California Highway Patrol reported that flooding caused a spinout on SR 49 near Knickerbocker Rd.				

Storm Data and Unusual Weather Phenomena - March 2023

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Showers continued across the area during the morning of March 1 behind the storm which had brought rain and snow to the area during the previous two days. Heavier showers resulted in several reports of roadway flooding in the Fresno area while snow showers produced accumulating snowfall over the Tejon and Tehachapi Passes which resulted in the passes on both Interstate 5 and SR 58 being closed for much of the day.

(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z303) PLANADA-LEGRAND-SNELLING, (CA-Z305) WEST SIDE OF FRESNO AND KINGS COUNTIES, (CA-Z306) CARUTHERS - SAN JOAQUIN - SELMA, (CA-Z307) FRESNO - CLOVIS, (CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY

03/02/23 02:00 PST	0	Frost/Freeze
03/02/23 08:00 PST	0	

Temperatures dropped below the freezing mark across portions of the central and eastern San Joaquin Valley for a few hours during the morning of March 2 as a cold airmass settled into the area with clearing skies and light winds prevailing.

03/05/23 19:02 PST	0	Source: Law Enforcement

California Highway Patrol reported a tree on all lanes of Rd. 96.

KINGS COUNTY --- 0.5 ENE HANFORD [36.33, -119.64], 0.5 ENE HANFORD [36.33, -119.64]

03/05/23 23:10 PST	6K	Thunderstorm Wind (EG 35 kt)
03/05/23 23:10 PST	0	Source: NWS Employee

An NWS employee noticed storm damage from a blown down tree next to his house where several tree branches were on the street and had destroyed a car.

An upper trough moved eastward across central California on March 4 and March 5. This system produced snow at elevations down to 2000 feet with some higher elevation SNOTELS north of Kings Canyon picking up between a foot and 2 feet of new snowfall. Thunderstorms broke out in the San Joaquin Valley during the afternoon and evening of March 5 producing widespread nuisance flooding and small hail. In addition, outflow gusts from some of the thunderstorms downed some trees.

Image shown on Twitter showing the River Island Country Club in Springville flooded.				
<p>A large upper trough off the Pacific Northwest coast pulled up a deep moisture fetch from the Pacific Ocean which spread inland into central California on March 9 and 10. This atmospheric river event produced 4 to 8 inches of liquid precipitation across much of the Sierra Nevada. With this moisture being of tropical origin, snow levels were high and were above 9500 feet for much of this event. The rain falling on top of a large snowpack over the Sierra Nevada produced a large amount of runoff resulting in widespread catastrophic flooding over the San Joaquin Valley, the valley facing slopes as well as across the Sierra foothills with over 100 reports of flooding being reported to WFO Hanford. The conditions were made worse by the fact that soils already very saturated over the lower elevations from previous storms. In addition, the Sierra foothills generally picked up between 2 and 5 inches of rainfall while the San Joaquin Valley had between 0.75 to 1.5 inches of rainfall. Flash Flood Emergencies were issued for the Springville area in Tulare County and for the Kernville and Wofford Heights area in Kern County near Lake Isabella for life threatening flooding caused by heavy rainfall on top of snowmelt runoff from higher elevations. By the time the deep moisture fetch moved out of the area during the evening of March 10, several communities were evacuated due to the widespread flooding and numerous roads were closed for several days either because of flooding or because repairs were required to make the roads usable.</p>

California Highway Patrol reported a power pole broken in half and power lines on the roadway on S. Fowler Ave. north of E. Kamm Ave.

Following the departure of the warm and moist storm which produced widespread flooding across the area on March 9 and 10, another moist system moved through central California on March 11 and 12. While precipitation amounts were generally much lower with this system with most of the Sierra Nevada picking up between 1 and 2 inches of liquid precipitation and adjacent foothills picking up between a half inch and an inch of rainfall, the cooler unstable airmass on the back side of this system produced afternoon and evening thunderstorms across the lower elevations resulting in widespread flooding and wind damage across the San Joaquin Valley.

Storm Data and Unusual Weather Phenomena - March 2023

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Portions of SR 178 were closed because of mud slides through the canyon.

Following the recent events which produced widespread flooding across the central California Interior, another atmospheric river plunged through the region on March 14 and 15 producing heavy precipitation, flooding and strong winds with several stations measuring gusts exceeding 60 mph. Much of the Sierra Nevada picked up another 3 to 6 inches of liquid precipitation with snow levels above 8500 feet while the adjacent foothills picked up 2 to 4 inches of rainfall while the San Joaquin Valley and West Side Hills generally picked up between 0.5 to 1.5 inches of rainfall.

MERCED COUNTY --- 2.5 NW STEVINSON [37.35, -120.88], 3.0 SW IRWIN [37.37, -120.88], 1.4 SE IRWIN [37.38, -120.84], 2.0 NNE STEVINSON [37.36, -120.83]

03/20/23 02:00 PST	0	

An upper trough pushed into central California and moved through the region on March 19. This system brought 0.75 to 1.5 inches of liquid precipitation to the Sierra Nevada, a quarter inch to an inch of rain to the Sierra foothills and a tenth to quarter inch of rain to much of the San Joaquin Valley and West Side Hills. This system cam in warmer than anticipated and the snow level ranged from 6500 to 7000 feet with this system. Several higher elevation SNOTELS in the Sierra Nevada picked up an estimated 8 to 16 inches of new snowfall.

California Highway Patrol reported southbound Interstate 5 was flooded south of Little Panoche Rd.

A strong upper trough moved across the region on March 21 and 22. This system produced strong winds across the West Side Hills, the Sierra Nevada and across the Kern County Mountains and Deserts where several stations measured gusts exceeding 60 mph. In addition, heavy snow fell in the Sierra Nevada where several high elevation SNOTEL stations picked up between 18 and 30 inches of new snow while liquid precipitation totals were generally between 1 and 2 inches. Much of the San Joaquin Valley picked up between a quarter and three quarters of an inch of additional rainfall over an already saturated ground while thunderstorm outflow winds knocked down several trees in and around Fresno during the afternoon of March 21.
