

Xerox Corporation

2024 CDP Corporate Questionnaire 2024

Contents

C1. Introduction.....	7
(1.3) Provide an overview and introduction to your organization.	7
(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.	8
(1.5) Provide details on your reporting boundary.	9
(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?	9
(1.8) Are you able to provide geolocation data for your facilities?	11
(1.8.1) Please provide all available geolocation data for your facilities.	12
(1.24) Has your organization mapped its value chain?	18
(1.24.1) Have you mapped where in your direct operations or elsewhere in your value chain plastics are produced, commercialized, used, and/or disposed of?	19
C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities	21
(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?	21
(2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts?	22
(2.2.1) Does your organization have a process for identifying, assessing, and managing environmental risks and/or opportunities?	23
(2.2.2) Provide details of your organization’s process for identifying, assessing, and managing environmental dependencies, impacts, risks, and/or opportunities.	23
(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?	34
(2.3) Have you identified priority locations across your value chain?	35
(2.4) How does your organization define substantive effects on your organization?	36
(2.5) Does your organization identify and classify potential water pollutants associated with its activities that could have a detrimental impact on water ecosystems or human health?.....	38
(2.5.1) Describe how your organization minimizes the adverse impacts of potential water pollutants on water ecosystems or human health associated with your activities.	39
C3. Disclosure of risks and opportunities.....	41
(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?	41

(3.1.1) Provide details of the environmental risks identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.	42
(3.2) Within each river basin, how many facilities are exposed to substantive effects of water-related risks, and what percentage of your total number of facilities does this represent?	56
(3.3) In the reporting year, was your organization subject to any fines, enforcement orders, and/or other penalties for water-related regulatory violations?	59
(3.5) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?	59
(3.6) Have you identified any environmental opportunities which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?.....	59
(3.6.1) Provide details of the environmental opportunities identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.	60

C4. Governance 67

(4.1) Does your organization have a board of directors or an equivalent governing body?	67
(4.1.1) Is there board-level oversight of environmental issues within your organization?	68
(4.1.2) Identify the positions (do not include any names) of the individuals or committees on the board with accountability for environmental issues and provide details of the board’s oversight of environmental issues.	69
(4.2) Does your organization’s board have competency on environmental issues?	72
(4.3) Is there management-level responsibility for environmental issues within your organization?.....	73
(4.3.1) Provide the highest senior management-level positions or committees with responsibility for environmental issues (do not include the names of individuals).	74
(4.5) Do you provide monetary incentives for the management of environmental issues, including the attainment of targets?	77
(4.5.1) Provide further details on the monetary incentives provided for the management of environmental issues (do not include the names of individuals).	78
(4.6) Does your organization have an environmental policy that addresses environmental issues?.....	82
(4.6.1) Provide details of your environmental policies.	83
(4.10) Are you a signatory or member of any environmental collaborative frameworks or initiatives?	85
(4.11) In the reporting year, did your organization engage in activities that could directly or indirectly influence policy, law, or regulation that may (positively or negatively) impact the environment?.....	86
(4.11.1) On what policies, laws, or regulations that may (positively or negatively) impact the environment has your organization been engaging directly with policy makers in the reporting year?.....	87
(4.11.2) Provide details of your indirect engagement on policy, law, or regulation that may (positively or negatively) impact the environment through trade associations or other intermediary organizations or individuals in the reporting year.....	90

(4.12) Have you published information about your organization’s response to environmental issues for this reporting year in places other than your CDP response?	92
(4.12.1) Provide details on the information published about your organization’s response to environmental issues for this reporting year in places other than your CDP response. Please attach the publication.....	92
C5. Business strategy.....	96
(5.1) Does your organization use scenario analysis to identify environmental outcomes?	96
(5.1.1) Provide details of the scenarios used in your organization’s scenario analysis.	97
(5.1.2) Provide details of the outcomes of your organization’s scenario analysis.	106
(5.2) Does your organization’s strategy include a climate transition plan?.....	107
(5.3) Have environmental risks and opportunities affected your strategy and/or financial planning?.....	109
(5.3.1) Describe where and how environmental risks and opportunities have affected your strategy.....	110
(5.3.2) Describe where and how environmental risks and opportunities have affected your financial planning.	113
(5.4) In your organization’s financial accounting, do you identify spending/revenue that is aligned with your organization’s climate transition?	114
(5.9) What is the trend in your organization’s water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?	115
(5.10) Does your organization use an internal price on environmental externalities?.....	116
(5.11) Do you engage with your value chain on environmental issues?	116
(5.11.1) Does your organization assess and classify suppliers according to their dependencies and/or impacts on the environment?	118
(5.11.2) Does your organization prioritize which suppliers to engage with on environmental issues?	120
(5.11.5) Do your suppliers have to meet environmental requirements as part of your organization’s purchasing process?	122
(5.11.6) Provide details of the environmental requirements that suppliers have to meet as part of your organization’s purchasing process, and the compliance measures in place.....	122
(5.11.7) Provide further details of your organization’s supplier engagement on environmental issues.	126
(5.11.9) Provide details of any environmental engagement activity with other stakeholders in the value chain.	130
C6. Environmental Performance - Consolidation Approach	134
(6.1) Provide details on your chosen consolidation approach for the calculation of environmental performance data.....	134
C7. Environmental performance - Climate Change.....	136

(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?	136
(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?	136
(7.1.3) Have your organization's base year emissions and past years' emissions been recalculated as a result of any changes or errors reported in 7.1.1 and/or 7.1.2?	137
(7.3) Describe your organization's approach to reporting Scope 2 emissions.	138
(7.4.1) Provide details of the sources of Scope 1, Scope 2, or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure.	138
(7.5) Provide your base year and base year emissions.	139
(7.6) What were your organization's gross global Scope 1 emissions in metric tons CO ₂ e?	148
(7.7) What were your organization's gross global Scope 2 emissions in metric tons CO ₂ e?	149
(7.8) Account for your organization's gross global Scope 3 emissions, disclosing and explaining any exclusions.	150
(7.8.1) Disclose or restate your Scope 3 emissions data for previous years.	161
(7.9) Indicate the verification/assurance status that applies to your reported emissions.	163
(7.9.1) Provide further details of the verification/assurance undertaken for your Scope 1 emissions, and attach the relevant statements.	164
(7.9.2) Provide further details of the verification/assurance undertaken for your Scope 2 emissions and attach the relevant statements.	165
(7.9.3) Provide further details of the verification/assurance undertaken for your Scope 3 emissions and attach the relevant statements.	167
(7.10.1) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.	169
(7.15.1) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used global warming potential (GWP).	171
(7.16) Break down your total gross global Scope 1 and 2 emissions by country/area.	279
(7.17.1) Break down your total gross global Scope 1 emissions by business division.	173
(7.17.3) Break down your total gross global Scope 1 emissions by business activity.	174
(7.20.3) Break down your total gross global Scope 2 emissions by business activity.	174
(7.22) Break down your gross Scope 1 and Scope 2 emissions between your consolidated accounting group and other entities included in your response.	175
(7.26) Allocate your emissions to your customers listed below according to the goods or services you have sold them in this reporting period.	298
(7.27) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?	176
(7.28) Do you plan to develop your capabilities to allocate emissions to your customers in the future?	176
(7.30) Select which energy-related activities your organization has undertaken.	177

(7.30.1) Report your organization’s energy consumption totals (excluding feedstocks) in MWh.....	178
(7.30.6) Select the applications of your organization’s consumption of fuel.....	180
(7.30.7) State how much fuel in MWh your organization has consumed (excluding feedstocks) by fuel type.....	180
(7.30.14) Provide details on the electricity, heat, steam, and/or cooling amounts that were accounted for at a zero or near-zero emission factor in the market-based Scope 2 figure reported in 7.7.....	184
(7.30.16) Provide a breakdown by country/area of your electricity/heat/steam/cooling consumption in the reporting year.....	298
(7.45) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.....	188
(7.52) Provide any additional climate-related metrics relevant to your business.....	190
(7.53.1) Provide details of your absolute emissions targets and progress made against those targets.....	193
(7.54.2) Provide details of any other climate-related targets, including methane reduction targets.....	206
(7.54.3) Provide details of your net-zero target(s).....	208
(7.55.1) Identify the total number of initiatives at each stage of development, and for those in the implementation stages, the estimated CO2e savings.....	211
(7.55.2) Provide details on the initiatives implemented in the reporting year in the table below.....	211
(7.55.3) What methods do you use to drive investment in emissions reduction activities?.....	221
(7.73.2) Complete the following table for the goods/services for which you want to provide data.....	448
(7.73.3) Complete the following table with data for lifecycle stages of your goods and/or services.....	480
(7.73.4) Please detail emissions reduction initiatives completed or planned for this product.....	222
(7.74.1) Provide details of your products and/or services that you classify as low-carbon products.....	226
C9. Environmental performance - Water security.....	231
(9.1) Are there any exclusions from your disclosure of water-related data?.....	231
(9.1.1) Provide details on these exclusions.....	231
(9.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?.....	232
(9.2.2) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, how do they compare to the previous reporting year, and how are they forecasted to change?.....	240
(9.2.4) Indicate whether water is withdrawn from areas with water stress, provide the volume, how it compares with the previous reporting year, and how it is forecasted to change.....	243
(9.2.7) Provide total water withdrawal data by source.....	245

(9.2.8) Provide total water discharge data by destination	248
(9.2.9) Within your direct operations, indicate the highest level(s) to which you treat your discharge.	251
(9.3) In your direct operations and upstream value chain, what is the number of facilities where you have identified substantive water-related dependencies, impacts, risks, and opportunities?	254
(9.3.1) For each facility referenced in 9.3, provide coordinates, water accounting data, and a comparison with the previous reporting year.....	256
(9.3.2) For the facilities in your direct operations referenced in 9.3.1, what proportion of water accounting data has been third party verified?	262
(9.4) Could any of your facilities reported in 9.3.1 have an impact on a requesting CDP supply chain member?	265
(9.5) Provide a figure for your organization’s total water withdrawal efficiency.	265
(9.13) Do any of your products contain substances classified as hazardous by a regulatory authority?	266
(9.13.1) What percentage of your company’s revenue is associated with products containing substances classified as hazardous by a regulatory authority?	266
(9.14) Do you classify any of your current products and/or services as low water impact?.....	267
(9.15) Do you have any water-related targets?	268
(9.15.1) Indicate whether you have targets relating to water pollution, water withdrawals, WASH, or other water-related categories.	268
(9.15.2) Provide details of your water-related targets and the progress made.	269

C10. Environmental performance - Plastics 272

(10.1) Do you have plastics-related targets, and if so what type?	272
---	-----

C11. Environmental performance - Biodiversity 273

(11.2) What actions has your organization taken in the reporting year to progress your biodiversity-related commitments?	273
(11.3) Does your organization use biodiversity indicators to monitor performance across its activities?	273
(11.4) Does your organization have activities located in or near to areas important for biodiversity in the reporting year?	273

C13. Further information & sign off 275

(13.1) Indicate if any environmental information included in your CDP response (not already reported in 7.9.1/2/3, 8.9.1/2/3/4, and 9.3.2) is verified and/or assured by a third party?	275
(13.1.1) Which data points within your CDP response are verified and/or assured by a third party, and which standards were used?	275
(13.2) Use this field to provide any additional information or context that you feel is relevant to your organization's response. Please note that this field is optional and is not scored.	278
(13.3) Provide the following information for the person that has signed off (approved) your CDP response.	278

C1. Introduction

(1.3) Provide an overview and introduction to your organization.

(1.3.2) Organization type

Select from:

Publicly traded organization

(1.3.3) Description of organization

Xerox is a workplace technology company, building and integrating software and hardware for enterprises large and small. As customers seek to manage information and document workflows across digital and physical platforms, we deliver a seamless, secure, and sustainable experience. Whether inventing the copier, the Ethernet, the laser printer or more, Xerox has long defined the modern work experience and continues to do so with investments in artificial intelligence (AI), augmented reality (AR)-driven service experiences, robotic process automation (RPA) and other technologies that enable Xerox to deliver essential products and services to address productivity challenges of a hybrid workplace and distributed workforce. Xerox serves customers globally in North America, Central and South America, Brazil, Europe, Eurasia, the Middle East, Africa, and India. This geographic span allows us to deliver our technology and solutions to customers of all sizes, regardless of complexity or number of customer locations. Our business spans four primary offering areas: Workplace Solutions is made up of two strategic product groups, Entry and Mid-Range, much of which share common solutions, apps and ConnectKey software. Workplace Solutions revenues include the sale of products (captured primarily as equipment sales) as well as the supplies and associated technical service and financing of those products through FITTLE (captured as post sale revenue). Production Solutions (High-End) are designed for customers in the graphic communications, in-plant and production print environments with high-volume printing requirements. Our broad portfolio of presses and solutions provides black-and white and full-color, on-demand printing of a wide range of applications. Our xerographic and ink jet presses provide high-speed, high-volume cut-sheet printing, ideal for publishing, and transactional printing, including variable data for personalized content and one-to-one marketing, to the highest quality of color and embellishment requirements. Xerox Services includes a continuum of solutions and services that help our customers optimize their print and communications infrastructure, apply automation and simplification to maximize productivity, and ensure the highest levels of security. Xerox has the capability to support integration and document security on a global scale, which are critical factors for large enterprises. Our primary offerings in this area are Xerox Managed Print Services (MPS), Xerox Capture & Content Services (CCS) and Xerox Customer Engagement Services (CES) as well as IT Services. CCS and CES encompass a range of Digital Services that leverage our software capabilities in Workflow Automation, Personalization and Communication Software, Content Management Solutions, and Digitization Services. FITTLE is a global financing solutions business and currently offers lease financing for direct channel customer purchases of Xerox equipment and solutions through bundled lease agreements and lease financing to end-user customers who purchase Xerox equipment and solutions through our indirect channels. In addition to our four primary offering areas described above, a small portion of our revenues comes from non-core streams including paper sales in our developing market countries, and standalone software such as CareAR, DocuShare, and XMPie. In 2023 we took actions to divest businesses to focus on Xerox's core. We donated Palo Alto Research Center and divested the Xerox Research Center of Canada and Elem Additive, our 3D printing business. We established new partnerships with PEAC Solutions, an affiliate of HPS Investment Partners, to allow Xerox Financial Services, formerly FITTLE, to focus exclusively on financial solutions that support the sales of Xerox equipment and services. We also decided to reduce our presence in certain non-strategic markets with lower levels of profitability, such as paper and certain types of IT hardware. We go to

market with a client-centric, market-informed, and services-led approach, selling workplace products and services that support the new hybrid workplace and distributed workforce. We service our clients through our direct sales force or indirectly through distributors, independent agents, dealers, value-added resellers, systems integrators, and e-commerce marketplaces. In addition, we continue to focus on broadening our footprint to sell offerings to the small and mid-sized markets primarily in the U.S., U.K., and Canada through Xerox Business Solutions (XBS) which is comprised of regional core companies that provide office technology and services, including Managed IT Services, to small and mid-sized markets clients, and through the acquisitions of dealers and IT Services providers internationally. [Fixed row]

(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.

(1.4.1) End date of reporting year

12/31/2023

(1.4.2) Alignment of this reporting period with your financial reporting period

Select from:

Yes

(1.4.3) Indicate if you are providing emissions data for past reporting years

Select from:

Yes

(1.4.4) Number of past reporting years you will be providing Scope 1 emissions data for

Select from:

1 year

(1.4.5) Number of past reporting years you will be providing Scope 2 emissions data for

Select from:

1 year

(1.4.6) Number of past reporting years you will be providing Scope 3 emissions data for

Select from:

1 year

[Fixed row]

(1.5) Provide details on your reporting boundary.

	Is your reporting boundary for your CDP disclosure the same as that used in your financial statements?
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?

ISIN code - bond

(1.6.1) Does your organization use this unique identifier?

Select from:

No

ISIN code - equity

(1.6.1) Does your organization use this unique identifier?

Select from:

No

CUSIP number

(1.6.1) Does your organization use this unique identifier?

Select from:

No

Ticker symbol

(1.6.1) Does your organization use this unique identifier?

Select from:

Yes

(1.6.2) Provide your unique identifier

XRX

SEDOL code

(1.6.1) Does your organization use this unique identifier?

Select from:

No

LEI number

(1.6.1) Does your organization use this unique identifier?

Select from:

No

D-U-N-S number

(1.6.1) Does your organization use this unique identifier?

Select from:

Yes

(1.6.2) Provide your unique identifier

49591852

Other unique identifier

(1.6.1) Does your organization use this unique identifier?

Select from:

No

[Add row]

(1.8) Are you able to provide geolocation data for your facilities?

(1.8.1) Are you able to provide geolocation data for your facilities?

Select from:

Yes, for all facilities

(1.8.2) Comment

Latitude and longitude data is available for Xerox core Technology Business facilities. Geolocations may in some cases be for the nearest city, and not the specific Xerox facility address.

[Fixed row]

(1.8.1) Please provide all available geolocation data for your facilities.

Row 1

(1.8.1.1) Identifier

Wilsonville Manufacturing Plant (Wilsonville, OR)

(1.8.1.2) Latitude

45.313859

(1.8.1.3) Longitude

-123

(1.8.1.4) Comment

Supplies manufacturing plant located in Wilsonville, OR

Xerox Corporate Headquarters, Norwalk, CT
[Add row]

(1.24) Has your organization mapped its value chain?

(1.24.1) Value chain mapped

Select from:

Yes, we have mapped or are currently in the process of mapping our value chain

(1.24.2) Value chain stages covered in mapping

Select all that apply

Upstream value chain

(1.24.3) Highest supplier tier mapped

Select from:

- Tier 1 suppliers

(1.24.4) Highest supplier tier known but not mapped

Select from:

- Tier 2 suppliers

(1.24.7) Description of mapping process and coverage

As a major organization spending billions USD per year to support our operations, we recognize an obligation to actively manage our global supplier base and ensure these critical partners meet our high social, environmental, and ethical standards. As part of the purchasing process, we assess the quality, cost, delivery, and sustainability of all products and services, whether we purchase them from North America, Europe, or Asia. We source, contract, and purchase everything from transportation to raw materials and components. Our local presence in these regions leads to direct interaction with our suppliers. In 2008, we joined the Responsible Business Alliance (RBA), formerly known as the Electronic Industry Citizenship Coalition (EICC), to strengthen our approach to managing corporate social responsibility across the supply chain. An initial risk assessment is conducted to determine which suppliers pose higher corporate social responsibility risks. In 2020 we also conducted a qualitative forward-looking climate scenario analysis. This analysis covered all Xerox key facilities, and critical supplier locations, and includes site-specific analysis against a range of potential climate-related acute and long-term physical risks as well as transition risks. This qualitative analysis will be used to screen and prioritize material risks to supply chain continuity, for further assessment by our CSR Council, ERM specialists and upper management.

[Fixed row]

(1.24.1) Have you mapped where in your direct operations or elsewhere in your value chain plastics are produced, commercialized, used, and/or disposed of?

(1.24.1.1) Plastics mapping

Select from:

- No, and we do not plan to within the next two years

(1.24.1.5) Primary reason for not mapping plastics in your value chain

Select from:

- Not an immediate strategic priority

(1.24.1.6) Explain why your organization has not mapped plastics in your value chain

We have not mapped our use, production, and/or commercialization of plastics because it is not a material topic to our business. We currently do not have plans for future plastics mapping as we are prioritizing mapping other topics that we consider to be material to our business. However, going beyond current ecolabel requirements, our organization has increased the amount of post-consumer recycled plastic content in printers, multi-function devices, and toner cartridges. Since 2021, new product introductions have included printers and multi-function devices with 10-40% post-consumer recycled (PCR) plastic content, and toner cartridges with up to 39% reclaimed plastic. The drive to incorporate more PCR and post-consumer materials reuse into Xerox Equipment and Consumables will continue in the future. In addition, goals have been established to reduce single-use plastics and increase the amount of recycled plastic in packaging. We strive to eliminate, reduce, reuse, and recycle packaging whenever feasible, and product teams actively seek out more environmentally responsible packaging alternatives.

[Fixed row]

C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities

(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?

Short-term

(2.1.1) From (years)

0

(2.1.3) To (years)

5

(2.1.4) How this time horizon is linked to strategic and/or financial planning

We consider short-term risks to be those 0-5 years out; medium-term being 6-10 out; and long-term as being beyond 10 years

Medium-term

(2.1.1) From (years)

6

(2.1.3) To (years)

10

(2.1.4) How this time horizon is linked to strategic and/or financial planning

We consider short-term risks to be those 0-5 years out; medium-term being 6-10 out; and long-term as being beyond 10 years

Long-term

(2.1.1) From (years)

11

(2.1.2) Is your long-term time horizon open ended?

Select from:

Yes

(2.1.4) How this time horizon is linked to strategic and/or financial planning

We consider short-term risks to be those 0-5 years out; medium-term being 6-10 out; and long-term as being beyond 10 years
[Fixed row]

Select all that apply

- Customers
- Employees
- Local communities

- Investors
- Suppliers
- Regulators

(2.2.2.15) Has this process changed since the previous reporting year?

