January 22nd to 24th Winter Storm

WINTER STORM SUMMARY FOR
01/22-24/2016

Synopsis

Low pressure began to develop in the southern Gulf of Mexico early on Friday January 22nd. This low pressure moved northeastward into the Tennessee valley before reforming as a coastal low off the North Carolina coastline. On Saturday January 23rd, the low pressure system moved slowly northeast along the mid-Atlantic coastline. By Sunday January 24th the low pressure system moved out to sea.

Significant impacts

Snow began to develop Friday evening from south to north, moderate to heavy at times. Across the coastal regions the snow changed to rain limiting totals. Periods of snow continued Saturday morning. By the afternoon, intense snow bands with rates of 2-4 inches per hour set-up in North Central New Jersey and the Lehigh Valley as the Philadelphia metropolitan region was in a dry slow. Lighter snow continued into the evening hours across eastern portions of the region.

Winds were very gusty topping out between 30-50 mph for most of the region. Stronger winds near hurricane force were observed on the coastal waters. Due to the heavy nature of the snow, road crews could not keep up with it. Travel became nearly impossible at times for most of the region. Airports also cancelled most flights as well. Strong winds did cause some power outages, particularly closer to the coast. Moderate to major tidal flooding along the New Jersey and Delaware beaches which resulted in severe beach erosion and some property damage in coastal communities.

Storm Total Snow and/or Ice

Snowfall ranged from 2-32 inches with the lowest on the Sussex Delaware beaches and the highest from Berks PA northwest to Allentown and then into North Central New Jersey. Totals from 15-24 inches occurred in the Philadelphia Metropolitan region.
