

**COLLEGE OF ENGINEERING AND APPLIED SCIENCE AWARDS
SELECTION CRITERIA
HALL OF FAME
DISTINGUISHED ENGINEER/SCIENTIST
DISTINGUISHED SERVICE
8/17/21**

SELECTION CRITERIA:

Hall of Fame

Nominees for the Hall of Fame (HOF) must have earned a degree from a department within the University of Wyoming College of Engineering and Applied Science and have at least ten years of professional engineering and/or applied science experience since earning that degree.

Selection to the HOF is based upon the achievements and contributions in engineering, computer science, and atmospheric science practice and leadership of the nominee at the national or international level. The HOF nominees should have achieved at least national recognition and preferably international recognition.

Nominees should be recognized as leaders in their respective fields and for their accomplishments and contributions to their profession and to society including but not limited to membership in honorary societies, receipt or special honors and awards from recognized national and international organizations. Other important considerations for selection are nominees receiving recognition in their community and non-professional arenas.

Nominees cannot be current faculty or administrators of the University of Wyoming.

Distinguished Engineer/Scientist Award

Nominees for the Distinguished Engineer/Scientist Award must have earned an engineering degree and/or a science degree and have at least ten years of professional experience in engineering and/or applied science since earning that degree.

The Distinguished Engineer/Scientist Award is not limited to recognition for achievements in engineering and/or applied science, but also recognizes the achievements and contributions of those graduates who have had exemplary careers in other non-engineering or applied science fields in which a background and degree in engineering or applied science has played a role.

Selection to awarding the Distinguished Engineer/Scientist Award is based upon engineering, computer science and atmospheric science practice and leadership contributions of the nominee. Achievements in other non-engineering or applied science fields in which a background in engineering or applied science has played a role are also considered.

The Distinguished Engineer/Scientist nominees should have regional recognition and preferably national recognitions for their accomplishments. Honorees are recognized for their professional and leadership achievements and have brought distinction to the programs of the College.

Nominees should be recognized for their accomplishments and contributions to the profession and to society including but not limited to membership in honorary societies, receipt, or special honors and awards from recognized organizations. Other important considerations for selection are nominees receiving recognition in their community and non-professional arenas.

Nominees cannot be current faculty or administrators of the University of Wyoming.

Distinguished Service Award

Any individual deserving recognition for service to the University of Wyoming College of Engineering and Applied Science is eligible for nomination for the Distinguished Service Award.

This includes but is not limited to current faculty, staff, and administrators of the University of Wyoming.

Selection for awarding the College of Engineering and Applied Science Distinguished Service Award is based upon the contributions that the nominee has made in service to the College and advancing the goals and vision of the College.

The Distinguished Service Award may also be awarded to recognize an individual for specific and/or special accomplishments.