Select from:

- No

(2.2.2.16) Further details of process

Our Enterprise Risk Management (ERM) process strengthens our capability to assess, monitor and manage all categories of business risks across the value chain. ERM steering committee members meet monthly to assess all categories of emerging risks, risk appetite and occurrence probability considering all risk time tables (i.e., short, medium and long-term through our ERM process. Vital strategic and operational risks identified are approved by the Executive Management Committee (EMC) and reviewed annually by the Board. The ERM committee follows the guidelines of the Committee of Sponsoring Organizations of the Treadway Commission (COSO) that in 2017 integrated ESG risks including climate-change related risks and opportunities in its guidelines. We assess business risks based on the risk of failing to attain our strategic objectives. The committee also monitors action plans put in place to mitigate risk at the enterprise level. The corporation has tasked the CSR Council with the day-to-day monitoring and management of climate-related risks and opportunities. The CSR Council has the responsibility for monitoring and assessing climate change-related risks/opportunities and alerting ERM Committee of those relevant to the Enterprise. The CSR Council meets quarterly. Included in each meeting is an update of current, newly identified and/or emerging risks as well as the appropriate or necessary steps to take to mitigate the risk(s). The CSO leads coordination of the company's CSR activities, serving as the Executive Staff Director of our CSR Council. Annually the CSR Council is responsible for identifying and assessing the relevance of the corporations' CSR priorities using a materiality assessment process. This process considers relevant CSR topics impacting Xerox products, services and operations, including energy, GHG emissions and climate change strategy. In accordance with the GRI Standards we identify and report key risks and opportunities associated with CSR topics for the short (0-5 years), medium (5-10 years) and long term (10 years). The the projected risk profile upon completion of the risk mitigation plans. Opportunities are prioritized on relative effort (measured by cost, time and intangibles) and benefit (measured by revenue opportunity, reduced environmental impact and liability and intangibles). Annually, the EMC and Chief Sustainability Officer presents the results of the CSR materiality assessment and proposed action plan to the board for approval. Both physical and transitional risks and opportunities are managed in the same way. The process for managing climate-related risks and opportunities is also driven by the CSR council. The CSR Council is composed of executives who each monitor and manage a specific CSR topic area (including product development, environment and climate related issues, supply chain, etc.). Each member is supported by individuals with expertise in each topic area. The primary objective of the CSR Council is to provide oversight of the corporation's performance and management approach, including policies, goals, and strategies and to recommend actions to drive progress and integrate CSR and climate related issues into existing business practices.

(2.2.2.15) Has this process changed since the previous reporting year?

Select from:

- No

(2.2.2.16) Further details of process

Our manufacturing processes require an adequate supply of clean and inexpensive fresh water for manufacturing processes (e.g. EA toner operations) as well as sanitary needs and cooling. We take an integrated approach to ensure water risk is assessed across all direct operations in a holistic and robust way consistent with other sustainability issues and as part of our standard business practices: Our Board of Directors oversee our CSR program. Major operating units and corporate functions evaluate and manage site specific risks within their business. The CSR Council undertakes the annual CSR materiality assessment, considering relevant

risks impacting Xerox including water. In accordance with the GRI Standards we identify and report key risks and opportunities for the short term (0-5 years) and long term (6-10 years). The risk management process considers each of the countries in which Xerox operates, conducts business and sells products. In addition, the WRI Aqueduct Water Risk Atlas Tool and WWF Water Risk Filter were used to identify facilities within our Technology operations that we consider “water stressed regions” – that is, they are located in river basins classified as water scarce, exposed to physical water scarcity or high drought conditions, or at high risk of flooding. These tools were selected as they are robust and well recognized water risk assessment tools for identify water stressed locations and locations exposed to water risk. Our annual CSR materiality assessment aggregates information gained from the processes described above and considers relevant risks including water in our operations and supply chain.

(2.2.2.15) Has this process changed since the previous reporting year?

Select from:

- No

(2.2.2.16) Further details of process

We adopt the Responsible Business Alliance (RBA) Code of Conduct on CSR for our suppliers, which includes standards regarding water usage and pollution. To monitor compliance and suppliers' exposure to water risks, we use Self-Assessment Questionnaires and audits of key suppliers. All suppliers are subject to an initial risk assessment, and suppliers in the top 80% of production spend ("key suppliers") are asked to complete an annual self-assessment questionnaire that ranks them as low, medium and high risk suppliers based on a number of different factors with varying weights of importance. Our annual CSR materiality assessment aggregates information gained from the processes described above and considers relevant risks including water in our operations and supply chain.

[Add row]

(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?

(2.2.7.1) Interconnections between environmental dependencies, impacts, risks and/or opportunities assessed

Select from:

Yes

(2.2.7.2) Description of how interconnections are assessed

As part of Xerox's ISO 14001 Environmental Management System (EMS) at each facility, environmental aspects/dependencies and impacts are assessed to determine associated risks and opportunities on at least an annual basis. This process is carried out in three stages: 1. Identification - each site process and its related activities are analyzed to identify relevant environmental interactions (e.g. water, soil, air, natural resources, flora, fauna) and potential impacts 2. Evaluation – each aspect and impact is evaluated by considering legal or other stakeholder requirements, intensity, extent, occurrence and persistence. 3. Significance – the aspects that are significant are classified and actions to address those that have found to be significant are established. In 2023 we also updated our materiality assessment. Through the double materiality process, we identified a list of issues and associated impacts from Xerox priorities, strategies and internal documents. Among the many insights gathered, the assessment affirmed that climate change is one of the most critical issues for our business and our planet key insights and observations that will be used to drive our Enterprise Risk Management Strategy for the next several years.

[Fixed row]

(2.3) Have you identified priority locations across your value chain?

(2.3.1) Identification of priority locations

Select from:

- Yes, we have identified priority locations

(2.3.2) Value chain stages where priority locations have been identified

Select all that apply

- Direct operations

(2.3.3) Types of priority locations identified

Sensitive locations

- Areas of limited water availability, flooding, and/or poor quality of water

(2.3.4) Description of process to identify priority locations

Facilities identified as being in water-stressed regions via the WWF Water Basin Risk Filter tool and/or WRI Aquaduct assessment tool that are exposed to water risks that have the potential to have a substantive strategic or financial impact greater than our threshold of 2M include the Venray Manufacturing facility in Venray, Netherlands and operations in Oklahoma City, Yukon, OK.

(2.3.5) Will you be disclosing a list/spatial map of priority locations?

Select from:

- No, we have a list/geospatial map of priority locations, but we will not be disclosing it

[Fixed row]

(2.4) How does your organization define substantive effects on your organization?

Risks

(2.4.1) Type of definition

Select all that apply

- Qualitative
- Quantitative

(2.4.2) Indicator used to define substantive effect

Select from:

- Other, please specify :Financial Impact

(2.4.3) Change to indicator

Select from:

- Absolute increase

(2.4.5) Absolute increase/ decrease figure

2000000

(2.4.6) Metrics considered in definition

Select all that apply

- Frequency of effect occurring
- Time horizon over which the effect occurs
- Likelihood of effect occurring

(2.4.7) Application of definition

When identifying and assessing risks, Xerox defines substantive impact as any activity that causes a substantive impact/change (positive or negative) on revenue growth, profitability, operating costs, brand value/corporate reputation, innovation or customer satisfaction affecting either publicly reported financial results, changes to existing enterprise risk assessment results requiring mitigating action, or impacting component or product availability to the extent customer shipments or schedule are impacted. Climate change related risks are formally integrated in Xerox's Enterprise Risk Management process. We use a materiality threshold of 2 million impact to quantify substantive change.

Opportunities

(2.4.1) Type of definition

Select all that apply

- Qualitative
- Quantitative

(2.4.2) Indicator used to define substantive effect

Select from:

- Other, please specify :Financial impact

(2.4.3) Change to indicator

Select from:

- Absolute decrease

(2.4.5) Absolute increase/ decrease figure

2000000

(2.4.6) Metrics considered in definition

Select all that apply

- Frequency of effect occurring

- Time horizon over which the effect occurs
- Likelihood of effect occurring

(2.4.7) Application of definition

When identifying and assessing opportunities, Xerox defines substantive impact as any activity that causes a substantive impact/change (positive or negative) on revenue growth, profitability, operating costs, brand value/corporate reputation, innovation or customer satisfaction affecting either publicly reported financial results, changes to existing enterprise risk assessment results requiring mitigating action, or impacting component or product availability to the extent customer shipments or schedule are impacted. We use a materiality threshold of 2 million impact to quantify substantive change.

[Add row]

(2.5) Does your organization identify and classify potential water pollutants associated with its activities that could have a detrimental impact on water ecosystems or human health?

(2.5.1) Identification and classification of potential water pollutants

Select from:

- Yes, we identify and classify our potential water pollutants

(2.5.2) How potential water pollutants are identified and classified

Per Xerox's EHS policy, all workplaces and operations must implement processes to conserve water and other natural resources, eliminate the use of toxic and hazardous materials, prevent pollution, and recover, reuse, and recycle products and materials. For manufacturing operations, ISO 14001 certifications and routine EHS&S assessments ensure that water pollution risk is identified and appropriately addressed. Xerox toxicologists conduct a comprehensive assessment of new materials in our products to ensure conformance with applicable global registration, hazard communication, and storage, handling and disposal requirements. The company evaluates the disposition of materials used in our global operations annually and reports to government agencies under national toxic chemical release reporting regulations such as the USEPA's Toxic Release Inventory, the Canadian National Pollution Release Inventory, and the European Pollutant Release and Transfer Register. Wastewater discharges at manufacturing sites are monitored to validate compliance with local sanitary sewer discharge limits. Process wastewater is treated, as necessary, before being discharged into local sanitary sewers.

[Fixed row]

(2.5.1) Describe how your organization minimizes the adverse impacts of potential water pollutants on water ecosystems or human health associated with your activities.

Row 1

(2.5.1.1) Water pollutant category

Select from:

- Oil

(2.5.1.2) Description of water pollutant and potential impacts

Fuel oil and diesel is used for generator support functions in our manufacturing processes. Surface contamination from spills / accidental releases and POTW impacts associated with slug release could potentially impact and contaminate groundwater and other surface water bodies impacting aquatic life, agriculture (irrigation and livestock water), drinking water, and recreation and aesthetics.

(2.5.1.3) Value chain stage

Select all that apply

- Direct operations
- Upstream value chain
- Downstream value chain

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- Water recycling
- Resource recovery
- Upgrading of process equipment/methods
- Reduction or phase out of hazardous substances
- Provision of best practice instructions on product use
- Implementation of integrated solid waste management systems

- ☑ Requirement for suppliers to comply with regulatory requirements
- ☑ Industrial and chemical accidents prevention, preparedness, and response
- ☑ Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements
- ☑ Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience

(2.5.1.5) Please explain

The company has long worked toward minimizing the use of hazardous substances. Per Xerox's EHS policy, all workplaces and operations must implement processes to conserve water and other natural resources, eliminate the use of toxic and hazardous materials, prevent pollution, and recover, reuse, and recycle products and materials. For manufacturing operations, ISO 14001 certifications and routine EHS&S assessments ensure that water pollution risk is identified and appropriately addressed. Xerox toxicologists conduct a comprehensive assessment of new materials in our products to ensure conformance with applicable global registration, hazard communication, storage, handling and disposal requirements. We utilize best practices to prevent unwanted pollutants from entering waterways through surface contamination and runoff. Extensive sampling of wastewater discharged to sanitary and storm sewers ensures that discharged water meets our strict requirements. Wastewater discharges at manufacturing sites are monitored to validate compliance with local sanitary sewer discharge limits. Process wastewater is treated, as necessary, before being discharged into local sanitary sewers. We measure the success of these actions from the number of spills and accidental releases. Our goal is to proactively prevent any accidental release of regulated materials into the air, soil, and water.

[Add row]

C3. Disclosure of risks and opportunities

(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

Climate change

(3.1.1) Environmental risks identified

Select from:

Yes, both in direct operations and upstream/downstream value chain

Water

(3.1.1) Environmental risks identified

Select from:

Yes, both in direct operations and upstream/downstream value chain

Plastics

(3.1.1) Environmental risks identified

Select from:

No

(3.1.2) Primary reason why your organization does not consider itself to have environmental risks in your direct operations and/or upstream/downstream value chain

Select from:

- Not an immediate strategic priority

(3.1.3) Please explain

Plastics is not a material topic to our business. However, going beyond current ecolabel requirements, our organization has increased the amount of post-consumer recycled plastic content in printers, multi-function devices, and toner cartridges. Since 2021, new product introductions have included printers and multi-function devices with 10-40% post-consumer recycled (PCR) plastic content, and toner cartridges with up to 39% reclaimed plastic. The drive to incorporate more PCR and post-consumer materials reuse into Xerox Equipment and Consumables will continue in the future. In addition, goals have been established to reduce single-use plastics and increase the amount of recycled plastic in packaging. We strive to eliminate, reduce, reuse, and recycle packaging whenever feasible, and product teams actively seek out more environmentally responsible packaging alternatives.

[Fixed row]

(3.1.1) Provide details of the environmental risks identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.

Climate change

(3.1.1.1) Risk identifier

Select from:

- Risk1

(3.1.1.3) Risk types and primary environmental risk driver

Policy

- Changes to regulation of existing products and services

(3.1.1.4) Value chain stage where the risk occurs

Select from:

- Downstream value chain

(3.1.1.6) Country/area where the risk occurs

Select all that apply

- Canada
- United Kingdom of Great Britain and Northern Ireland
- United States of America

(3.1.1.9) Organization-specific description of risk

Xerox recognizes that our business is directly affected by climate related regulations, standards and voluntary certifications aimed at reducing energy use and GHG emissions of our products. If Xerox was unable to meet the energy efficiency requirements and unable to offer products that are as energy efficient as our competitors, there is a risk of reduced customer demand for our products and reduced market share. Changes to existing regulations, introduction of new regulations, or failure to comply with regulations requiring our products to meet certain levels of energy efficiency could also present an increase in operating cost to the business. For example, the EU is developing a new regulation, Ecodesign for Sustainable Products (ESPR), which will include performance standards for imaging equipment in connection with design for sustainability, including energy efficiency, circularity, product durability, reusability, upgradeability, repairability, recycled content, remanufacturing, and recycling. ESPR will replace the EU Imaging Equipment Voluntary Agreement previously in place. The US ENERGY STAR standard/eco-label specification for Imaging Equipment also introduces progressively more stringent energy efficiency requirements over time and for a broader range of products, including remanufactured products and professional imaging equipment. While not a regulation, compliance with Energy Star is a default requirement for many customers.

(3.1.1.11) Primary financial effect of the risk

Select from:

- Decreased revenues due to reduced demand for products and services

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

- Short-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

Likely

(3.1.1.14) Magnitude

Select from:

Medium

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

If Xerox was unable to meet the energy efficiency requirements and unable to offer products that are as energy efficient as our competitors, there is a risk of reduced customer demand for our products and decreased sales revenue. Changes to existing regulations, introduction of new regulations, or failure to comply with regulations requiring our products to meet certain levels of energy efficiency could also present an increase in operating cost to the business.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

Yes

(3.1.1.19) Anticipated financial effect figure in the short-term – minimum (currency)

0

(3.1.1.20) Anticipated financial effect figure in the short-term – maximum (currency)

1300000000

(3.1.1.25) Explanation of financial effect figure

If our products do not meet energy efficiency regulations and standards, there is potential for this to result in reduced demand for our products and decreased sales revenue. The extent of energy performance on final procurement decisions and hence the impact on revenue is unclear. However, our total annual equipment sales market share is 1.6 Billion and we estimate annual sales of our products with an eco-label (i.e. annual sales of all our entry and mid-range products) is 1.3 Billion per year (based on 2021 - 2023 sales data). If Xerox took no action to meet more stringent requirements introduced by applicable energy efficient regulations within the required time frame, and our competitors' products become more favorable to customers, than our products with an eco-label, this market share (1.3 Billion revenue per year) could be at risk. The estimated financial impact and potential loss of revenue is therefore estimated to range from 0 to 1.3 Billion per year as a worse case. A decrease in equipment sales will also have a secondary financial impact due to decreased sales of associated consumables, such as replacement toner cartridges and other post sales services such as maintenance.

(3.1.1.26) Primary response to risk

Compliance, monitoring and targets

Other compliance, monitoring or target, please specify :developments in regulations are tracked via formal processes

(3.1.1.27) Cost of response to risk

6600000

(3.1.1.28) Explanation of cost calculation

Costs to track product energy efficiency regulations, monitor product energy efficiency, and implement energy efficiency measures, are integrated in our normal business processes and are estimated to be approximately 6.6M annually. This estimate is based on 50% of the EHS&S budget devoted to market access (1.2M), 0.5% of the development teams RD&E budget (1.3M), and 4.1M for EPEAT reverse logistics to strip parts for reman and recycle.

(3.1.1.29) Description of response

To ensure that product design teams can incorporate timely environmental considerations, developments in regulations are tracked via formal processes including our Regulatory and Market Driven Initiatives (RMI) process. This gathers information from trade associations and regulatory tracking systems (e.g. Digital Europe, Imaging & Print Europe). We also solicit feedback from clients and local Xerox entities. The information gathered helps determine next steps e.g., joining a technical advisory team or collaborating on the development of new regulations. Case Study: Situation: US EPA's ENERGY STAR eco-label specification for imaging equipment continues to introduce progressively more stringent energy efficiency requirements over time. This could present an increase in operating cost to the business and if Xerox was unable to meet the requirements and offer products that are as energy efficient as our competitors, there is also a risk of reduced demand for our products and market share Task: Ensure product design teams are aware of changes to the US Energy Star standard and risks are mitigated Action: From

2019 -2021 Xerox served as a technical advisor for V3.0, 3.1, and 3.2 of the Energy Star specification for Imaging Equipment Result: V3.1 and 3.2 were finalized in late 2020 and 2021 and Xerox was fully informed and prepared for the changes. Since 2010, 100% of our eligible new products have achieved ENERGY STAR registration. Many existing products were re-engineered to be more energy-efficient to meet the 3.0 criteria Customer expectations are tracked through our Bid and Tender management process. Xerox manages compliance with product environmental requirements through our formal product design process and scientists in our materials research group evaluate aspects of energy, materials and sustainability to continually improve our products Our goal remains to have 100% of newly launched eligible products achieve EPEAT silver or gold and ENERGY STAR status.

Water

(3.1.1.1) Risk identifier

Japan

United States of America

(3.1.1.7) River basin where the risk occurs

Select all that apply

- Mississippi River
- Other, please specify :Kanagawa

(3.1.1.9) Organization-specific description of risk

We have outsourced a significant portion of our overall worldwide manufacturing operations to third parties and various service providers. Some Xerox suppliers are in locations that have historically been impacted by severe weather. Therefore, there is potential that those manufacturers may experience disruptions, manufacturing costs could be higher than planned and the delivery of our products could be impacted. Xerox suppliers could be impacted by more frequent business disruptions because of severe weather, resulting in a reduction/disruption in production capacity and electronic components that are unavailable or cannot be shipped to Xerox in a timely manner. If any of these risks were realized, we could experience interruptions in supply or increases in costs that might result in our being unable to meet customer demand for our products, damage our relationships with our customers and reduce our market share, all of which could adversely affect our results of operations and financial condition. For example, the Japanese tsunami in March 2011 resulted in business interruptions and additional costs to Xerox due to premium air-freight charges. In 2018 a number of our US suppliers in the Gulf of Mexico experienced short term closures due to impacts from Hurricanes Michael and Florence and flooding in Texas. Service calls in our Midwest NSP territories also experienced delays due to severe winter weather impacting travel.

(3.1.1.11) Primary financial effect of the risk

Select from:

- Increased direct costs

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

- Medium-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

- About as likely as not

(3.1.1.14) Magnitude

Select from:

Medium-low

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Should our key suppliers experience a disruption in their production capacity or be unable to operate due to severe weather events, damage to their facilities and/or impact their workforce, there would likely be increased operating and production costs to Xerox associated with sourcing and transporting the same products from alternative suppliers. The impact has not been fully quantified financially but would depend on the type and location of the supplier. For example, during the Japanese tsunami in March 2011 additional costs to Xerox to freight products by air was 20M. In 2017 (although not climate related) we experienced a spike in air freight volumes and costs to ease delays in our supply chain. In 2018, a number of our US suppliers in the Gulf of Mexico experienced short term closures due to impacts from Hurricanes Michael and Florence and flooding in Texas. Service calls in our Midwest NSP territories also experienced delays due to severe winter weather impacting travel.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

No

(3.1.1.26) Primary response to risk

Policies and plans

Amend the Business Continuity Plan

(3.1.1.27) Cost of response to risk

500000

(3.1.1.28) Explanation of cost calculation

Cost of response: Cost to run the Business Continuity program office (1 full time employee) to prepare, review, update and annually test the BRP, plus approximately 250 worldwide business continuity coordinators and practitioners, is integrated into our normal operations and businesses processes, but are estimated to be less than 500k/yr.

(3.1.1.29) Description of response

Xerox has formal Business Resumption Plans (BRP) for parts or subassemblies so that in the event of a climate related natural disaster there would only be a temporary disruption while orders are moved to alternate suppliers. We require that all 'critical' suppliers maintain BRP plans and we audit the plans. 'Critical' suppliers are identified based on: • Business risk: length of time to resume normal business, % of revenue, propensity for natural disasters • Revenue impact: amount spent, spread across Xerox product families Xerox Global Procurement department works with our supply chain partners to identify alternative suppliers in the event of a supply or services continuity issue. All our key suppliers in Asia have BRPs. Commodities are ranked according to criticality and resources are allocated to mitigate the impact should these commodities become unavailable during disasters, such as buffer inventory of up to 2 months or alternate sources. E.g. during the Japanese tsunami in 2011 our Business Continuity process ensured that business interruptions were minimized by sourcing and air freighting the same products from alternative suppliers.

