raise awareness of the current trends in the academic geoscience community with an emphasis on Data Proximate Analysis, Machine Learning and Data Analytics, Using GOES-16 Data, and Working with Ensemble Numerical Weather Prediction Output. Scientists and educators from the academic geoscience community will present ideas and techniques for making effective use of geoscience data and share activities, course materials, and ideas for improving education and research. There will be hands-on workshops, a poster session, and time for informal discussions with presenters and Unidata developers.

Workshop participants share ideas and techniques in a relaxed, collegial setting.

Registration for the Users Workshop is open through May 21, 2018. See the Registration page for details.

Come Join the Unidata User Community this Summer

Visit www.unidata.ucar.edu/events/2018UsersWorkshop for further information.

Pending NSF funding for the workshop, there will be partial support for participants and a limited number of student stipends.