Climate change

(3.1.1.1) Risk identifier

Select from:

Risk3

(3.1.1.3) Risk types and primary environmental risk driver

Acute physical

Storm (including blizzards, dust and sandstorm)

Select from:

Direct operations

(3.1.1.6) Country/area where the risk occurs

Select all that apply

- Netherlands
- United States of America

(3.1.1.9) Organization-specific description of risk

Xerox could be directly impacted by more frequent short-term business disruptions as a result of severe weather/natural disasters e.g., flooding and winter snow storms in locations where it operates, particularly in the Mid-West and Northeast United States. These events could impair our ability to effectively provide services to our customers and keep our operating costs aligned to our associated revenues and market requirements. For example:

- In 2012, 76 Xerox facilities were forced to close for a limited time and 102 customers in the United States were impacted by Super Storm Sandy.*
- In 2017, hurricanes Harvey, Irma and Maria caused irreparable damage to 4 company vehicles used by our technical services representatives/sales personnel (2 vehicles in Texas, 1 in Georgia and 1 in Puerto Rico).*
- In 2018, hurricanes Michael and Florence caused damage to some of our customers' equipment, which we were required to replace, and flooding to some company cars. Also in 2018, Typhoon Yutu caused power outages that lasted for days, requiring mold assessments and cleanup/remediation for Xerox office areas.*
- Published analyses show that the Netherlands may be faced with a wide range of climate risks, varying from storms, and flooding events to failure of critical infrastructure. This risk potentially impacts our Venray operation.*

(3.1.1.11) Primary financial effect of the risk

Select from:

- Increased direct costs

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

- Medium-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

- About as likely as not

(3.1.1.14) Magnitude

Select from:

Low

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Should our facilities experience a disruption in their production due to severe weather, e.g. damage to our facilities or impact to our workforce, there would be increased operating, production and, potentially also capital costs to Xerox. The impact would depend on the type and location of the facility. E.g. the total Net Impact cost to Xerox associated with Hurricane Sandy was estimated at 630K which included cost/damage to Xerox facilities (

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

Yes

(3.1.1.21) Anticipated financial effect figure in the medium-term – minimum (currency)

6000000

(3.1.1.22) Anticipated financial effect figure in the medium-term – maximum (currency)

20000000

(3.1.1.25) Explanation of financial effect figure

Our Business Resumption Plan analysis indicates that as a worst case, should one of our toner sites be unable to operate unexpectedly for a period of three months due to facility damage from severe weather, the additional direct costs to Xerox associated with emergency actions to switch toner production to one of our facilities in another location and higher shipping costs for raw materials and finished goods would likely be in the range of 2M - 4M for a single event. Assuming 3-5 such incident over a 10 year period gives total increased costs in the range of 6-20M over ten years (i.e. 2M x 3 events and 4M x 5 events). The estimated financial impact and potential increase in direct costs is therefore estimated to range from 6 Million to 20 Million over a ten year period.

(3.1.1.26) Primary response to risk

Policies and plans

- Amend the Business Continuity Plan

(3.1.1.27) Cost of response to risk

500000

(3.1.1.28) Explanation of cost calculation

Cost of response: Cost to run the Business Continuity program office (1 full time employee) to prepare, review, update and annually test the BRP, plus approximately 250 worldwide business continuity coordinators and practitioners, is integrated into our normal operations and businesses processes, but are estimated to be less than 500k/yr.

(3.1.1.29) Description of response

Resiliency and effective response to any type of event, environmental or otherwise, that may impact our ability to achieve our business objectives is a critical business requirement. These objectives include: the safeguarding of human and capital assets; cash flow; reputation and brand. At Xerox, preparedness is achieved through a management system known as the Business Continuity Assurance Process (BCAP). Business continuity is a critical component of the Xerox risk management portfolio. It includes four disciplines: • Emergency Preparedness: response to localized emergencies • Crisis Management: coordination of resources to mitigate the impact of significant emergencies • IT Disaster Recovery: recovery of electronic systems/data • Business Resumption: processes implemented to fully resume business activities The Business Continuity process includes business impact analyses (including physical climate risk such as storms and temperature extremes), self-assessments/audits, periodic validations, and plan status reporting to Xerox management. Each individual site has a Business Resumption Plan, which allows them to prepare for risks of climate changes at their site. Annually plan drills are conducted and risks such as hurricanes and floods are included in the drills. Geographic risks including availability of water and flooding potential are included in the decision checklist used by Corp. Real Estate when considering site expansions and acquisitions.

Water

(3.1.1.7) River basin where the risk occurs

Select all that apply

- Mississippi River

(3.1.1.9) Organization-specific description of risk

Xerox operations rely on water to operate, including manufacturing-related uses (process, cleaning and cooling water uses) as well as office-based uses (drinking and sanitary water) that are located in regions that are currently classified as water scarce. Our Oklahoma City manufacturing plant (located in Yukon, OK) uses water as part of a wet chemistry process to produce raw materials used in our toner manufacturing operation, and also relies on plentiful water for steam generation and cooling towers/chillers to support production operations. Changing precipitation patterns causing extremes such as drought events could lead to localized energy and water resource shortages causing disruption in our operations and therefore could also increase the cost of doing business (though not disproportionately from competitors). This risk potentially impacts OKC operations located in the Mississippi River Basin. Impacts are likely to be short-term but could cause disruption to ongoing manufacturing processes or result in increases to the cost of water, and therefore increases in operating costs

(3.1.1.11) Primary financial effect of the risk

Select from:

- Increased direct costs

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

- Medium-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

(3.1.1.14) Magnitude

Select from:

- Low

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Impacts are likely to be short-term but could cause disruption to ongoing manufacturing processes or result in increases to the cost of water, and therefore increases in operating costs.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

- Yes

(3.1.1.21) Anticipated financial effect figure in the medium-term – minimum (currency)

125000

(3.1.1.22) Anticipated financial effect figure in the medium-term – maximum (currency)

1800000

(3.1.1.25) Explanation of financial effect figure

Estimate includes fixed and variable costs associated with a period of full interruption ranging from one week to one month. Financial estimate based on Xerox proprietary information on cost of production, business continuity response options, and Xerox post sale profit margin for any impacts to sales revenue.

(3.1.1.26) Primary response to risk

Infrastructure, technology and spending

Adopt water efficiency, water reuse, recycling and conservation practices

(3.1.1.27) Cost of response to risk

500000

(3.1.1.28) Explanation of cost calculation

Costs for infrastructure replacement vary annually depending on approved projects. Cost for the Business Continuity program office (3 full time employees) to prepare, review and update and annually test the BRP, plus approximately 50 worldwide business continuity coordinators, are integrated into our normal operations and businesses processes, but are estimated to be less than 500k/yr.

(3.1.1.29) Description of response

As part of our commitment to conserve resources, we monitor water withdrawal across the worldwide facilities of our Technology business. In January 2021 we set a new corporate target to reduce water consumption by 20% by 2030 from a 2020 baseline. We also regularly evaluate opportunities to reduce water use. E.g. in Oklahoma City we have identified oversized infrastructure, such as chillers, and replaced them with more appropriately sized equipment and/or with different style chillers that do not require cooling towers. Improvement projects are supplemented with business resiliency activities. Resiliency and effective response to any type of

events, environmental or otherwise that may impact Xerox's ability to achieve our business objectives is a critical business requirement. Preparedness is achieved through a management system known as the Business Continuity Assurance Process (BCAP). Business continuity is a critical component of the Xerox risk management portfolio. It includes four disciplines: • Emergency Preparedness: the response to localized emergencies. • Crisis Management: the coordination of resources to mitigate the impact of significant emergencies. • IT Disaster Recovery: the recovery of electronic systems or data. • Business Resumption: the processes implemented to fully resume business activities. The Business Continuity process includes business impact analyses (including water related risks such as flooding and water supply interruption), self-assessments /audits, periodic validations, and plan status reporting to Xerox management. For example, each individual site has a Business Resumption Plan for their site, which allows them to prepare for water related risks at their site. The availability of sufficient quantities of water is also included in the questionnaire conducted by Corporate Real Estate when making business decisions regarding site expansion and acquisitions.

(3.2.11) Please explain

Water-related risks in Yukon, OK and the greater Oklahoma City area center around drought and water availability issues due to rising temperatures and long-term drying trends. Additional risks are present due to severe storms, increased precipitation, and potentially catastrophic floods. Changing precipitation patterns causing extremes such as drought events could lead to energy and water resource shortages causing disruption in our operations and therefore could also increase the cost of doing business (though not disproportionately from competitors). Resiliency and effective response to any type of events, environmental or otherwise that may impact Xerox's ability to achieve our business objectives is a critical business requirement. Preparedness is achieved through a management system known as the Business Continuity Assurance Process (BCAP). Business continuity is a critical component of the Xerox risk management portfolio. Select from:

Downstream value chain

(3.6.1.5) Country/area where the opportunity occurs

Select all that apply

- United States of America

(3.6.1.8) Organization specific description

An increase in regulations and standards requiring products to meet certain levels of energy efficiency not only creates an increased awareness and demand among consumers but presents a global opportunity for Xerox to provide more products that are more energy efficient compared to our competitors. It creates a marketing opportunity to showcase products that are industry leaders, increasing demand for Xerox products and in turn, our market share. For example, the US ENERGY STAR standard/eco-label specification for Imaging Equipment introduces progressively more stringent energy efficiency requirements overtime and for a broader range of products. While not a regulation, compliance with Energy Star is a default requirement for many customers and is regularly referenced in public sector procurement requirements, along with other eco-labels, including Blue Angel and EPEAT. Over the last 24 months Xerox has launched 15 new printers/multifunction printers – all achieving Energy Star/EPEAT certification. Included with these are new models are ConnectKey-enabled products. A key attribute to the ConnectKey ecosystem is that it is cloud-ready and enables information to be moved to and from the cloud without the security risks that commonly exist. Cloud computing is an alternative to large data centers and is being recognized worldwide as less energy intensive than data centers while generating fewer GHGs.

(3.6.1.9) Primary financial effect of the opportunity

- Virtually certain (99–100%)

(3.6.1.12) Magnitude

Select from:

Medium-low

(3.6.1.14) Anticipated effect of the opportunity on the financial position, financial performance and cash flows of the organization in the selected future time horizons

The increase in development and demand for more energy efficient and low emission products presents a potential for Xerox to provide more products that are more energy efficient compared to our competitors thus increasing demand for Xerox products and in turn our sales revenue. While energy efficiency criteria grow in prominence in public and private procurement specifications, it is uncertain as to whether energy performance has a substantial impact on the final procurement decisions; hence the impact on revenue is unclear.

(3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

Yes

(3.6.1.17) Anticipated financial effect figure in the short-term - minimum (currency)

0

(3.6.1.18) Anticipated financial effect figure in the short-term – maximum (currency)

80000000

(3.6.1.23) Explanation of financial effect figures

Our total equipment market share is 1.6 Billion per year. Assuming developments in technology and ecolabel requirements would enable us to expand our range of eco label and low carbon products and services, resulting in a maximum 5% increase in sales, our sales revenue could increase by up to 80M/yr. (i.e. 5% of 1.6Billion) (based on 2021 -2023 sales data). The estimated financial impact and potential increase in revenue is therefore estimated to range from 0 to 80 Million per year.

(3.6.1.24) Cost to realize opportunity

6600000

(3.6.1.25) Explanation of cost calculation

Costs to track product energy efficiency regulations, monitor product energy efficiency, and implement energy efficiency measures, are integrated into our normal operations, and are estimated to approximately 6.6M annually. This estimate is based on 50% of the EHS&S budget devoted to market access (1.2M), 0.5% of the development teams RD&E budget (1.3M), and 4.1M for EPEAT reverse logistics to strip parts for reman and recycle.

(3.6.1.26) Strategy to realize opportunity

To realize this opportunity developments in regulations are tracked via a number of formal processes including our Regulatory and Marketing Initiative Management System. The system includes gathering information from trade associations and regulatory tracking systems. Xerox manages compliance with product environmental requirements through our formal product design process, in which design requirements are implemented to achieve the performance expectations set by regulations and certifications. Our goal remains to have 100% of newly launched eligible products achieve EPEAT silver or gold and ENERGY STAR status. In 2018, we became the first to register printing devices for EPEAT in 11 EU Countries. Case Study: Situation: the US EPA's ENERGY STAR eco-label specification for imaging equipment continues to introduce progressively more stringent energy efficiency requirements over time. An increase in regulations and standards requiring products to meet certain levels of energy efficiency not only creates an increased awareness and demand among consumers, it creates a marketing opportunity to showcase products that are industry leaders. This increases demand for Xerox products, and in turn our market share. Task: Ensure the opportunity for Xerox to provide more products that are more energy efficient compared to our competitors and the US Energy Star standard are maximized Action: From 2019-2021 Xerox served as a technical advisor for the EPA for V3.0, 3.1, and 3.2 of the Energy Star specification for Imaging Equipment. Result: Versions 3.1 and 3.2 specification revisions were recently finalized and went into effect in late 2020 and 2021 and Xerox was fully informed and prepared for the changes. 100% of new, eligible products were registered with Energy Star. Xerox continues to invest in R&D of energy-efficient product designs to meet future customer demands. We direct our R&D investments to areas such as data analytics, business process automation, and reducing the environmental impact of digital printing.

(3.6.1.8) Organization specific description

We recognize that water efficiency initiatives may also result in financial savings. For example, eliminating once through cooling systems in air compressors at Webster is estimated to have saved the company 136,000 per year in water costs and water efficiency projects implemented at Webster between 2010 and 2014 is estimated to have saved the company 156,000 per year in water costs. Improvements to the sanitary sewer infrastructure at the Webster, NY facility implemented in 2020 and 2021 are anticipated to save up to another 150,000 per year in water discharge costs. Assuming an additional 10% saving in water use and sewer discharge costs in the US and Canada, would save 0.2M based on Xerox's current water utility spend in these countries.

(3.6.1.9) Primary financial effect of the opportunity

Select from:

- Reduced indirect (operating) costs

(3.6.1.10) Time horizon over which the opportunity is anticipated to have a substantive effect on the organization

(3.6.1.12) Magnitude

Select from:

- Medium-low

(3.6.1.13) Effect of the opportunity on the financial position, financial performance and cash flows of the organization in the reporting period

We recognize that water efficiency initiatives may also result in financial savings. For example, eliminating once through cooling systems in air compressors at Webster is estimated to have saved the company 136,000 per year in water costs. Decreasing use of water either by optimization of manufacturing processes or by recycling or reusing water could result also in reduced cost to manufacture goods or offer services to customers from both reduced water supply costs and in many cases reduced energy costs.

(3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

- Yes

(3.6.1.16) Financial effect figure in the reporting year (currency)

592000

(3.6.1.23) Explanation of financial effect figures

Eliminating once through cooling systems in air compressors at Webster is estimated to have saved the company 136,000 per year in water costs and water efficiency projects implemented at Webster between 2010 and 2014 is estimated to have saved the company 156,000 per year in water costs. Assuming a 100,000 annual reduction in Webster, NY discharge costs from sewer infrastructure improvements and an additional 10% savings (0.2M) in water use and sewer discharge costs in the US and Canada from other water reduction initiatives, is anticipated to save about 592k per year based on Xerox's current water utility spend in these countries. (136,000 156,000 100,000 200,000 592,000)

(3.6.1.24) Cost to realize opportunity

100000

(3.6.1.25) Explanation of cost calculation

The costs to realize the opportunity include implementing water efficiency projects and initiatives and is estimated to be approximately 100,000 per year. For example, measures we have invested in to reduce water consumption at the Webster, NY campus include for example: • Ongoing sewer repairs • Install water meters • Valve replacements • Project to eliminate once-through cooling tower water We have therefore calculated the annual costs to realize this opportunity, based on the average budget for operational projects with associated water savings and efficiency related operational improvements over the last three years.

(3.6.1.26) Strategy to realize opportunity

To manage this opportunity for cost saving we have an ongoing water reduction program and monitor water withdrawal across the worldwide manufacturing, distribution and R&D facilities of our Technology business against our voluntary water reduction target. For instance, we set a corporate target to reduce absolute water withdrawals by 35% by 2020 against a 2010 baseline, achieved that target, and set a new target of 20% reduction in absolute water use by 2030 against a 2020 baseline to further ratchet down water use. We continue to achieve reductions through a combination of conservation initiatives that include: • Elimination of once-through cooling systems in air compressors; • Implementation of improvements to the sanitary sewer infrastructure; and • Recycling reverse osmosis rejects water as make-up water in cooling towers

(4.1.3) Types of directors your board or equivalent is comprised of

Select all that apply

Executive directors or equivalent

Independent non-executive directors or equivalent

(4.1.4) Board diversity and inclusion policy

Select from:

Yes, and it is publicly available

(4.1.5) Briefly describe what the policy covers

Our Corporate Governance Guidelines dictate that diversity should be considered by the Corporate Governance Committee in the director identification and nomination process. Although the Board does not establish specific goals with respect to diversity, the Board's overall diversity is a significant consideration in the director nomination process. This means that the Corporate Governance Committee seeks nominees who bring a variety of business backgrounds, experiences, and perspectives to the Board. In February 2020, the Board amended our Corporate Governance Guidelines to require that the initial list of candidates from which new, management-supported director nominees are chosen by the Corporate Governance Committee should include, but not necessarily be limited to, qualified women

and minority candidates. We believe that the backgrounds and qualifications of the directors, considered as a group, should provide a broad diversity of experience, professions, skills, geographic representations, knowledge, and abilities that will allow the Board to fulfill its responsibilities.

- Reviewing and guiding the assessment process for dependencies, impacts, risks, and opportunities

(4.1.2.7) Please explain

Board level responsibility for CSR, including climate related issues lies jointly between the CEO and the Corporate Governance Committee (CGC) of the Board of Directors. The CEO's climate-related responsibilities include: • Developing climate-related strategy, • Monitoring GHG targets • Considering climate-related issues when guiding business strategy, risk management policies and overseeing major capital expenditures, acquisitions, and divestitures • Approving the release of climate-related information As a board member, and leader of the Executive Management Committee (EMC), the CEO provides the day-to-day linkage between the board, the EMC and our management level CSR Council. and also participates as a member of the Council. The CSR Council reports to and advises the CEO and COO. The CSR Council is chaired by a member of the Executive Committee, and the Chief Sustainability Officer serves as the Executive Staff Director of the CSR Council. This structure ensures that the business is held accountable for the CSR goals and ensures the CSR Council reflects real business input and requirements. The Corporate Governance Committee (CGC) of the Board of Directors oversees significant shareholder relations issues and CSR matters, including climate change related risks and opportunities specifically. On an annual basis, the Chief Sustainability Officer is responsible for confirming the corporate CSR priorities with the CEO and Corporate Governance Committee of the board; presenting the results of the annual CSR materiality assessment and proposed action plan for Board approval; and providing the CEO and the Corporate Governance Committee of the board with a status of CSR progress and recommendations going forward. At additional times during the year the Board is advised by the CSO when there are any meaningful internal or external CSR-related developments. The CEO has frequent and available access to the Board, enhancing speed of implementation of decisions proposed by the CSR Council and approved by the Executive Management Committee. In 2020, the CEO and the Board made the decision to approve a proposal from the CSR Council that Xerox commit to becoming net zero carbon emitting by 2040, climate action that builds upon and goes beyond our recently approved science-based GHG targets. As part of increased commitment to climate action, the CEO and Board also approved the addition of ESG metrics into the executive and management bonus structure. In 2022 we introduced ESG as a weighted metric after introducing it as a modifier in 2021, to further reinforce the significance of these objectives. Each year's ESG metrics include an explicit climate-related metric.

Other policy applicable to the board, please specify :Corporate Governance Committee Charter

(4.1.2.4) Frequency with which this environmental issue is a scheduled agenda item

Select from:

Scheduled agenda item in some board meetings – at least annually

(4.1.2.5) Governance mechanisms into which this environmental issue is integrated

Select all that apply

Reviewing and guiding the assessment process for dependencies, impacts, risks, and opportunities

Overseeing the setting of corporate targets

Monitoring progress towards corporate targets

Overseeing and guiding the development of a business strategy

(4.1.2.7) Please explain

Board level responsibility for CSR, including water-related issues lies jointly between the CEO and the Corporate Governance Committee (CGC) of the Board of Directors. The CEO's water-related responsibilities include: • Developing water-related strategy, • Monitoring water targets • Considering water-related issues when guiding business strategy, risk management policies and overseeing major capital expenditures, acquisitions, and divestitures • Approving the release of environmental information, including water related info As a board member, and leader of the Executive Management Committee (EMC), the CEO provides the day-to-day linkage between the board, the EMC and our management level CSR Council (and is also a member). The CSR Council reports to and advises the CEO. The CSR Council is chaired by a member of the Executive Committee, and the Chief Sustainability Officer serves as the Executive Staff Director of the CSR Council. This structure ensures that the business is held accountable for the CSR goals and ensures the CSR Council reflects real business input and requirements. The Corporate Governance Committee (CGC) of the Board of Directors oversees significant shareholder relations issues and CSR matters, including water related risks and opportunities as applicable. On an annual basis, the Chief Sustainability Officer is responsible for confirming the corporate CSR priorities with the CEO and Corporate

Governance Committee of the board; presenting the results of the annual CSR materiality assessment and proposed action plan for Board approval; and providing the CEO and the Corporate Governance Committee of the board with a status of CSR progress and recommendations going forward. The CEO has frequent and available access to the Board, enhancing speed of implementation of decisions proposed by the CSR Council and approved by the Executive Management Committee. At least annually the Board conducts a review of the Company's long-term strategic plans and principal issues. Periodically during the year, the Board receives strategy updates from members of senior management of the Company. For example, annually, the Chief Sustainability Officer (and Executive Director of the CSR Council):

- Confirms the corporate CSR (including water related) priorities with the CEO and Corporate Governance Committee of the board;
- Presents the results of the annual CSR materiality assessment and proposed action plan to the board for their approval; and
- Provides the CEO and the Corporate Governance Committee of the board with a status of CSR (including water-related) progress and recommendations going forward.

(4.3.1) Provide the highest senior management-level positions or committees with responsibility for environmental issues (do not include the names of individuals).

Climate change

(4.3.1.1) Position of individual or committee with responsibility

Executive level

- Chief Sustainability Officer (CSO)

(4.3.1.2) Environmental responsibilities of this position

Dependencies, impacts, risks and opportunities

- Assessing environmental dependencies, impacts, risks, and opportunities
- Managing environmental dependencies, impacts, risks, and opportunities

Policies, commitments, and targets

- Measuring progress towards environmental corporate targets
- Measuring progress towards environmental science-based targets
- Setting corporate environmental targets

Strategy and financial planning

- Developing a business strategy which considers environmental issues
- Implementing a climate transition plan

Other

- Providing employee incentives related to environmental performance

(4.3.1.4) Reporting line

Select from:

- Reports to the Chief Operating Officer (COO)

(4.3.1.5) Frequency of reporting to the board on environmental issues

Select from:

Annually

(4.3.1.6) Please explain

The Chief Sustainability Officer (CSO) holds the highest-level management position with direct responsibility for assessing and managing climate related issues. The CSO reports to the Chief Growth and Disruption Officer who reports to the COO. In this position, the CSO is responsible for overseeing our environmental (including climate related) governance and leads coordination of the company's CSR activities, serving as Executive Staff Director of the CSR Council, communicating climate-related issues to the CEO and Board, and ensuring the implementation of climate related decisions made by the CSR Council and/or board. The CSO monitors climate related issues through the CSR Council which is composed of senior leaders and meets quarterly to review the company's policies, goals, strategies, and actions to drive progress including GHG reduction and developments with potential CSR impacts. An individual from the EMC chairs the CSR Council to provide guidance, ensure that the business is held accountable for the CSR goals and that the CSR Council reflects real business requirements. The CSO, with the CSR Council, makes climate-related decisions as a team and by consensus, but the CSO is ultimately responsible for bringing the climate related issues or topics to the CSR council for approval. The EHS&S group reports directly to the CSO. The primary objective of the CSR Council is to provide centralized oversight of the corporation's performance and management approach, including policies, goals, strategies and to recommend actions to drive progress and integrate CSR and climate related issues into existing business practices. This is achieved through: • Annually evaluating the relevance of the corporations' CSR priorities using a materiality assessment process; • Identifying issues and opportunities and addressing them in a timely manner with responsible operations; • Communicating Xerox's CSR initiatives, recognition and achievements internally and externally

Water

(4.3.1.6) Please explain

The Chief Sustainability Officer (CSO) holds the highest-level management position with direct responsibility for assessing and managing water related issues. The CSO reports to the Chief Growth and Disruption Officer who reports to the COO and Vice-Chairman of the Board. In this position, the CSO is responsible for overseeing our environmental (including water-related) governance and leads coordination of the company's CSR activities, serving as Executive Staff Director of the CSR Council, communicating sustainability-related issues to the CEO and Board, and ensuring the implementation of water related decisions made by the CSR Council and/or board. Water risk has been identified as a low materiality issue for Xerox and therefore typically the CSO will only report to the Board on water related issues as and when important matters arise. The Environment, Health, Safety & Sustainability (EHS&S) group reports directly to the Chief Sustainability Officer.
[Add row]

(4.5) Do you provide monetary incentives for the management of environmental issues, including the attainment of targets?

Climate change

(4.5.1) Provision of monetary incentives related to this environmental issue

Select from:

Yes

(4.5.2) % of total C-suite and board-level monetary incentives linked to the management of this environmental issue

5

(4.5.3) Please explain

In 2022 we introduced ESG as a weighted metric after introducing it as a modifier in 2021, to further reinforce the significance and criticality of these objectives. Beginning in 2022 the ESG metrics were extended to the bonus calculation for all management level employees. Each year's ESG metrics include an explicit climate-related metric. In 2023 the ESG metric was weighted at 20% and included the following objectives (weightings): Environmental (5%) - establish GHG inventory and data collections system; Safety (5%) - improve workplace safety, and Social (10%) - provide a balanced workforce by improving representation of women and diverse employees at professional levels

Water

(4.5.1) Provision of monetary incentives related to this environmental issue

Select from:

No, and we do not plan to introduce them in the next two years

(4.5.3) Please explain

In 2020, the Compensation Committee of the Board of Directors established an Environmental, Social and Governance payout modifier that will increase or decrease the otherwise applicable performance-based payout for executive officers of the company. This incentive is in addition to already existing incentives available to a wide range of Xerox employees. Effective starting in 2021, Xerox Managers and the Board of Directors have been added to those eligible for climate-related

management incentives. In 2022 we introduced ESG as a weighted metric after introducing it as a modifier in 2021, to further reinforce the significance and criticality of these objectives. As water has been determined to not be a material aspect for Xerox, these compensation metrics do not include management of water-related issues.

[Fixed row]

(4.5.1) Provide further details on the monetary incentives provided for the management of environmental issues (do not include the names of individuals).

Climate change

(4.5.1.1) Position entitled to monetary incentive

Board or executive level

Corporate executive team

(4.5.1.2) Incentives

Select all that apply

Bonus - % of salary

(4.5.1.3) Performance metrics

Resource use and efficiency

Improvements in emissions data, reporting, and third-party verification

(4.5.1.4) Incentive plan the incentives are linked to

Select from:

Short-Term Incentive Plan, or equivalent, only (e.g. contractual annual bonus)

(4.5.1.5) Further details of incentives

Our performance-based Management Incentive Plan (MIP) is an annual cash incentive based on the achievements of financial metrics (80% weighting) and ESG metrics (20% weighting) set for the year. We include ESG metrics in the compensation criteria for all senior management, which covers climate change, a balanced workforce, succession planning, board refreshment, and workplace safety. In 2022 we introduced ESG as a weighted metric (20%) for all bonus-eligible employees, after introducing it as a modifier in 2021, to further reinforce the significance and criticality of these objectives. For the ESG portion of the MIP, the Compensation Committee evaluated performance relative to the following objectives (weightings): Environmental (5%) - establish GHG inventory and data collections system; Safety (5%) - improve workplace safety, and Social (10%) - provide a balanced workforce by improving representation of women and diverse employees at professional levels. For each metric, subject to that metric's weighting: (i) the payout for achieving target-level performance is 100% of the target incentive amount; (ii) the payout for achieving maximum-level performance is 200% of the target incentive amount; (iii) the payout for achieving threshold-level performance is 50% of the target incentive amount; and (iv) if performance results for the metric are below threshold level, achievement for that metric is zero and is weighted in the overall payout factor calculation.

(4.5.1.6) How the position's incentives contribute to the achievement of your environmental commitments and/or climate transition plan

Inclusion of ESG metrics in the Annual Cash Incentive underscores the importance of our environment, safety, and people in a measurable and objective way. The 2021 environmental metric was to approve and accelerate Net Zero target to 2040 from the original 2050 timeline and establish the emissions reduction roadmap. The 2022 metric required employees to complete a Xerox-specific Net Zero training. 97% of all employees completed this training, overachieving the target. For 2023, the environmental metric was: Enhance GHG inventory and data collection systems. In 2024, ESG remains a metric in the MIP given its importance to Xerox's strategy and culture and is weighted at 10%. For 2024, the environmental goal is: • Climate Change (5% weight): GHG reduction aligned to our 2030 and 2040 goal of becoming carbon neutral. This remains a fundamental and strategic commitment to our business strategy and an environmental top priority.

Select all that apply

Race to Zero Campaign

Science-Based Targets Initiative (SBTi)

UN Global Compact

We Mean Business

Other, please specify :DOE Better Climate Challenge

(4.10.3) Describe your organization's role within each framework or initiative

Our approach to sustainability has included partnerships to accelerate progress. In 2021, our targets for all three scopes received approval from the Science Based Targets Initiative (SBTi), validating that the goals we set align with actions necessary to limit the worst impacts of climate change. We have officially joined the UNFCCC's Race to Zero and SBTi's Business Ambition for 1.5C campaigns, aligning our climate mitigation targets with the most ambitious aim of the Paris Agreement and what science dictates is necessary to reduce the destructive impacts of climate change on human society and nature: to limit global warming to 1.5C. We are a member of We Mean Business, a global nonprofit coalition working with the world's most influential businesses, to act on climate change. As a member, we established science-based GHG emission reduction targets. The U.S. Department of Energy (DOE) is challenging organizations to set ambitious, portfolio-wide GHG emission reduction goals. This new effort provides additional opportunities for peer exchange and technical assistance to meet the urgent call to mitigate the impacts of climate change. Through the Better Climate Challenge, organizations can partner with DOE to reduce portfolio-wide GHG emissions (scope 1 & 2) by at least 50% within 10 years. Our work aligns with the United Nations Sustainable Development Goals (SDGs), and in 2023 Xerox joined the UN Global Compact, demonstrating our commitment to this framework.

Row 1

(4.11.2.1) Type of indirect engagement

Select from:

- Indirect engagement via a trade association

(4.11.2.4) Trade association

North America

- Other trade association in North America, please specify :Information Technology Industry Council (ITI)

(4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

- Climate change

(4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

- Consistent

(4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

- Yes, and they have changed their position

(4.11.2.8) Describe how your organization’s position is consistent with or differs from the organization or individual’s position, and any actions taken to influence their position

“ITI strongly supports international cooperation and partnership on addressing climate change, and welcomed the United States’ re-entry into the Paris Agreement of United Nations Framework Convention on Climate Change and support the United Nations 2030 Agenda for Sustainable Development and its Sustainable Development Goals (SDGs) as part of climate change solutions and social equity.” “To address industry’s climate footprint, ITI recommend that U.S. policies – both for government and industry – reflect mandatory targets that meet or exceed recommendations by the Intergovernmental Panel on Climate Change (IPCC). Further, ITI supports government investment in clean technologies, infrastructure, and programs.” “ITI announced its participation in the United Nations’ Race to Zero campaign as an Accelerator. As governments across the world work to implement the goals of COP26, ITI’s involvement in the Race to Zero campaign advances its commitment to continuing the call for climate leadership on a healthy, resilient, net-zero carbon recovery that prevents future threats, creates green jobs, and unlocks inclusive, sustainable growth.” <https://www.itic.org/policy/environment-sustainability/climate-change> <https://www.itic.org/news-events/news-releases/iti-joins-united-nations-race-to-zero-campaign> ITI’s climate position aligns with Xerox’s climate position on emissions reduction, investment in innovative technology, and industry collaboration to mitigate climate issues.

(4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

21875

(4.11.2.10) Describe the aim of this funding and how it could influence policy, law or regulation that may impact the environment

In 2022 & 2023 Xerox engaged with ITI to provide input into ITI’s comments on the SEC’s proposed rules and additional upcoming regulations regarding climate-related disclosure and requirements.

(4.11.2.11) Indicate if you have evaluated whether your organization’s engagement is aligned with global environmental treaties or policy goals

(5.1.2) Provide details of the outcomes of your organization’s scenario analysis.

Climate change

(5.1.2.1) Business processes influenced by your analysis of the reported scenarios

Select all that apply

- Risk and opportunities identification, assessment and management
- Resilience of business model and strategy

(5.1.2.2) Coverage of analysis

Select from:

- Organization-wide

(5.1.2.3) Summarize the outcomes of the scenario analysis and any implications for other environmental issues

The 2DS scenario showed that Xerox’s greatest transition risks and opportunities lay in competitors acting faster with new technologies or more appealing offerings (including sustainability services). The 4DS scenario was used to determine highest physical risks. We used company data to map cost-intensive Xerox and supplier operations against assessments of sea level rise, extreme storms, extreme precipitation, river and coastal flooding, and extreme temperature, drought and fire risks to categorize the expected degree of impact for each location. Our Dundalk (Ireland) and Venray (Netherlands) manufacturing and research sites were found to be at highest physical risk due to sea level rise, drought and fire. Multiple suppliers located in coastal areas were found to be at high risk of sea level rise and flooding, extreme storms and extreme temperature risk. This qualitative analysis is being used to screen and prioritize material risks to Xerox facilities and supply chain continuity by our CSR Council, Enterprise Risk Management (ERM) specialists and upper management. Senior Management, and other decisionmakers will further evaluate specific risks that climate change presents to the Xerox business model and key assets and will help highlight the risks, opportunities, priorities and necessary actions that must be accounted for in wider strategic business decisions. As an outcome of the Climate Scenario Analysis, “transition risk” (specifically, the reputational and operational risks associated with potentially not achieving Xerox’s science-based GHG target and net zero by 2040 goals) and physical risks (specifically, supply chain interruption due to climate change) have been added to the ERM major risks dashboard and are monitored monthly by ERM specialists and upper management.

Water

(5.1.2.1) Business processes influenced by your analysis of the reported scenarios

Select all that apply

- Risk and opportunities identification, assessment and management

(5.1.2.2) Coverage of analysis

Select from:

- Organization-wide

(5.1.2.3) Summarize the outcomes of the scenario analysis and any implications for other environmental issues

As an outcome of the Climate Scenario Analysis, water-related physical risks (specifically, supply chain interruption due to climate change) have been added to the Enterprise Risk Management (ERM) major risks dashboard and are monitored monthly by ERM specialists and upper management. Each month one of the risk categories is selected for a “deep dive” analysis. In 2021 this included assessment of the risk of sea level rise, flooding, drought and fire risks to our manufacturing facilities and supply chain –especially our Dundalk (Ireland) and Venray (Netherlands) manufacturing and research sites and key suppliers located in coastal that were found to be in the climate scenario analysis.

[Fixed row]

(5.2) Does your organization’s strategy include a climate transition plan?

(5.2.1) Transition plan

Select from:

- Yes, we have a climate transition plan which aligns with a 1.5°C world

(5.2.3) Publicly available climate transition plan

- Yes

(5.2.4) Plan explicitly commits to cease all spending on, and revenue generation from, activities that contribute to fossil fuel expansion

Select from:

- No, and we do not plan to add an explicit commitment within the next two years

(5.2.6) Explain why your organization does not explicitly commit to cease all spending on and revenue generation from activities that contribute to fossil fuel expansion

Spending on and revenue generation from activities that contribute to fossil fuel expansion (e.g. investment in infrastructure for extraction of fossil fuels e.g. oil and gas wells, pipelines, liquefied natural gas terminal etc. Investment in new fossil fuel power plants and Investment in research and development of products that rely on fossil fuels to function) is not relevant to Xerox's operations.

(5.2.7) Mechanism by which feedback is collected from shareholders on your climate transition plan

Select from:

- We have a different feedback mechanism in place

(5.2.8) Description of feedback mechanism

Xerox conducted extensive, proactive investor outreach to facilitate candid discussions about our business and strategy. the company hosted calls with investors and solicited feedback about ESG reporting metrics, diversity and executive compensation

(5.2.9) Frequency of feedback collection

Select from:

- Annually

(5.2.10) Description of key assumptions and dependencies on which the transition plan relies

The Core Principles of our Roadmap to Net Zero comprise: 1. Partnerships & Collaborations - We will work with our partners and clients to improve our business to be a catalyst for wider change. 2. Leadership & Resilience - Integrate low carbon focus, climate education and ESG compensation into business transition. 3. Innovation-driven - Our innovation areas have potential to reduce the world's carbon footprint, among other benefits

(5.2.11) Description of progress against transition plan disclosed in current or previous reporting period

Key Accomplishments in our Road to Net Zero include: - Science Based Targets Initiative (SBTi) approved (2016 baseline) - Executive ESG comp metrics - Joined SBTi Business Ambition for 1.5C and UNFCCC Race to Zero - All employees and board climate training - ESG comp metrics expanded to all managers - ESG Reporting Solution & GHG Accounting System By the end of 2023 we had achieved 58.9% reduction in Scope 1 and 2 GHG emissions and 34.5% reduction in Scope 3 emissions from our 2016 baseline.

(5.2.12) Attach any relevant documents which detail your climate transition plan (optional)

xerox-2040-net-zero-roadmap.pdf

(5.2.13) Other environmental issues that your climate transition plan considers

Select all that apply

No other environmental issue considered

[Fixed row]

(5.3) Have environmental risks and opportunities affected your strategy and/or financial planning?

(5.3.1) Environmental risks and/or opportunities have affected your strategy and/or financial planning

Select from:

Yes, both strategy and financial planning

(5.3.2) Business areas where environmental risks and/or opportunities have affected your strategy

Select all that apply

Products and services

Upstream/downstream value chain

Investment in R&D

Operations

[Fixed row]

(5.3.1) Describe where and how environmental risks and opportunities have affected your strategy.

Products and services

(5.3.1.1) Effect type

Select all that apply

- Risks
- Opportunities

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

- Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Our products and services have been impacted by: • current regulations, standards and voluntary certifications requiring our products to meet levels of energy efficiency including the EU Energy Related Products Directive, the US ENERGY STAR standard/eco-label, EPEAT and Blue Angel (policy and legal risk) • changes in consumer preferences toward energy efficient products (market and reputation risk) • opportunities to develop low emissions products and business continuity products. Consequently, one of the most important components of our immediate/short term (0-5 year) business strategy is to create value for our customers and shareholders by enhancing the sustainability benefits of our products and services and innovating business solutions. We offer more sustainable digital printing and document management solutions that can improve our customers' environmental performance and mitigate climate change by providing alternative solutions to replace current energy intensive processes and behaviors. Our product design is governed by global regulations and Xerox Corporate EHS&S Policy, which states that Xerox will "Address climate change by reducing the carbon footprint of our operations, products, and services". For example: • LCAs have demonstrated that paper is the largest lifecycle energy and CO2 impact of printing. This prompted us to decide to develop new products and services that help customers understand their paper consumption. • In 2017, Xerox launched 29 new ConnectKey-enabled products. This software enables information to be moved to/from the cloud. Cloud computing is an alternative to large data centers and is being recognized worldwide as less energy intensive. • In early 2019, Xerox decided to update its phase gate-based product delivery process to integrate sustainability goals into product design. As part of this process, Xerox mandated that ALL new eligible products achieve EPEAT Gold. This strategic decision ensures that the Xerox product line continues to improve energy efficiency, promote reuse / recycling and responsible end of life management. All EPEAT Gold products are supported by product life cycle assessments (LCAs). As examples, the new PrimeLink and AltaLink products that Xerox launched in 2019 and 2020 meet EPEAT Gold requirements in US, Canada and eleven EU countries.

Upstream/downstream value chain

(5.3.1.1) Effect type

- Risks
- Opportunities

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

- Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Our supply chain has been impacted by extreme weather such as storms and floods (physical climate related risk). We outsource a significant portion of our manufacturing operations to third parties. Some Xerox suppliers are in locations that have historically been impacted by severe weather. E.g. the Japanese tsunami in March 2011 resulted in business interruptions and additional costs to Xerox due to premium air-freight charges. The impact of this risk to our supply chain is considered low as we have a large and diverse supply chain and to date a small proportion of our production suppliers have been impacted by extreme weather. However, to manage and mitigate the impacts of this risk as part of our immediate/short term (0-5 year) business strategy Xerox has developed formal Business Resumption Plans for parts or subassemblies, so that in the event of a climate related natural disaster the disruption would be temporary while orders are moved to the alternate supplier. We also require that all 'critical' Technology suppliers maintain an acceptable business resumption plan and we audit the plans on a routine basis. Xerox Global Procurement works with our supply chain partners to identify alternative suppliers in the event of a supplier issue that causes a supply or services continuity issue. In 2020 we conducted a qualitative forward-looking climate scenario analysis. This analysis covered all Xerox key facilities, and critical supplier locations, and includes site-specific analysis against a range of potential climate-related acute and long-term physical risks as well as transition risks. This qualitative analysis will be used to screen and prioritize material risks to supply chain continuity, for further assessment by our CSR Council, ERM specialists and upper management. In this way the Climate Scenario Analysis will also serve as a tool for further educating the Board, Senior Management, and other decision makers to the specific risks that climate change presents to the Xerox business model and key assets and will help highlight the risks, opportunities, priorities and necessary actions that must be accounted for in wider strategic business decisions.

Investment in R&D

(5.3.1.1) Effect type

- Risks
- Opportunities

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Our investments in product R&D have been impacted by: • current regulations, standards and voluntary certifications requiring our products meet certain levels of energy efficiency including the EU Energy Related Products Directive, the US ENERGY STAR standard/eco-label, EPEAT and Blue Angel (policy and legal risk); • changes in consumer preferences toward more energy efficient products (market and reputation risk); and • the opportunity to develop more low emissions products and business continuity products. The need to improve the energy efficiency of our imaging equipment continues to be a high priority for Xerox. One of the most important components of our longer term (10 year) strategy is to create value for our customers and our shareholders by enhancing the sustainability benefits of our products and innovating business solutions and technologies. We direct our R&D investments and innovation to align with our strategic growth opportunities in areas including: simplifying, automating and enabling business processes on the cloud via developing new products with flexible platforms to enable greater business process agility and resilience; and reducing the energy use and environmental impact of digital printing including cloud based printing; and cleantech and energy innovation programs

Operations

Select all that apply

Risks

Opportunities

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Our operations have been impacted by physical climate related risks. For example, • In 2012, 76 Xerox facilities were forced to close for a limited time and 102 customers in the US were impacted by Superstorm Sandy • In 2014, severe winter weather forced the closure of our American Logistics Center • In 2018, hurricanes Michael and Florence caused damage to some of our customers' equipment (which we were required to replace). • In 2020, western wildfires threatened our

Wilsonville, Oregon manufacturing facility. While no facility damage occurred, smoke forced a two-day closure of the facility. This risk is managed via a system known as the Business Continuity Assurance Process (BCAP) which includes business impact analyses (including physical climate related risk such as temperature extremes), self-assessment, periodic validations, and plan status reporting to Xerox management. Each site has a Business Resumption Plan which allows them to prepare for risks of climate changes at their site. Our operations are also impacted by opportunities to reduce operating costs and improve our reputation and competitive advantage through implementing a company-wide energy and GHG reduction program. Developing solutions that reduce GHG emissions and address stakeholder concerns are integrated into Xerox business strategy. One of the most important components of our immediate/short term (0-5 year) focus is to invest in technologies that reduce energy consumption in our own operations and to continue to make progress towards our GHG and energy reduction goals. We have an ongoing energy reduction program and monitor energy consumption against our voluntary energy reduction target. To support our strategic commitments and business strategy, we set targets and long-term goals to reduce energy use and GHG emissions, and accelerate targets as they are achieved: • In 2018 we established a target of 25% reduction in energy use and GHG emissions by 2025 from a 2016 baseline • By 2019 we had already achieved approximately 75% of our goal so we set a more aggressive, corporate-wide science-based target aligned with a 1.5C scenario. This new target is to reduce Scope 1 and 2 GHG emissions by 60% by 2030 from the same 2016 baseline, with an ultimate goal of net zero greenhouse gas emissions by 2040. • We also set (and achieved) a goal for 20% renewable energy use by 2020
[Add row]

(5.3.2) Describe where and how environmental risks and opportunities have affected your financial planning.

Row 1

(5.3.2.1) Financial planning elements that have been affected

Select all that apply

- Revenues
- Indirect costs
- Capital expenditures
- Acquisitions and divestments

(5.3.2.2) Effect type

Select all that apply

- Risks
- Opportunities

(5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

Climate change

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

Climate related risks and opportunities are factored into multiple elements of our annual financial planning process including: • Revenue planning / forecasting; • Capital and operating cost planning and expenditure for each business area; and • Decisions regarding acquisitions and divestments. For example: Our Net Zero roadmap is used as a guide when developing financial and operational plans. As part of improving energy efficiency of our sales fleet, our UK operations instituted a policy to procure hybrid or electric vehicles only. Should any of our facilities or key suppliers experience a disruption in production capacity or be unable to operate due to physical climate related risk (severe weather/natural disasters), damage to our facilities and/or impact to our workforce there would likely be increased production costs to Xerox. For example, in 2012, 76 Xerox facilities were forced to close for a limited time due to Hurricane Sandy. The associated additional Net Impact cost to Xerox was estimated at 630K which included cost/damage to Xerox facilities (

[Add row]

(5.4) In your organization's financial accounting, do you identify spending/revenue that is aligned with your organization's climate transition?

	Identification of spending/revenue that is aligned with your organization's climate transition
	Select from: <input checked="" type="checkbox"/> No, but we plan to in the next two years

[Fixed row]

(5.9) What is the trend in your organization’s water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?

(5.9.1) Water-related CAPEX (+/- % change)

0

(5.9.2) Anticipated forward trend for CAPEX (+/- % change)

0

(5.9.3) Water-related OPEX (+/- % change)

0

(5.9.4) Anticipated forward trend for OPEX (+/- % change)

-20

(5.9.5) Please explain

CAPEX: No water related capital spending (CAPEX) occurred in 2022 or 2023 and no CAPEX spend is anticipated in 2024, so this is indicated as a 0% change. Spend on water projects are short -term and reported as operational expenses not CAPEX. OPEX: In 2022 Xerox spent 1,960k for water/sanitary sewer consumption and discharge, repair work on sanitary sewers and a water meter install. For 2023 the spend was similar for water consumption and discharge, sewer repair and a dry cooler project on Building 208 therefore a 0% change compared to 2022. For 2024 the outlook spending is for a reduction on water consumption and discharge (due to the elimination of a once-through Cooling tower water at Bldg 208 on the Webster Campus in 2023) but similar for ongoing sewer repair and a project to replace Building 331 valve therefore a 20% reduction compared to 2023. Costs for water testing and monitoring are not comprehended here but are insignificant in comparison.

[Fixed row]

(5.10) Does your organization use an internal price on environmental externalities?

(5.10.1) Use of internal pricing of environmental externalities

Select from:

- No, but we plan to in the next two years

(5.10.3) Primary reason for not pricing environmental externalities

Select from:

- Not an immediate strategic priority

(5.10.4) Explain why your organization does not price environmental externalities

Incorporating internal carbon pricing into decisions has been identified as one of the emissions reduction activities and milestones that form part of our roadmap to achieving net zero by 2040.

Procurement spend

(5.11.2.4) Please explain

We adopt the Responsible Business Alliance (RBA) Supplier Code of Conduct (SCC), which includes Labor, H&S, and environmental (climate, water usage & pollution) standards. All suppliers are subject to an initial risk assessment, to determine which suppliers pose higher corporate social responsibility risks and those in the top 80% of production spend ("key suppliers") complete an annual self-assessment questionnaire that ranks them as low, medium and high risk suppliers based on a number of different factors with varying weights of importance. Suppliers flagged in the risk assessment (in addition to suppliers deemed critical to our supply chain) are required to complete detailed questionnaires. For suppliers identified as high risk, we are required to have 80% of those suppliers audited annually with an on-site audit.

Water

(5.11.2.1) Supplier engagement prioritization on this environmental issue

Select from:

- Yes, we prioritize which suppliers to engage with on this environmental issue

(5.11.2.2) Criteria informing which suppliers are prioritized for engagement on this environmental issue

Select all that apply

- In line with the criteria used to classify suppliers as having substantive dependencies and/or impacts relating to water
- Procurement spend

(5.11.2.4) Please explain

(5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action

As part of the product eco-label evaluation and registration process we regularly communicate and collaborate with our key critical production suppliers to help determine future opportunities for reductions in the lifecycle GHG impacts of products such as the use of materials with low embodied carbon or improving energy efficiency through better design. Globally, we have approximately 4,100 suppliers however 83% are indirect /services suppliers and 17% are production suppliers. 1% of our suppliers are 'critical' production suppliers who manufacture and assemble our products. We prioritize our engagement with a subset of our 'critical' production suppliers, which represent 80% of our spend. Lifecycle assessments of our products show that use and maintenance phase have a considerable impact in carbon emissions, thus Xerox's focus is on reducing emissions from our services related to these products. Xerox has long collaborated with our key critical production suppliers to incorporate environmental considerations into product design. We measure success of the engagement based on the number of products registered to Energy Star, EPEAT, and other eco-labels or voluntary measures, with the threshold for success being to maintain launching 100% of new eligible office products with EPEAT Silver or Gold certification. Each eco-label includes several categories of environmental attributes that span the lifecycle of electronic products including, for example, material selection and recycled content, energy conservation and end of life management. For instance, Xerox participates in a collaborative effort every year with our partner, Fuji Business Innovations, to identify environmental characteristics to improve and to set goals that are rolled into product requirements. Successful supplier collaborations were achieved in 2022 resulted in launching 5 new printers with at least 10% post-consumer recycled plastic, with 2 of these printers containing over 20% post-consumer recycled plastic and achieving EPEAT gold for all 5 products.

(5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action

Based on the risk assessments and questionnaires, we annually select suppliers for compliance review or audit. A total of 129 suppliers have been audited and assessed off-site through self-assessment questionnaires (SAQs), which represents 97% of total spend. Trained Xerox personnel conduct the audits on-site. Both audits and compliance reviews follow the Responsible Business Alliance (RBA) Audit format, which addresses environmental issues including minimizing energy consumption and tracking GHG emissions. Xerox recognizes that the primary value of an onsite compliance assessment is not in the identification of issues at a site, but in the correction of those issues. We want to recognize those sites that demonstrate their commitment to climate change through verified closure of the issues identified in a site audit. We have set our net zero goal to 2040. Xerox holds a high standard for its suppliers as it relates to meeting this goal of lessening our impact on the environment. During the audit, we classify areas of nonconformance as “priority,” “major,” “minor” or “for review.” We provide each supplier with a performance assessment and work with our suppliers to close gaps identified in the on-site audits. Xerox reserves the right to audit and evaluate compliance to our supplier’s contractual commitments and our policies. It is our expectation that all suppliers comply with the RBA Code of Conduct and commitment to climate change and corporate responsibility. The Validated Assessment Process (VAP) provides us with assurance in identifying risks and driving improvements and robust management systems for labor, ethics, health, safety, and environmental conditions in the supply chain. Transparency is the key to a successful audit. As part of RBA participation, energy consumption and all relevant Scopes 1 and 2 GHG emissions are to be tracked, documented, and publicly reported against the GHG goal. This information is available to Xerox for use in evaluating supplier’s climate targets and progress. Non-compliance by a supplier with climate-related requirements will result in Xerox taking the appropriate actions to remedy the situation. Success is measured by receiving at least 80% of our supplier’s assessments with a designation of “achieving or maintaining”.

(5.11.7.10) Engagement is helping your tier 1 suppliers meet an environmental requirement related to this environmental issue

Select from:

[Add row]

(5.11.9) Provide details of any environmental engagement activity with other stakeholders in the value chain.

Climate change

(5.11.9.1) Type of stakeholder

Select from:

- Customers

(5.11.9.2) Type and details of engagement

Education/Information sharing

- Share information about your products and relevant certification schemes
- Share information on environmental initiatives, progress and achievements

(5.11.9.3) % of stakeholder type engaged

Select from:

- 100%

(5.11.9.4) % stakeholder-associated scope 3 emissions

Select from:

- 76-99%

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

We offer digital multifunction printers and energy-efficient solutions to our customers to anticipate and address their increased demand for more sustainable and energy efficient products. For example, approximately 50% less energy is used by one multifunction printer than the combined annual consumption of the individual products it replaces. Each new generation of Xerox products offers more functionality and uses less energy – saving our customers money and reducing their carbon footprint. We therefore, regularly provide information to the public and all (100%) our global customers about the energy and sustainability credentials of our products, including energy related certification schemes, partners and more via our website, corporate blogs, social media and collaterals.

(5.11.9.6) Effect of engagement and measures of success

We measure success of our customer engagement through recognition awards and ratings we receive. For recognition in the format of a 'best of' list, success is measure by achieving the list e.g. ENERGY STAR Partner of the year, Corporate Knights 100, Quocirca Sustainability Leaders. For recognition that has different tiers of assessment, participating and receiving an adequate rating is a requirement in most cases. However, success is measured by achieving the top 2 tiers of the assessment indicates success e.g. Ecovadis Gold or Platinum rating, CDP A or B ratings, EPEAT Silver or Gold ecolabel. We are confident the messages are making an impact. Case studies showing how our products and services helped customers reduce the total number of devices used, increase the number of energy-efficient devices used and therefore reduce energy use are available on our website (<https://www.xerox.com/en-us/insights/type-case-study>). As an example, a major U.S. financial services company replaced 1,200 personal printers with 172 energy-efficient multifunction devices bringing significant sustainability gains, including energy/GHG savings and less toner and paper usage. Through our Print Smart program we also helped another company reduce its paper consumption by 6.3 million printed pages. The resulting environmental impacts included reductions more than 500,000 pounds of greenhouse gas emissions.

None

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

Each year, Xerox conducts regular outreach with our investors to facilitate candid discussions about our business and strategy. In 2023, we hosted 23 calls with 6 different investors who were engaged and provided feedback about ESG reporting metrics, diversity and executive compensation practices. The feedback provided valuable insights to the senior leadership team and helped inform our CSR corporate goalsetting. Management also hosted small group meetings with investors at investor conferences and non-deal roadshows.

(5.11.9.6) Effect of engagement and measures of success

We measure success of our investor engagement through recognition awards and ratings we receive.

C7. Environmental performance - Climate Change

(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?

(7.1.1.1) Has there been a structural change?

Select all that apply

Yes, a divestment

(7.1.1.2) Name of organization(s) acquired, divested from, or merged with

N/A - Xerox

(7.1.1.3) Details of structural change(s), including completion dates

In April 2023, Xerox completed the donation of its Palo Alto Research Center (PARC) subsidiary to Stanford Research Institute International (SRI), a nonprofit research institute. In July 2023 Xerox completed the sale of Xerox Research Center of Canada (XRCC), the Canadian research division of Xerox, to Myant Capital Partners.

[Fixed row]

(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

(7.1.2.1) Change(s) in methodology, boundary, and/or reporting year definition?

Yes, a change in methodology

(7.1.2.2) Details of methodology, boundary, and/or reporting year definition change(s)

In 2024, Xerox updated its 2023 GHG inventory methodology with the introduction of new GHG accounting software to expand the data processing capabilities, reduce process risks, and improve reporting accuracy. Major updates to the process include: • sourcing emission factors was performed manually. This has been updated to emission factors managed by the software provider; • transformation calculations were performed manually in spreadsheets. This has been updated to uploading data to the software via pre-defined spreadsheet templates; • use of US EPA emission factors were previously used for the global inventory. This has been updated to use UK Defra emission factors for UK operations where possible.

[Fixed row]

(7.1.3) Have your organization's base year emissions and past years' emissions been recalculated as a result of any changes or errors reported in 7.1.1 and/or 7.1.2?

(7.1.3.1) Base year recalculation

Select from:

Yes

(7.1.3.2) Scope(s) recalculated

Scope 1

Scope 2, location-based

Scope 2, market-based

Scope 3

(7.1.3.3) Base year emissions recalculation policy, including significance threshold

Base year emissions are retroactively adjusted to reflect significant changes, such as mergers, acquisitions, and divestitures, within Xerox that would compromise the consistency and relevance of the reported GHG emissions information. While the decision to recalculate GHG emissions relating to either the baseline or subsequent years is made on a case by case basis, Xerox uses a reference "significance threshold" of 5% (increase or decrease) to aid with the decision making (i.e., if recalculation of a data sample indicates that the change(s) will affect the overall total by 5% or greater than that previously disclosed, the historical dataset is recalculated).

(7.1.3.4) Past years' recalculation

Yes

(7.3) Describe your organization's approach to reporting Scope 2 emissions.

	Scope 2, location-based	Scope 2, market-based	Comment
	<i>Select from:</i> <input checked="" type="checkbox"/> We are reporting a Scope 2, location-based figure	<i>Select from:</i> <input checked="" type="checkbox"/> We are reporting a Scope 2, market-based figure	<i>No additional comment</i>

[Fixed row]

(7.4.1) Provide details of the sources of Scope 1, Scope 2, or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure.

Row 1

(7.4.1.1) Source of excluded emissions

Due to the small size of emissions and difficulties in data collection, the following 'de-minimis' sources are excluded from the inventory: • Stationary combustion emissions from emergency generator fuel oil and diesel use • Mobile emissions from LPG forklift truck use • Mobile emissions from onsite security, emergency, maintenance, mail vehicles and lawn care equipment used by Xerox.

(7.4.1.2) Scope(s) or Scope 3 category(ies)

Select all that apply

Scope 1

(7.4.1.3) Relevance of Scope 1 emissions from this source

Select from:

Emissions are not relevant

(7.4.1.10) Explain why this source is excluded

In line with recognized carbon accounting guidance, the assessment of GHG emissions includes all identified sources anticipated to make a material contribution (more than 5%) to Xerox total GHG inventory. A number of small sources of minor Scope 1 emissions however, have been deemed to be immaterial / 'de minimis' and therefore excluded from our emissions inventory. For example, emissions from refrigerant HFCs used in manufacturing sites has been estimated using data available for a selection of sites and deemed to be 'de-minimis' (

(7.4.1.11) Explain how you estimated the percentage of emissions this excluded source represents

Stationary combustion emissions estimated using 2016 data from Webster as worse case/proxy for other manufacturing sites. Webster is the biggest manufacturing site and represents the absolute worst case. Mobile LPG use is captured for Europe. Most forklifts trucks are electrical No data available although welding is performed very infrequently, emissions from combustion of welding gas is anticipated to be significantly lower than combustion from emergency generators for example (
[Add row]

(7.5) Provide your base year and base year emissions.

Scope 1

(7.5.1) Base year end

12/31/2016

(7.5.2) Base year emissions (metric tons CO₂e)

165245

(7.5.3) Methodological details

Using the Persefoni carbon accounting software, utility data is uploaded using either the fuel-based method if natural gas consumption is known for a facility or the floor-based method if consumption is not known for a facility. Persefoni uses CBECS estimates for the location-based method. US EPA emission factors are used for natural gas consumption. Emissions from Xerox's mobile fleet are taken from fuel and distance-based data and are calculated within Persefoni using EPA factors for US locations and DEFRA factors for outside the US. Xerox uses Carbon Dioxide to clean parts as an alternative to solvent cleaning at the Webster facility. The amount of Carbon Dioxide used is directly obtained from purchase records and uploaded to Persefoni. Fugitive emissions estimations are uploaded into Persefoni and multiplied by each gas's Global Warming Potential. Due to difficulties in data collection and the small size of the emissions, emissions from fire extinguishers and fire suppressants are excluded.

Scope 2 (location-based)

(7.5.1) Base year end

12/31/2016

(7.5.2) Base year emissions (metric tons CO₂e)

104205

(7.5.3) Methodological details

Xerox's indirect location-based emissions are determined using the methodology presented in the Climate Leaders guidance documents and the GHG Protocol. Once the amount of purchased electricity or steam is totaled (kWh), it is uploaded into Persefoni, where emissions are determined using the latest available sub-regional emission factors from the EPA's Emissions & Generation Resource Integrated Database (eGRID). In cases where utility data is unavailable, electricity use is estimated based on building specifics, location, and floor area. Persefoni uses CBECS to estimate electricity. Emissions generated from purchased electricity in countries other than the United States are determined (in Persefoni) using the latest country specific emission factors available from the IEA or UK Defra.

Scope 2 (market-based)

(7.5.1) Base year end

12/31/2016

(7.5.2) Base year emissions (metric tons CO2e)

103615

(7.5.3) Methodological details

The reported and quantified energy consumption from location-based data uploads are utilized as the energy consumption for market-based emissions. US EPA eGRID sub region emission factors were used in the US, AIB country specific residual factors for EMEA countries included in AIB, and IEA emission factors are used for other countries. Scope 2 'market-based' emissions have been determined using the following 'contractual instruments' for Xerox's purchased electricity: Contracts with electricity suppliers to supply renewable electricity to Xerox Sites sites with accompanying evidence, Regional and National consumption (Residual Mix) emission factors for European countries, Regional and National consumption (Residual Mix) emission factors for European countries.

Scope 3 category 1: Purchased goods and services

(7.5.1) Base year end

12/31/2016

(7.5.2) Base year emissions (metric tons CO2e)

1156439

(7.5.3) Methodological details

To quantify emissions for Purchased Goods and Services, Xerox obtains supplier spend data from Xerox Global Spend Management, maps Xerox spend sub-categories to EEIO industry categories or tag for exclusion, inputs spend data, supplier name, and EEIO categories to Persefoni, remove spend for specific suppliers where emissions data have been provided or more detailed quantification method is utilized to improve accuracy, and upload emissions data to replace adjusted spend. Excluded spend from this list include amounts from suppliers that Xerox pays only for financial pass-through (payroll, commission, etc) or government payments. Additionally, suppliers that provided transportation services are included in Category 4 instead of Category 1. Spend on Capital Goods is adjusted rather than excluded. Adjustments to supplier spend are made to avoid double counting emissions. The intent of adjustments is to improve the data quality used in the GHG inventory. Current adjustments include capital goods, spend on equipment procured from OEM suppliers, and business travel spend data related to corporate card programs.

Scope 3 category 2: Capital goods

(7.5.1) Base year end

12/31/2016

(7.5.2) Base year emissions (metric tons CO2e)

24069

(7.5.3) Methodological details

Emissions from Capital Goods are determined using US EPA EEIO emission factors and organizational spend data of capital cash expenses for the reporting year. An EEIO Sub-Industry category and corresponding emissions factor is applied to each purchase based on spend categorization. The spend data is uploaded to Persefoni.

Scope 3 category 3: Fuel-and-energy-related activities (not included in Scope 1 or 2)

(7.5.1) Base year end

12/31/2016

(7.5.2) Base year emissions (metric tons CO2e)

72293

(7.5.3) Methodological details

Market based Scope 2 data is used to determine electricity T&D losses and upstream purchased electricity emissions. Emission factors used are based on geography, with UK facilities using the latest UK DEFRA factors, and all other locations using IEA factors. The amount of energy used is parsed out by location and facility. Emissions for natural gas delivery by region and mobile fuel delivery by fuel type are estimated using scope 1 activity data and the latest UK DEFRA factors. Electricity T&D Losses Average Data Consumption, Purchased Electricity Average Data Consumption, Purchased Mobile Fuels by Type, and Purchased Stationary Fuels by Type are uploaded to Persefoni using 4 separate templates.

Scope 3 category 4: Upstream transportation and distribution

(7.5.1) Base year end

12/31/2016

(7.5.2) Base year emissions (metric tons CO2e)

480952

(7.5.3) Methodological details

Emissions are determined using spend data and the latest US EPA EEIO emission factors. Xerox's reported Category 4 data includes emissions from all transportation-related suppliers. Emissions from some Xerox external logistics providers are calculated directly by the provider based on Xerox shipment data and communicated to Xerox directly. This data is directly added to Persefoni as an external calculation.

Scope 3 category 5: Waste generated in operations

(7.5.1) Base year end

12/31/2016

(7.5.2) Base year emissions (metric tons CO2e)

1839

(7.5.3) Methodological details

Primary data regarding the total amount of each waste type produced and disposal method are sourced from site disposal records stored on Xerox's internal hub system. CO2e is quantified in Persefoni by uploading the waste quantity using the Waste Type Specific method. UK DEFRA emission factors are used in this calculation. As per GHG Protocol the benefits of energy recovery/Waste to Energy and recycling/re-use are attributed to the user of the recycled materials, not the producer of the waste.

Scope 3 category 6: Business travel

(7.5.1) Base year end

12/31/2016

(7.5.2) Base year emissions (metric tons CO2e)

12740

(7.5.3) Methodological details

Starting in 2024, data is obtained from Xerox expense and travel systems, which track purchases and associated secondary attributes such as miles traveled and transportation method. Air, car mileage reimbursement, car rental, hotel stay, rail, bus, taxi, tram/subway, and ferry travel are included in business travel calculations. Air travel emissions are determined based on flight mileage records. Car mileage emissions are determined based on car mileage records. If EPA factors are used, Xerox assumes the vehicle type is a 'light duty vehicle' and if DEFRA factors are used, Xerox assumes the vehicle type is 'by size, an average car'. Car rental emissions are determined based on purchase spend records using US EPA EEIO factors. Spend for this category is assumed only to be rental booking fees and passenger car rental is the subcategory assumed for all car rental purchases. Hotel stay emissions are determined based on nights stayed records. For hotels outside of the US, UK DEFRA emission factors are used. For countries that lack emission factors for hotel stay, proxy countries were chosen based on close CO2e impact and/or region. Rail emissions are determined based on rail mileage records. If EPA factors are used, Xerox assumes the vehicle type is a 'commuter rail' and if DEFRA factors are used, Xerox assumes the vehicle type is 'light rail and train. When the route distance is not provided for trips, the distance is estimated based on the intensity of the km/ spend during the reporting year for the whole population. If the spend is not available, the total spend per trip is estimated based on the average spend per trip for the reporting year for the whole population. Bus and Ferry emissions are determined based on purchase spend records. Japan supply chain factors are used because they are only emissions factors available within Persefoni for the industry-based calculations. Passenger bus transport is the subcategory assumed for all bus travel purchases. Tram/subway emissions are determined based on purchase spend records. US EPA EEIO factors are used. Mixed mode transit systems is the subcategory assumed for all tram/subway travel. For activities within the US, EPA factors are used. For activities with an origin/destination outside of the US, UK DEFRA emission factors are used.

Scope 3 category 7: Employee commuting

(7.5.1) Base year end

12/31/2016

(7.5.2) Base year emissions (metric tons CO2e)

48445

(7.5.3) Methodological details

The following average secondary activity data were used to estimate average commuting distance per year per employee per mode of transport based on the US Bureau of Transportation Statistics Principal Means of Transportation to Work, Table 1-41. It is assumed that the average annual percent of days worked from home (47%). Primary data regarding number of Xerox employees is obtained from Xerox HR and CO2e emissions are determined using emission factors (kg/vehicle-km or kg/passenger-km) for each transport mode sourced from Table 10 of the Climate Leaders Emission Factors for Greenhouse Gas Inventories – April 2021. Average person-days worked from home for 2021 was obtained by our personnel tracking system developed to monitor COVID19 related metrics. This data is not available for previous years. We stopped monitoring employee onsite work in 2022 but many employees in Xerox continue to work hybrid or fully remote. Therefore, we continue to assume that employees work from home at the percentage stated above.

Scope 3 category 8: Upstream leased assets

(7.5.3) Methodological details

Not relevant - We take an operational control based approach to reporting and report all locations where we are present as part of our Scope 1 and 2 footprint; therefore, we do not have any upstream assets that we lease as part of our Scope 3 footprint.

Scope 3 category 9: Downstream transportation and distribution

(7.5.3) Methodological details

Not relevant - This category includes emissions from transportation of sold products and the end consumer in vehicles not paid for by Xerox and from retail and storage. Xerox doesn't have point of sale locations – we ship direct to the customer therefore these emissions are included together with upstream transportation.

Scope 3 category 10: Processing of sold products

(7.5.3) Methodological details

Not relevant – Xerox supplies finished electronic products, therefore no further processing of the product is required before consumer use.

Scope 3 category 11: Use of sold products

(7.5.1) Base year end

12/31/2016

(7.5.2) Base year emissions (metric tons CO2e)

299138

(7.5.3) Methodological details

Includes emissions from electricity use of devices by end users installed globally in the reporting year. At a minimum, entry- and mid-level product models that had over 20 installs during the reporting year are included in the assessment. Any production level models are included. In instances where individual models cannot be accounted for in aggregate to match the total number of models at each level, an average speed, active power, standby power, and sleep power are used for each tier and applied to the unaccounted models. Device print time over an estimated lifetime of 5 years is estimated using US EPA ENERGY STAR estimated print volume based on device print speed. The device is assumed to be in sleep mode for non-print time (sleep time). Print time is multiplied by active power and remaining time is multiplied by sleep power to estimate total electricity use of devices. USEPA eGRID, UK Defra, and IEA International Electricity Factors are used for all devices in all locations separated by legal entity and product. This data is uploaded to Persefoni to calculate emissions.

Scope 3 category 12: End of life treatment of sold products

(7.5.1) Base year end

12/31/2016

(7.5.2) Base year emissions (metric tons CO2e)

4775

(7.5.3) Methodological details

Primary data regarding the total US Tons of products and packaging sold are sourced from company records. CO2e emissions are determined using primary data regarding waste disposal methods for products (i.e., % recycled, landfilled and incinerated), sourced from data held by Xerox's worldwide asset recovery centers and 3rd party recyclers. Emission factors (kg CO2e per kg waste) specific to each waste type and disposal method sourced from the UK DEFRA emission factor set. As per GHG Protocol, the benefits of energy recovery/waste to energy and recycling/re-use are attributed to the user of the recycled materials, not the producer of the waste. Data is uploaded to Persefoni to calculate emissions.

Scope 3 category 13: Downstream leased assets

(7.5.3) Methodological details

Not relevant - Xerox does not lease a significant amount of owned assets to 3rd parties. In accordance with the GHG Scope 3 Protocol, products/equipment sold under bundled lease arrangement (whereby customers pay for equipment over time rather than at the date of installation) would be reported under Scope 3 category 11 'use of sold products'.

Scope 3 category 14: Franchises

(7.5.3) Methodological details

Not relevant – Xerox is not a franchisor and does not operate any franchises.

Scope 3 category 15: Investments

(7.5.3) Methodological details

*Not relevant – This does not apply to Xerox business
[Fixed row]*

(7.6) What were your organization's gross global Scope 1 emissions in metric tons CO2e?

Reporting year

(7.6.1) Gross global Scope 1 emissions (metric tons CO2e)

71495

(7.6.3) Methodological details

Using the Persefoni carbon accounting software, utility data is uploaded using either the fuel-based method if natural gas consumption is known for a facility or the floor-based method if consumption is not known for a facility. Persefoni uses CBECS estimates for the location-based method. US EPA emission factors are used for natural gas consumption. Emissions from Xerox's mobile fleet are taken from fuel and distance-based data and are calculated within Persefoni using EPA factors for US locations and DEFRA factors for outside the US. Xerox uses Carbon Dioxide to clean parts as an alternative to solvent cleaning at the Webster facility. The amount of Carbon Dioxide used is directly obtained from purchase records and uploaded to Persefoni. Fugitive emissions estimations are uploaded into Persefoni and multiplied by each gas's Global Warming Potential. Due to difficulties in data collection and the small size of the emissions, emissions from fire extinguishers and fire suppressants are excluded.

Past year 1

Reporting year

(7.7.1) Gross global Scope 2, location-based emissions (metric tons CO2e)

46715

(7.7.2) Gross global Scope 2, market-based emissions (metric tons CO2e) (if applicable)

38936

(7.7.4) Methodological details

Xerox's indirect location-based emissions are determined using the methodology presented in the Climate Leaders guidance documents and the GHG Protocol. Once the amount of purchased electricity or steam is totaled (kWh), it is uploaded into Persefoni, where emissions are determined using the latest available sub-regional emission factors from the EPA's Emissions & Generation Resource Integrated Database (eGRID). In cases where utility data is unavailable, electricity use is estimated based on building specifics, location, and floor area. Persefoni uses CBECS to estimate electricity. Emissions generated from purchased electricity in countries other than the United States are determined (in Persefoni) using the latest country specific emission factors available from the IEA or UK Defra. The reported and quantified energy consumption from location-based data uploads are utilized as the energy consumption for market-based emissions. US EPA eGRID sub region emission factors were used in the US, AIB country specific residual factors for EMEA countries included in AIB, and IEA emission factors are used for other countries. Scope 2 'market-based' emissions have been determined using the following 'contractual instruments' for Xerox's purchased electricity: Contracts with electricity suppliers to supply renewable electricity to Xerox Sites sites with accompanying evidence, Regional and National consumption (Residual Mix) emission factors for European countries, Regional and National consumption (Residual Mix) emission factors for European countries.

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

33

(7.8.5) Please explain

To quantify emissions for Purchased Goods and Services, Xerox obtains supplier spend data from Xerox Global Spend Management, maps Xerox spend sub-categories to EEIO industry categories or tag for exclusion, inputs spend data, supplier name, and EEIO categories to Persefoni, remove spend for specific suppliers where emissions data have been provided or more detailed quantification method is utilized to improve accuracy, and upload emissions data to replace adjusted spend. Excluded spend from this list include amounts from suppliers that Xerox pays only for financial pass-through (payroll, commission, etc) or government payments. Additionally, suppliers that provided transportation services are included in Category 4 instead of Category 1. Spend on Capital Goods is adjusted rather than excluded. Adjustments to supplier spend are made to avoid double counting emissions. The intent of adjustments is to improve the data quality used in the GHG inventory. Current adjustments include capital goods, spend on equipment procured from OEM suppliers, and business travel spend data related to corporate card programs.

10

(7.8.5) Please explain

Starting in 2024, data is obtained from Xerox expense and travel systems, which track purchases and associated secondary attributes such as miles traveled and transportation method. Air, car mileage reimbursement, car rental, hotel stay, rail, bus, taxi, tram/subway, and ferry travel are included in business travel calculations. Air travel emissions are determined based on flight mileage records. Car mileage emissions are determined based on car mileage records. If EPA factors are used, Xerox assumes the vehicle type is a 'light duty vehicle' and if DEFRA factors are used, Xerox assumes the vehicle type is 'by size, an average car'. Car rental emissions are determined based on purchase spend records using US EPA EEIO factors. Spend for this category is assumed only to be rental booking fees and passenger car rental is the subcategory assumed for all car rental purchases. Hotel stay emissions are determined based on nights stayed records. For hotels outside of the US, UK DEFRA emission factors are used. For countries that lack emission factors for hotel stay, proxy countries were chosen based on close CO2e impact and/or region. Rail emissions are determined based on rail mileage records. If EPA factors are used, Xerox assumes the vehicle type is a 'commuter rail' and if DEFRA factors are used, Xerox assumes the vehicle type is 'light rail and train. When the route distance is not provided for trips, the distance is estimated based on the intensity of the km/ spend during the reporting year for the whole population. If the spend is not available, the total spend per trip is estimated based on the average spend per trip for the reporting year for the whole population. Bus and Ferry emissions are determined based on purchase spend records. Japan supply chain factors are used because they are only emissions factors available within Persefoni for the industry-based calculations. Passenger bus transport is the subcategory assumed for all bus travel purchases. Tram/subway emissions are determined based on purchase spend records. US EPA EEIO factors are used. Mixed mode transit systems is the subcategory assumed for all tram/subway travel.

(7.10.1) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

Change in renewable energy consumption

(7.10.1.1) Change in emissions (metric tons CO2e)

2559

(7.10.1.2) Direction of change in emissions

Select from:

Decreased

(7.10.1.3) Emissions value (percentage)

2

(7.10.1.4) Please explain calculation

Total Scope 1 and Scope 2 (market) emissions reduced by 2,559 tCO2e due the purchase of additional renewable electricity in 2023 compared to 2022. Purchased increased (35,000) quantity of unbundled RECs for the North American region. Renewable electricity supply contract signed for print production facilities in the UK starting in Q4 2023. Our total Scope 1 and Scope 2 (market) emissions reported for 2022 were 130,977 tCO2e, therefore we arrived at 2% through $-2,559/130,977 = 2\%$ (i.e. a 2% decrease).

Other emissions reduction activities

(7.10.1.1) Change in emissions (metric tons CO2e)

1704

(7.10.1.2) Direction of change in emissions

Decreased

(7.10.1.3) Emissions value (percentage)

1.3

(7.10.1.4) Please explain calculation

Emissions reduction activities attributed to facility improvements that have been tracked. Total Scope 1 and Scope 2 (market) emissions reduced by 1,704 tCO₂e due to emissions reduction activities attributed to facility improvements that have been tracked. Our total Scope 1 and Scope 2 (market) emissions reported for 2022 were 130,977 tCO₂e, therefore we arrived at 1.3% through $-1,704/130,977 - 1\%$ (i.e. a 1% decrease).

Change in output

(7.10.1.1) Change in emissions (metric tons CO₂e)

16283

(7.10.1.2) Direction of change in emissions

Select from:

Decreased

(7.10.1.3) Emissions value (percentage)

12.4

(7.10.1.4) Please explain calculation

Total Scope 1 and Scope 2 (market) emissions reduced by 16,283 tCO₂e due to a change in output. Reduction in revenue translates to a decrease in emissions due to decline in output. Global optimizations resulted in reduction in facility footprint and reduction in mobile fleet activity, resulting in decrease of emissions. Our total Scope 1 and Scope 2 (market) emissions reported for 2022 were 130,977 tCO₂e, therefore we arrived at 12.4% through $-16,283/130,977 - 12.4\%$ (i.e. a 12.4% decrease)

[Fixed row]

(7.15.1) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used global warming potential (GWP).

[Fixed row]*

(7.27) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

Row 1

(7.27.1) Allocation challenges

Select from:

- Diversity of product lines makes accurately accounting for each product/product line cost ineffective

(7.27.2) Please explain what would help you overcome these challenges

The varied nature of our goods and services make it difficult to allocate emissions to a particular product, service or customer. Our products and services originate from facilities which produce multiple products and services for multiple clients, making it difficult to allocate a share of the emissions from each facility or activity to a particular customer. Xerox also sells some third-party manufactured supplies through its distribution network. We currently allocate emissions for the entire company based on information available regarding each customer's annual spend with Xerox, however this is not attributable to specific products or service categories relevant to each customer. Obtaining accurate annual spend / revenue data can also be difficult. For example, depending on the customer, not all sales may be directly with Xerox but via a third party distributor. In addition, only customer accounts with revenue higher than 2.5 million (non-domestically) are tracked at a global level. Sales for customers with revenue

[Add row]

(7.28) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

(7.28.1) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

- Yes

(7.28.2) Describe how you plan to develop your capabilities

Xerox integrates lifecycle thinking into all of our product and service development activities, as well as our innovation activities. Full Life Cycle Assessments (LCA) – in accordance with ISO14040 series standards – are conducted for products where a significant technology difference indicates their utility. In 2013, Xerox expanded our Life Cycle Assessment program by utilizing Environmental Product Declarations (EPDs). Verified and published through UL Environment, LCAs are being performed on a growing number of office products using a standardized methodology. By publishing this information, Xerox is empowering our customers to learn more about how their printing behavior affects the overall carbon footprint of their organization.

Select from:

Underway

(7.53.1.82) Explain target coverage and identify any exclusions

Having achieved the GHG target that we set in 2017 (Abs 3) five years early, in 2019 we set a new science-based target which is both more ambitious and reflective of the current organization. Our newly established target uses the same base year (2016) as we had previously used but increases the target to a 60% reduction of scope 1 and scope 2 market-based emissions by 2030 from a 2016 baseline. The methodology used to set our science-based target was the Absolute Emissions Contraction approach, a scientifically-informed method for companies to set GHG reduction targets necessary to limit global temperatures to a 1.5C rise above preindustrial levels based on the SR15 special report issued by the IPCC in 2018. The IPCC SR15 estimates an overall carbon budget of 420 GtCO2 for a 66% probability to limit warming to 1.5C, and carbon budget of 580 GtCO2 for a 50% probability of limiting warming to the same temperature. We recently resubmitted our commitment to the Science Based Target initiative (SBTi) for the following reasons: • Xerox was listed under the “Software and services” sector for our original commitment. Under our current structure, we should be listed under the “Technology Hardware and Equipment” sector. • Xerox has separated from Conduent (previously known as Xerox Services). • The original commitment we submitted for year 2025 has already been achieved. We have a new, more aggressive commitment for 2030. SBTi has accepted our new commitment and has validated it. • The 2021 scope 1 and 2 emissions were estimated using an updated methodology which required Xerox to re-baseline its 2016 emissions

(7.53.1.83) Target objective

Underway

(7.53.1.82) Explain target coverage and identify any exclusions

In addition to setting new science-based targets for scope 1 and scope 2 emissions, we set an additional emissions reduction target for its scope 3 emissions. Using the Absolute Emissions Contraction approach specified in the SBTi criteria, our goal is to reduce our scope 3 emissions by 35% by 2030 from a 2016 baseline in line with keeping global temperature well-below 2C as defined by the SBTi GHG reduction scenarios. From Xerox's preliminary scope 3 screening, this target includes emissions from both upstream, operations, and downstream emission sources. Our target includes emissions from purchased goods and services (C1), Capital goods (C2), Fuel and Energy Related Activities (C3), upstream transportation and distribution (C4), waste generated in operations (C5), Business Travel (C6), employee commuting (C7), use of sold products (C11), and End of life treatment of sold products (C12) per the GHG Protocol corporate value chain emissions categories. Combined, these categories constitute Xerox's scope 3 emissions.

(7.53.1.83) Target objective

Emission reduction

(7.53.1.84) Plan for achieving target, and progress made to the end of the reporting year

Energy efficiency and reduction projects, renewable electricity sourcing.

(7.53.1.85) Target derived using a sectoral decarbonization approach

(7.54.2.15) Is this target part of an emissions target?

Abs1, Abs 2 and NZ1

(7.54.2.16) Is this target part of an overarching initiative?

Select all that apply

No, it's not part of an overarching initiative

(7.54.2.18) Please explain target coverage and identify any exclusions

In 2017 following the separation of the business into two independent, publicly-traded companies (on December 31, 2016) we set a new energy reduction target, which is both more ambitious and reflective of the current organization. We are now working on our new corporate-wide target to reduce energy consumption by 25% by 2025 (from a 2016 baseline). Xerox is treating this goal as still underway until effects from post-COVID bounce-back are assessed. In 2022, an updated methodology was used to estimate energy associated with scopes 1 and 2 emissions. This caused a re-baseline for 2016 information.

(7.54.2.19) Target objective

GHG emissions reduction

(7.54.2.20) Plan for achieving target, and progress made to the end of the reporting year

Xerox plans to reduce energy consumption by continuously evaluating and implementing energy efficiency projects, portfolio consolidation, and leverage innovations such as CareAR to mitigate vehicle travel for technical service.

(7.54.3.10) Explain target coverage and identify any exclusions

New Net Zero goal by 2040 covering emissions from Scopes 1, 2, & 3. This target is more ambitious than the current scientific consensus to reduce emissions to Net Zero by 2050. Our focus is to reduce emissions in operations and supply chain, then compensate for residual emissions using high quality market mechanisms such as credits for carbon neutralization.

(7.54.3.11) Target objective

GHG emissions reduction

(7.54.3.12) Do you intend to neutralize any residual emissions with permanent carbon removals at the end of the target?

Select from:

Yes

(7.54.3.13) Do you plan to mitigate emissions beyond your value chain?

Select from:

No, we do not plan to mitigate emissions beyond our value chain

(7.54.3.14) Do you intend to purchase and cancel carbon credits for neutralization and/or beyond value chain mitigation?

Select all that apply

No, we do not plan to purchase and cancel carbon credits for neutralization and/or beyond value chain mitigation

(7.54.3.17) Target status in reporting year

(7.55.3) What methods do you use to drive investment in emissions reduction activities?

Row 1

(7.55.3.1) Method

Select from:

Financial optimization calculations

(7.55.3.2) Comment

Several financial avenues are used to drive investment in emission reduction activities:• Energy savings, which will result in emissions reductions, based on favorable project payback due to cost savings resulting from saving energy.• Rebates from state and federal sources, utility companies, etc. We look to capitalize on all available programs to assist funding these projects.

Row 3

(7.55.3.1) Method

Select from:

Other :Goal setting and alignment

(7.55.3.2) Comment

Corporate goals are set which drive emissions reductions. For example, the implemented emission reduction projects and initiatives helped achieve our goal of 25% reduction in GHG emissions by 2025 based on a 2016 baseline. Having achieved the GHG target that we set in 2017 five years early, in 2019 we set an even more ambitious science-based target of reducing GHG emissions by 60% by 2030 from our 2016 baseline.

(7.73.4.1) Name of good/ service

VersaLink & AltaLink Devices

(7.73.4.2) Initiative ID

Select from:

Initiative 4

(7.73.4.3) Description of initiative

Every Xerox device is designed to be more energy efficient and environmentally preferable compared to the previous iteration of the design. This is to facilitate continual improvement and enable sustainability benefits for our customers. To reduce energy consumption and use phase GHG emissions, the AltaLink and VersaLink devices were specifically designed with software and hardware improvements. Software improvements allow for these devices to enter and exit sleep

modes quicker and more efficiently without any downtime. Hardware improvements include changing the architecture of the controller boards so that certain functions and ports are disabled during sleep modes. These improvements, along with others, contribute to the reduced energy use and carbon footprint of these devices.

All eligible Xerox Products

(7.73.4.2) Initiative ID

Select from:

Initiative 2

(7.73.4.3) Description of initiative

Our goal is for all eligible products to achieve Energy Star, Blue Angel, and EPEAT ecolabels, which continue to evolve, resulting in continuous reduction of emissions. Over the years, we have continuously improved our products to advance from EPEAT Bronze, to Silver and Gold. Today, we strive for earning EPEAT GOLD for all products at registration. As part of achieving EPEAT GOLD, LCAs are conducted and sustainability is characterized and shared for use by our customers to quantify the environmental benefits of Xerox equipment. Furthermore, in 2018 Xerox was the first company to reduce our environmental impact globally, registering our products to meet EPEAT for Imaging Equipment (1680.2) in Belgium, UK, France, Germany, Netherlands, Luxemburg, Switzerland, Normandy, Finland, Denmark and Sweden.

Row 5

(7.73.4.1) Name of good/ service

All Xerox Products

(7.73.4.2) Initiative ID

Initiative 1

(7.73.4.3) Description of initiative

Xerox has long incorporated environmental considerations into product design and developed a comprehensive Design for Sustainability approach based on global standards, market trends, and quantitative analysis. Our Design for Sustainability assessment is integrated into the product development process, beginning with a sustainability evaluation at the concept initiation phase. Evaluations continue throughout the development phases and include materials, parts selected, products in use, and end of life considerations. Identifying sustainability goals early in the product development cycle ensures products are designed to meet customer and market sustainability expectations when brought to market. As such, all Xerox product design happens with CO2e emissions in mind, with an emphasis on reduction.

(7.74.1.11) Estimated avoided emissions (metric tons CO2e per functional unit) compared to reference product/service or baseline scenario

16

(7.74.1.12) Explain your calculation of avoided emissions, including any assumptions

The EPA has estimated ENERGY STAR imaging equipment (copiers, printers, scanners, all-in-one devices) meeting the latest requirements will use up to 35% less electricity compared to standard models (source Imaging Equipment ENERGY STAR) saving customers money and reducing their Scope 2 carbon footprint. For example, in the Energy Star rated Xerox Altalink 8155MFD the combination of low melt Low Gloss Black toner and improved electronics result in typical energy consumption of approx. 40kWh per year, approximately a 50% lower use phase compared to a previous model. Assuming an average electricity emission factor for the US this represents savings of approximately 16kg CO2e per year from using each newer model compared to the previous model. IPCC SAR100 year Global Warming Potentials have been used in the CO2e calculations and the average electricity emission factor for the US is sourced from eGRID 2020 GHG Annual Total Output Emission Rates U.S. annual non-baseload CO2e output emission rate. In 2022, approximately 18% of revenue is from sales of equipment with at least one Type 1 ecolabel, such as an Energy Star rating.

(7.74.1.4) Description of product(s) or service(s)

For office products, Xerox uses the Electronic Products Environmental Assessment Tool (EPEAT) as the foundation of our Design for Environment program. A comprehensive environmental rating system, EPEAT identifies electronic equipment that meets specific criteria. It combines comprehensive criteria for design, production, energy use and recycling with ongoing independent verification of manufacturer claims.

(7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

No

(7.74.1.13) Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

19

C9. Environmental performance - Water security

(9.1) Are there any exclusions from your disclosure of water-related data?

Select from:

Yes

(9.1.1) Provide details on these exclusions.

Row 1

(9.1.1.1) Exclusion

Select from:

Facilities

(9.1.1.2) Description of exclusion

Xerox has numerous sales, marketing, administrative/back office, and logistics office spaces that are leased spaces. These are referred to as “service facilities” throughout this document and are excluded from reporting in this disclosure.

(9.1.1.3) Reason for exclusion

Select from:

Shared premises

(9.1.1.7) Percentage of water volume the exclusion represents

Select from:

11-20%

(9.1.1.8) Please explain

Many of our sales, marketing, administrative/back office and logistics facilities are multi-tenanted where we do not directly pay the water utility bill. Water use is either included in the lease or is not reported by remote sites where water use is minimal due to the nature of the work at these sites. Therefore, actual data for these facilities is not available. However, we do not consider this exclusion to represent a significant proportion of our total water withdrawals. Initial calculations for these locations (based on available industry average water consumption per employee data, available industry average water consumption per square foot office space, and also sense checked against water billing data obtained for a proportion of services facilities), have identified that while these service facilities comprise over 80% of current Xerox-occupied facilities by number of facilities, service-related water withdrawals represent

[Add row]

(9.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?

Water withdrawals – total volumes

(9.2.1) % of sites/facilities/operations

100%

(9.2.2) Frequency of measurement

Monthly

(9.2.3) Method of measurement

To track and report progress against our water target, we monitor water withdrawal volumes directly on a monthly basis across Xerox's core manufacturing, distribution and R&D facilities of our Technology business via incoming onsite water meters or indirectly via utility invoices.

(9.2.4) Please explain

Percentages of facilities are calculated based only on the # of facilities in scope, not including any facilities that we specifically noted as exclusions. This is an improvement to our calculation process, as in prior years we calculated the percentage based on all Xerox facilities, including those already noted as exclusions. This revised method more accurately shows performance of our facilities that are in scope. Our Technology facilities account for greater than 80% of our total water withdrawals due to the different activities undertaken at Technology sites as compared to service facilities. Therefore, we focus monitoring efforts on all Technology sites.

Water withdrawals – volumes by source

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

Water withdrawals by source is monitored and known for all Technology sites. All water used for operational processes and personal use is sourced from local municipal suppliers who withdraw water directly from lakes, rivers and other surface/ground waters. Volumes of water withdrawn is directly monitored on a monthly basis using onsite water meters or indirectly using utility invoices.

(9.2.4) Please explain

Percentages of facilities are calculated based only on the # of facilities in scope, not including any facilities that we specifically noted as exclusions. This is an improvement to our calculation process, as in prior years we calculated the percentage based on all Xerox facilities, including those already noted as exclusions. This revised method more accurately shows performance of our facilities that are in scope.

Water withdrawals quality

(9.2.1) % of sites/facilities/operations

Select from:

Not monitored

(9.2.4) Please explain

All water withdrawals come from municipal water sources and are high quality potable water as received and incoming water quality is not monitored. However, for some Xerox manufacturing processes, municipal water is further treated via reverse osmosis and/or distillation. The quality of the treated water is closely monitored to ensure acceptable quality parameters for the impacted manufacturing processes.

Water discharges – total volumes

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

As part of our goal to preserve clean water, the volume of discharges at our Technology business facilities is monitored to validate compliance with local sewer discharge permit conditions. Volumes of water discharge are monitored directly monthly using onsite water meters. (Note: Greater than 90% of overall discharge by volume is monitored via outgoing meters. Five smaller sites do not have discharge meters and estimate discharge based on the incoming water meters plus process knowledge.)

(9.2.4) Please explain

Percentages of facilities are calculated based only on the # of facilities in scope, not including any facilities that we specifically noted as exclusions. This is an improvement to our calculation process, as in prior years we calculated the percentage based on all Xerox facilities, including those already noted as exclusions. This revised method more accurately shows performance of our facilities that are in scope.

Water discharges – volumes by destination

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

The destination of water discharges is monitored for all Technology facilities. Wastewater is discharged to the local municipal sewer from all Technology facilities. Discharge volumes are monitored directly using onsite meters on a monthly basis.

(9.2.4) Please explain

Percentages of facilities are calculated based only on the # of facilities in scope, not including any facilities that we specifically noted as exclusions. This is an improvement to our calculation process, as in prior years we calculated the percentage based on all Xerox facilities, including those already noted as exclusions. This revised method more accurately shows performance of our facilities that are in scope.

Water discharges – volumes by treatment method

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Continuously

(9.2.3) Method of measurement

Six of our Technology sites perform pretreatment of select wastewaters and continuously monitor treated water to ensure discharge characteristics meet regulatory requirements. Outflow from onsite treatment systems is typically not metered but can be calculated based on flow rate and time. All other facilities are permitted to discharge directly to the municipal sewer for treatment via publicly owned treatment works (POTWs) discharge volumes are monitored monthly directly using onsite meters.

(9.2.4) Please explain

Percentages of facilities are calculated based only on the # of facilities in scope, not including any facilities that we specifically noted as exclusions. This is an improvement to our calculation process, as in prior years we calculated the percentage based on all Xerox facilities, including those already noted as exclusions. This revised method more accurately shows performance of our facilities that are in scope.

Water discharge quality – by standard effluent parameters

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Continuously

(9.2.3) Method of measurement

Facilities that perform treatment or pretreatment of wastewater continuously monitor effluent characteristics to ensure they meet permit requirements prior to discharging the treated wastewater to the municipal sanitary sewer. All sites also contract outside laboratories to perform sampling and testing at intervals as required by local regulations; standard and specialized effluent parameters are analyzed by Xerox environmental personnel to confirm compliance with regional permit requirements.

(9.2.4) Please explain

Percentages of facilities are calculated based only on the # of facilities in scope, not including any facilities that we specifically noted as exclusions.

Water discharge quality – emissions to water (nitrates, phosphates, pesticides, and/or other priority substances)

(9.2.1) % of sites/facilities/operations

Select from:

Not relevant

(9.2.4) Please explain

Xerox operations comply with regulatory requirements associated with their operations and the local water quality issues. For example, Webster, NY is required to monitor for phosphorus on a quarterly basis, however, this is considered to be part of standard effluent parameter compliance monitoring.

Water discharge quality – temperature

(9.2.1) % of sites/facilities/operations

Select from:

1-25

(9.2.2) Frequency of measurement

Select from:

Continuously

(9.2.3) Method of measurement

Water discharges are at or near ambient temperature and Xerox is not required to monitor discharge at most facilities. Water discharge temperature is directly monitored on a continuous basis via temperature probes at two Technology business facilities that require it.

(9.2.4) Please explain

Percentages of facilities are calculated based only on the # of facilities in scope, not including any facilities that we specifically noted as exclusions. This is an improvement to our calculation process, as in prior years we calculated the percentage based on all Xerox facilities, including those already noted as exclusions. This revised method more accurately shows performance of our facilities that are in scope.

Water consumption – total volume

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Yearly

(9.2.3) Method of measurement

Consumption is calculated annually as water withdrawal minus water discharge volumes for all Technology facilities.

(9.2.4) Please explain

Consumption is calculated annually as water withdrawal minus water discharge volumes for all Technology facilities.

Water recycled/reused

(9.2.1) % of sites/facilities/operations

Select from:

Not monitored

(9.2.4) Please explain

Water is reused in closed loop cooling systems in our extruded toner manufacturing processes, but quantity of water recirculated and quantity of makeup water are not monitored or tracked. In one facility, reverse osmosis reject water is reused as cooling tower makeup water, but again the quantity of water recycled/reused is not monitored or tracked.

The provision of fully-functioning, safely managed WASH services to all workers

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Continuously

(9.2.3) Method of measurement

Our Code of Business Conduct supports the principles of The United Nations Universal Declaration of Human Rights (which acknowledges that clean drinking water and sanitation are essential to the realization of all human rights). The Xerox Environment, Health, Safety, and Sustainability (EHS&S) organization ensures that those principles are followed and ensures company-wide adherence to Xerox's environment, health, safety, and sustainability policy.

(9.2.4) Please explain

The governance model we use to accomplish this includes clearly defined goals, a single set of worldwide standards, and a program of RBA surveillance audits that ensure conformance to these requirements. Suppliers complete an annual self-assessment questionnaire and suppliers scored as "high risk" receive an annual onsite audit. Audits include an on-site visit aimed at evaluating the site for basic life safety including potable water for human consumption and hygiene and environmental aspects, including sanitary water discharges.

[Fixed row]

(9.2.2) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, how do they compare to the previous reporting year, and how are they forecasted to change?

Total withdrawals

(9.2.2.1) Volume (megaliters/year)

1059.19

(9.2.2.2) Comparison with previous reporting year

Select from:

Much lower

(9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

Investment in water-smart technology/process

(9.2.2.4) Five-year forecast

Select from:

Much lower

(9.2.2.5) Primary reason for forecast

Select from:

Increase/decrease in efficiency

(9.2.2.6) Please explain

In alignment with CDP technical guidance on water accounting, water withdrawals includes municipal domestic water use at our "Technology" facilities as well as groundwater that was pumped up for remediation treatment on site, as well as estimates of groundwater infiltration into sanitary sewer pipes at the Webster, NY facility. Total withdrawals in 2023 has decreased about 22% from the prior year, which we consider to be much lower than the prior year. We use a threshold of 10% variation to consider a change "higher" or "lower" and a change of 20% to consider a change "much higher" or "much lower". In 2023 water volume withdrawal decreased due to divestment of PARC and XRCC facilities, in addition to elimination of the once-through cooling tower water at building 208 on the Webster Campus. Going forwards total water withdrawals are expected continue to decline (from 2019 levels) in the future due to a combination of efficiency improvements (such as engineering activities currently underway to evaluate potential toner wash water reduction for forward products), and reduction and eventual elimination of discharge of remediation waters and stormwater ingress waters.

Total discharges

(9.2.2.1) Volume (megaliters/year)

1197.44

(9.2.2.2) Comparison with previous reporting year

Select from:

About the same

(9.2.2.3) Primary reason for comparison with previous reporting year

Increase/decrease in business activity

(9.2.2.4) Five-year forecast

Lower

(9.2.2.5) Primary reason for forecast

Increase/decrease in efficiency

(9.2.2.6) Please explain

YOY water discharge has increased about 2% from the prior year, which we consider to be about the same. We use a threshold of 10% variation to consider a change "higher" or "lower" and a change of 20% to consider a change "much higher" or "much lower". In 2023 water levels discharged remained about the same although water volume withdrawal decreased due to divestment of PARC and XRCC facilities, in addition to elimination of the once-through cooling tower water at building 208 on the Webster Campus, discharges of treated groundwater from remediation operations increased. Going forwards total water discharges are expected continue to decline (from 2019 levels) in the future as overall water use declines due to a combination of efficiency improvements (such as engineering activities currently underway to evaluate potential toner wash water reduction for forward products), and reduction and eventual elimination of discharge of remediation waters and stormwater ingress waters.

Total consumption

(9.2.2.1) Volume (megaliters/year)

-138.25

(9.2.2.2) Comparison with previous reporting year

Select from:

Much lower

(9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

Investment in water-smart technology/process

(9.2.2.4) Five-year forecast

Select from:

Lower

(9.2.2.5) Primary reason for forecast

Increase/decrease in efficiency

(9.2.2.6) Please explain

Total water consumption decreased about 175% YOY, which we consider much lower. We use a threshold of 10% variation to consider a change "higher" or "lower" and a change of 20% to consider a change "much higher" or "much lower". The decrease in consumption is primarily driven due to the change in facilities operations and the elimination of our once-through cooling tower at building 208 on the Webster Campus. and increase in discharges of treated groundwater from remediation operations. Going forwards total water consumption is expected continue to decline (from 2019 levels) in the future as overall water use declines due to a combination of efficiency improvements (such as engineer activities currently underway to evaluate potential toner wash water reduction for forward products), and reduction and eventual elimination of discharge of remediation waters and stormwater ingressions waters. Consumption from facility maintenance activities is very low as Xerox performs virtually no landscape irrigation and has no plans to increase landscape irrigation in the future.

[Fixed row]

4.35

(9.2.4.8) Identification tool

WRI Aqueduct

WWF Water Risk Filter

(9.2.4.9) Please explain

Xerox uses several methods to identify significant water risks related to our direct operations: • All our major operating units and key corporate functions are responsible for evaluating, monitoring and managing site specific risks within their business using internal company knowledge and EHS&S expertise of the local situation, stakeholder issues, facility type and size and thus potential to impact global revenue. • Adherence to Xerox's EHS&S policy is achieved through internal surveillance audits including evaluating all our facilities for potable water for human consumption and hygiene and environmental aspects including sanitary water discharges. • In addition to these existing processes that are integrated into standard business practices, the WRI Aqueduct Water Risk Atlas Tool and WWF Water Risk Filter were used to identify facilities within our Technology operations that we consider "water stressed regions" – that is, they are located in river basins classified as water scarce, exposed to physical water scarcity or high drought conditions, or at high risk of flooding. These tools were selected as they are robust and well recognized water risk assessment tools for identify water stressed locations and locations exposed to water risk. Three Technology facilities (Oklahoma City, OK USA; Cincinnati, OH, USA; and Venray, Netherlands) have been identified to be operating in areas with water stress. As compared with the prior year, water withdrawals in water stressed areas was down 22%, primarily driven by lower production activity in our Oklahoma City, OK (USA). We use a threshold of 10% variation to consider a change "higher" or "lower" and a change of 20% to consider a change "much higher" or "much lower". However, the total withdrawals at these facilities is a very small proportion of total water used by Xerox Corporation, accounting for just 4% of technology facility water use. The number of gallons of water used by Xerox facilities in water-stressed areas was lower than in prior year (22% lower than 2022), and the overall water use by all Xerox Technology locations decreased by 22% (in part due to divestments and elimination of water intensive processes).

(9.2.8.5) Please explain

Xerox discharges all wastewater from manufacturing processes into municipal wastewater treatment facilities (also known as publicly owned treatment facilities, or POTWs). At the Webster, NY site, there is also some known groundwater infiltration into the sanitary sewer discharge pipes. As the pipes are not submetered, we cannot separately account for volumes of process water versus groundwater so reported water discharge to third parties includes this water source. 2023 discharges to the POTW are about the same as 2022 discharges. We consider YOY changes 10% to be "about the same". At the Webster, NY site, substantial progress was made in 2021 to replace sections of underground piping that is allowing groundwater infiltration, which has reduced stormwater ingress by about 30% in 2021. However, stormwater ingress is a small proportion of overall water to the sanitary sewer, so overall discharges were about the same.

(9.2.9.6) Please explain

All Xerox wastewater is discharged to local municipal treatment facilities (POTWs) under local municipal wastewater permits. However, certain manufacturing sub-operations at portions of six of our Technology facilities do perform pre-treatment of wastewater prior to discharge to the POTW along with untreated waste waters. Primary treatment of manufacturing and R&D wastewater varies depending on the characteristics of the sub-operation's waste water, but may include pH adjustments, filtration, and/or flocculation, settling and filtration to remove solid particles. None of the manufacturing or R&D wastewater pre-treatment sub-operations have meters to directly measure the quantity of water treated, though they do have flow meters which, with operational data, can be used to estimate quantity through the pre-treatment systems for a given time period. However, this data is not tracked or monitored on an on-going basis. Xerox also performs remediation of groundwaters at our Webster, NY facility. Groundwater remediation treatment consists of air stripping to remove volatile organics prior to discharge to the POTW. Volumes of treated groundwater are metered and monitored monthly. The quantity indicated for primary pre-treatment includes ONLY groundwater remediation waters.

9.89

(9.3.1.27) Total water consumption at this facility (megaliters)

0

(9.3.1.28) Comparison of total consumption with previous reporting year

Select from:

Lower

(9.3.1.29) Please explain

Water consumption at our Venray manufacturing facility is lower than 2022. We use a threshold of 10% variation to consider a change "higher" or "lower" and a change of 20% to consider a change "much higher" or "much lower". Closure and demolition of buildings with old steam boilers and chillers at our Venray manufacturing facility throughout 2020 such that by 2021 these water-using processes were gone and water use was reduced. We expect the current water use levels to be the new normal going forward.

Row 3

(9.3.1.1) Facility reference number

Select from:

Facility 2

(9.3.1.2) Facility name (optional)

Oklahoma City Manufacturing Plant

(9.3.1.3) Value chain stage

Direct operations

(9.3.1.4) Dependencies, impacts, risks, and/or opportunities identified at this facility

Risks

(9.3.1.5) Withdrawals or discharges in the reporting year

Select from:

Yes, withdrawals and discharges

(9.3.1.7) Country/Area & River basin

Canada

Mississippi River

(9.3.1.8) Latitude

35.470848

(9.3.1.9) Longitude

-97.719607

(9.3.1.10) Located in area with water stress

Yes

(9.3.1.13) Total water withdrawals at this facility (megaliters)

29.3

(9.3.1.14) Comparison of total withdrawals with previous reporting year

About the same

(9.3.1.15) Withdrawals from fresh surface water, including rainwater, water from wetlands, rivers and lakes

0

(9.3.1.16) Withdrawals from brackish surface water/seawater

0

(9.3.1.17) Withdrawals from groundwater - renewable

0

(9.3.1.18) Withdrawals from groundwater - non-renewable

0

(9.3.1.19) Withdrawals from produced/entrained water

0

(9.3.1.20) Withdrawals from third party sources

(9.3.1.22) Comparison of total discharges with previous reporting year

Higher

(9.3.1.23) Discharges to fresh surface water

0

(9.3.1.24) Discharges to brackish surface water/seawater

0

(9.3.1.25) Discharges to groundwater

0

(9.3.1.26) Discharges to third party destinations

14.68

(9.3.1.27) Total water consumption at this facility (megaliters)

14.62

(9.3.1.28) Comparison of total consumption with previous reporting year

Select from:

Lower

(9.3.1.29) Please explain

Water consumption at our Oklahoma City manufacturing facility decreased 14% from 2022 which we consider lower. We use a threshold of 10% variation to consider a change "higher" or "lower" and a change of 20% to consider a change "much higher" or "much lower".

[Add row]

(9.3.2) For the facilities in your direct operations referenced in 9.3.1, what proportion of water accounting data has been third party verified?

Water withdrawals – total volumes

(9.3.2.1) % verified

Select from:

76-100

(9.3.2.2) Verification standard used

Starting in reporting year 2021 annual total water withdrawal and discharge volumes are verified by a third party.

Water withdrawals – volume by source

(9.3.2.1) % verified

Select from:

Not verified

(9.3.2.3) Please explain

Water volumes are tracked by the individual facilities using data sources and methods that they have available locally. These numbers are reported to our corporate Environment, Health, Safety and Sustainability team, who compile the data for the corporation. Starting in reporting year 2021 annual total water withdrawal and discharge volumes are verified by a third party.

Water withdrawals – quality by standard water quality parameters

(9.3.2.1) % verified

Select from:

Not relevant

(9.3.2.3) Please explain

We do not do testing on incoming water quality by standard water quality parameters therefore this is not relevant.

Water discharges – total volumes

(9.3.2.1) % verified

Select from:

76-100

(9.3.2.2) Verification standard used

Starting in reporting year 2021 annual total water withdrawal and discharge volumes are verified by a third party.

Water discharges – volume by destination

(9.3.2.1) % verified

Select from:

Not verified

(9.3.2.3) Please explain

Water volumes are tracked by the individual facilities using data sources and methods that they have available locally. These numbers are reported to our corporate Environment, Health, Safety and Sustainability team, who compile the data for the corporation. Starting in reporting year 2021 annual total water withdrawal and discharge volumes are verified by a third party.

Water discharges – volume by final treatment level

(9.3.2.1) % verified

Not verified

(9.3.2.3) Please explain

Water volumes are tracked by the individual facilities using data sources and methods that they have available locally. These numbers are reported to our corporate Environment, Health, Safety and Sustainability team, who compile the data for the corporation. Starting in reporting year 2021 annual total water withdrawal and discharge volumes are verified by a third party.

Water discharges – quality by standard water quality parameters

(9.3.2.1) % verified

Not relevant

(9.3.2.3) Please explain

Xerox tests to ensure that they meet all required water quality parameters for all impacted wastewater streams prior to discharge. However, because all Xerox wastewater is discharged to municipal treatment facilities, we do not report water discharges broken down by water quality parameters.

Water consumption – total volume

(9.3.2.1) % verified

Select from:

Not verified

(9.3.2.3) Please explain

Water volumes are tracked by the individual facilities using data sources and methods that they have available locally. These numbers are reported to our corporate Environment, Health, Safety and Sustainability team, who compile the data for the corporation. Starting in reporting year 2021 annual total water withdrawal and discharge volumes are verified by a third party.

[Fixed row]

(9.4) Could any of your facilities reported in 9.3.1 have an impact on a requesting CDP supply chain member?

No, CDP supply chain members do not buy goods or services from facilities listed in 9.3.1

(9.5) Provide a figure for your organization's total water withdrawal efficiency.

(9.5.1) Revenue (currency)

6886000000

(9.5.2) Total water withdrawal efficiency

6501194.31

(9.5.3) Anticipated forward trend

Xerox has set a target to reduce water use by 20% by 2030 from a 2020 baseline, so we expect overall water withdrawal to decrease over time. We expect to achieve this goal even as climate change increases relative losses due to evaporation. At the same time, we are always striving to grow revenue and have plans in place to achieve our financial targets. Thus, we highly expect our water withdrawal efficiency to improve over time.

[Fixed row]

(9.13) Do any of your products contain substances classified as hazardous by a regulatory authority?

	Products contain hazardous substances
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(9.13.1) What percentage of your company's revenue is associated with products containing substances classified as hazardous by a regulatory authority?

Row 1

(9.13.1.1) Regulatory classification of hazardous substances

Select from:

Other, please specify :See explanation

(9.13.1.2) % of revenue associated with products containing substances in this list

Don't know

(9.13.1.3) Please explain

Xerox Corporation is committed to ensuring that Xerox branded products and the materials used in them are compliant with applicable regulatory requirements and our internal requirements for human and environmental health. We continuously monitor global chemical regulatory developments and assess products to ensure compliance with regulatory authority requirements. The company has long worked toward minimizing the use of hazardous substances in our products. We require our suppliers follow our EHS1001 and EHS701 requirements aligned with IEC62474 governing the use of chemicals in our products, parts, and supplies found at <https://www.xerox.com/en-us/about/ehs/chemicals-inproducts>. IEC62474 is updated twice annually with IEC revisions. Since 2006, all new Xerox products meet the requirements of the EU's Directive 2002/95/EC, as revised by 2011/65/EU, on restrictions of the use of hazardous substances in electrical and electronic equipment (RoHS). Xerox also has no applications requiring an authorization for the placing on the market or the use of a substance on the Annex XIV Authorisation List. Certain chemical substances are subject to restrictions in the EU and these are listed in Annex XVII of the REACH Regulation. Xerox products comply fully with these requirements. The company continues to work closely with its supply chain to ensure that all the requirements of the REACH Regulation are fully implemented.
[Add row]

(9.14) Do you classify any of your current products and/or services as low water impact?

(9.14.1) Products and/or services classified as low water impact

Select from:

No, and we do not plan to address this within the next two years

(9.14.3) Primary reason for not classifying any of your current products and/or services as low water impact

Select from:

Judged to be unimportant, explanation provided

(9.14.4) Please explain

Xerox's products and services do not directly use or discharge water during their use therefore we do not consider developing products and services that could be considered as having a lower detrimental impact on water resources, than the market norm or than the company's previous products/services to be applicable to our business.

[Fixed row]

(9.15) Do you have any water-related targets?

Select from:

Yes

(9.15.1) Indicate whether you have targets relating to water pollution, water withdrawals, WASH, or other water-related categories.

Water pollution

(9.15.1.1) Target set in this category

Select from:

No, and we do not plan to within the next two years

(9.15.1.2) Please explain

Our goal is to proactively prevent any accidental release of regulated materials into the air, soil, and water. e utilize best practices to prevent unwanted pollutants from entering waterways through surface contamination and runoff.All manufacturing and distribution facilities also implement an environmental management system that conforms with ISO14001. This establishes a framework to ensure compliance with regulations and Xerox standards, identify environmental impact, and set individual site objective and performance targets.

Water withdrawals

(9.15.1.1) Target set in this category

Yes

Water, Sanitation, and Hygiene (WASH) services

(9.15.1.1) Target set in this category

No, and we do not plan to within the next two years

(9.15.1.2) Please explain

The Xerox Environment, Health, Safety, and Sustainability (EHS&S) organization ensures company-wide adherence to Xerox's environment, health, safety, and sustainability policy. The governance model we use to accomplish this includes clearly defined goals, a single set of worldwide standards, and a programme of surveillance audit that ensures conformance to these requirements. Audits include an on-site visit aimed at evaluating the site for basic life safety including potable water for human consumption and hygiene and environmental aspects including sanitary water discharges.

Other

(9.15.1.1) Target set in this category

Select from:

No, and we do not plan to within the next two years

(9.15.1.2) Please explain

Although Xerox has not established a reduction goal for wastewater discharges, these volumes roughly correlate with withdrawal and have decreased more than 50% since 2010.

[Fixed row]

(9.15.2) Provide details of your water-related targets and the progress made.

Row 1

(9.15.2.1) Target reference number

139

(9.15.2.12) Global environmental treaties/initiatives/ frameworks aligned with or supported by this target

Select all that apply

Sustainable Development Goal 6

(9.15.2.13) Explain target coverage and identify any exclusions

In January 2021, Xerox set a corporate target to reduce absolute water withdrawals by 20% by 2030 from 2020 baseline.

(9.15.2.14) Plan for achieving target, and progress made to the end of the reporting year

In 2023, Xerox divested two facilities and eliminated the once-through cooling tower water at building 208 on the Webster Campus, which decreased total water withdrawals in comparison to 2022. Going forwards total water withdrawals are expected continue to decline (from 2019 levels) in the future due to a combination of efficiency improvements (such as engineer activities currently underway to evaluate potential toner wash water reduction for forward products), and reduction and eventual elimination of discharge of remediation waters and stormwater ingressions waters.

(9.15.2.16) Further details of target

No further details

[Add row]

C10. Environmental performance - Plastics

(10.1) Do you have plastics-related targets, and if so what type?

	Targets in place

(13.1.1.1) Environmental issue for which data has been verified and/or assured

Select all that apply

Water

(13.1.1.2) Disclosure module and data verified and/or assured

Environmental performance – Water security

Water discharges – total volumes

Water discharges – volumes by destination

(13.1.1.3) Verification/assurance standard

General standards

- AA1000AS

(13.1.1.4) Further details of the third-party verification/assurance process

Starting in reporting 2021 annual total water withdrawal and discharge volumes are verified by a third party. Xerox has determined that it is important now to externally verify the information due to the physical risks that water availability can pose to communities from climate related impacts. Additionally, independent third-party verification reduces reputational risks associated with information disclosure of environmental metrics.

Row 2

(13.1.1.1) Environmental issue for which data has been verified and/or assured

- Climate change

(13.1.1.2) Disclosure module and data verified and/or assured

(13.1.1.4) Further details of the third-party verification/assurance process

We have completed full cradle-to-grave peer-reviewed LCAs on multiple Xerox printer and multifunctional device configurations. The peer review was undertaken in accordance with ISO 14071:2014 LCA - Critical review processes and reviewer competencies: Additional requirements and guidelines to ISO 14044:2006 Permission to use the JEMAI (Japan Environmental Management Association for Industry) Carbon Footprint of Products (CFP) declaration and logo also requires 'limited level assurance' of our product LCA data by a CFP System Certification body registered with JEMAI. Lifecycle Assessments (LCAs) are a means of technically evaluating the environmental footprint of a product's materials, manufacturing, distribution, use and end-of-life. We conduct full LCAs, in accordance with the appropriate ISO standards (ISO 14040, 14044, 14067) to determine where in the product lifecycle the largest environmental impacts arise and to compare products with a significant difference in technology. Full peer-reviewed and verified LCAs have been conducted on many of our printing devices. Many of these LCAs directly contributed to our products achieving the Electronic Products Environmental Assessment Tool (EPEAT) Gold certification for these configurations and provided valuable input to our design teams to determine future opportunities for reductions in environmental impacts.

[Fixed row]

(7.26) Allocate your emissions to your customers listed below according to the goods or services you have sold them in this reporting period.

Row 1

(7.26.1) Requesting member

Select from:

(7.26.2) Scope of emissions

Select from:

Scope 1

(7.26.4) Allocation level

Select from:

Company wide

(7.26.6) Allocation method

Select from:

- Allocation based on the market value of products purchased

(7.26.7) Unit for market value or quantity of goods/services supplied

- Currency

(7.26.9) Emissions in metric tonnes of CO₂e

18

(7.26.10) Uncertainty (±%)

10

(7.26.11) Major sources of emissions

Scope 1 emissions comprise natural gas consumed for heating in manufacturing sites, warehouses, service, sales and back office support facilities. Also emissions from company owned or controlled vehicles

(7.26.12) Allocation verified by a third party?

Select from:

- No

(7.26.13) Please explain how you have identified the GHG source, including major limitations to this process and assumptions made

Xerox calculates its reported GHG emissions in accordance with The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (Revised Edition) We take an operational control based approach to reporting our GHG inventory. The reported greenhouse gas emissions encompass fleet and all facilities for Xerox Corporation as it operated in 2023.

Row 2

(7.26.1) Requesting member

Select from:

(7.26.2) Scope of emissions

Scope 2: market-based

(7.26.4) Allocation level

Select from:

Company wide

(7.26.6) Allocation method

Select from:

Allocation based on the market value of products purchased

(7.26.7) Unit for market value or quantity of goods/services supplied

Select from:

Currency

(7.26.9) Emissions in metric tonnes of CO₂e

10

(7.26.10) Uncertainty (±%)

10

(7.26.11) Major sources of emissions

Scope 2 (market-based) emissions comprise electricity used to power production lines, equipment, lighting etc. in manufacturing sites, warehouses, service, sales and back office support facilities.

(7.26.12) Allocation verified by a third party?

Select from:

No

(7.26.13) Please explain how you have identified the GHG source, including major limitations to this process and assumptions made

Xerox calculates its reported GHG emissions in accordance with The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (Revised Edition) We take an operational control based approach to reporting our GHG inventory. The reported greenhouse gas emissions encompass fleet and all facilities for Xerox Corporation as it operated in 2023.

(7.73.3.5) Emissions at the lifecycle stage in kg CO2e per unit

25

(7.73.3.6) Lifecycle stage under your ownership or control

Select from:

Yes

(7.73.3.7) Type of data used

Select from:

Secondary

(7.73.3.8) Data quality

Good. Basic secondary data v.1.01 is preferentially used. Available secondary data (country v.1.03, foreign country v.1.01) is used if the items don't correspond to basic data v.1.01 Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process because it is difficult to collect the data for thousands of the parts. Location-based Scope 2 emissions.

(7.73.3.9) If applicable, describe the verification/assurance of the product emissions data

Permission to use the JEMAI (Japan Environmental Management Association for Industry) Carbon Footprint of Products (CFP) declaration and logo requires data verification. Upon receiving an application for CFP verification from a company wishing to make a CFP declaration, JEMAI (the program holder), selects a CFP verifier from licensed reviewers. The selected verifier conducts CFP verification for the product in the application and makes an approval/disapproval decision. Then the Review Panel confirms the result of the verification submitted by the CFP verifier, and makes a final judgment on whether to approve. CFP declarations are examined from the following basic perspectives: Conformity to relevant rules; Conformity to an applicable CFP-PCR; and Traceability of data. (7.73.3.7) Type of data used

Select from:

Secondary

(7.73.3.8) Data quality

Good. Basic secondary data v.1.01 is preferentially used. Available secondary data (country v.1.03, foreign country v.1.01) is used if the items don't correspond to basic data v.1.01 Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process because it is difficult to collect the data for thousands of the parts. Location-based Scope 2 emissions.

(7.73.3.9) If applicable, describe the verification/assurance of the product emissions data

Permission to use the JEMAI (Japan Environmental Management Association for Industry) Carbon Footprint of Products (CFP) declaration and logo requires data verification. Upon receiving an application for CFP verification from a company wishing to make a CFP declaration, JEMAI (the program holder), selects a CFP

verifier from licensed reviewers. The selected verifier conducts CFP verification for the product in the application and makes an approval/disapproval decision. Then the Review Panel confirms the result of the verification submitted by the CFP verifier, and makes a final judgment on whether to approve. CFP declarations are examined from the following basic perspectives: Conformity to relevant rules; Conformity to an applicable CFP-PCR; and Traceability of data. Product Verification ID CR-DG02-17048

(7.73.3.8) Data quality

Good. Basic secondary data v.1.01 is preferentially used. Available secondary data (country v.1.03, foreign country v.1.01) is used if the items don't correspond to basic data v.1.01 Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process because it is difficult to collect the data for thousands of the parts. Location-based Scope 2 emissions.

(7.73.3.9) If applicable, describe the verification/assurance of the product emissions data

Permission to use the JEMAI (Japan Environmental Management Association for Industry) Carbon Footprint of Products (CFP) declaration and logo requires data verification. Upon receiving an application for CFP verification from a company wishing to make a CFP declaration, JEMAI (the program holder), selects a CFP verifier from licensed reviewers. The selected verifier conducts CFP verification for the product in the application and makes an approval/disapproval decision. Then the Review Panel confirms the result of the verification submitted by the CFP verifier, and makes a final judgment on whether to approve. CFP declarations are examined from the following basic perspectives: Conformity to relevant rules; Conformity to an applicable CFP-PCR; and Traceability of data. (7.73.3.5) Emissions at the lifecycle stage in kg CO2e per unit

61.0

(7.73.3.6) Lifecycle stage under your ownership or control

No

(7.73.3.7) Type of data used

Primary and secondary

(7.73.3.8) Data quality

Good. Basic secondary data v.1.01 is preferentially used. Available secondary data (country v.1.03, foreign country v.1.01) is used if the items don't correspond to basic data v.1.01 Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process because it is difficult to collect the data for thousands of the parts. Location-based Scope 2 emissions.

(7.73.3.9) If applicable, describe the verification/assurance of the product emissions data

The study was reviewed for compliance with ISO/TC 14067 – Greenhouse Gases – Carbon footprint of products – Requirements and guidelines for quantification and communication by EarthShift Global LLC. The methods used to carry out the LCA are consistent with the International Standards ISO 14040 and 14044. • The methods used to carry out the LCA are scientifically and technically valid; • The data used are appropriate and reasonable in relation to the goal of the study; • The interpretations reflect the limitations identified and the goal of the study; and • The study report is transparent and consistent.

Permission to use the JEMAI (Japan Environmental Management Association for Industry) Carbon Footprint of Products (CFP) declaration and logo requires data verification. Upon receiving an application for CFP verification from a company wishing to make a CFP declaration, JEMAI (the program holder), selects a CFP verifier from licensed reviewers. The selected verifier conducts CFP verification for the product in the application and makes an approval/disapproval decision. Then the Review Panel confirms the result of the verification submitted by the CFP verifier, and makes a final judgment on whether to approve. CFP declarations are examined from the following basic perspectives: Conformity to relevant rules; Conformity to an applicable CFP-PCR; and Traceability of data. Product Verification ID FX-2018-002

(7.73.3.6) Lifecycle stage under your ownership or control

Select from:

No

(7.73.3.7) Type of data used

Select from:

- Primary and secondary

(7.73.3.8) Data quality

Good. Basic secondary data v.1.01 is preferentially used. Available secondary data (country v.1.03, foreign country v.1.01) is used if the items don't correspond to basic data v.1.01 Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process because it is difficult to collect the data for thousands of the parts. Location-based Scope 2 emissions.

(7.73.3.9) If applicable, describe the verification/assurance of the product emissions data

Permission to use the JEMAI (Japan Environmental Management Association for Industry) Carbon Footprint of Products (CFP) declaration and logo requires data verification. Upon receiving an application for CFP verification from a company wishing to make a CFP declaration, JEMAI (the program holder), selects a CFP verifier from licensed reviewers. The selected verifier conducts CFP verification for the product in the application and makes an approval/disapproval decision. Then the Review Panel confirms the result of the verification submitted by the CFP verifier, and makes a final judgment on whether to approve. CFP declarations are examined from the following basic perspectives: Conformity to relevant rules; Conformity to an applicable CFP-PCR; and Traceability of data. Product Verification ID FX-2018-005

The study was reviewed for compliance with ISO/TC 14067 – Greenhouse Gases – Carbon footprint of products – Requirements and guidelines for quantification and communication by EarthShift Global LLC. The methods used to carry out the LCA are consistent with the International Standards ISO 14040 and 14044. • The methods used to carry out the LCA are scientifically and technically valid; • The data used are appropriate and reasonable in relation to the goal of the study; • The interpretations reflect the limitations identified and the goal of the study; and • The study report is transparent and consistent.

(7.73.3.9) If applicable, describe the verification/assurance of the product emissions data

Permission to use the JEMAI (Japan Environmental Management Association for Industry) Carbon Footprint of Products (CFP) declaration and logo requires data verification. Upon receiving an application for CFP verification from a company wishing to make a CFP declaration, JEMAI (the program holder), selects a CFP verifier from licensed reviewers. The selected verifier conducts CFP verification for the product in the application and makes an approval/disapproval decision. Then the Review Panel confirms the result of the verification submitted by the CFP verifier, and makes a final judgment on whether to approve. CFP declarations are examined from the following basic perspectives: Conformity to relevant rules; Conformity to an applicable CFP-PCR; and Traceability of data. Product Verification ID CR-DG02-17033

(7.73.3.8) Data quality

Good. Basic secondary data v.1.01 is preferentially used. Available secondary data (country v.1.03, foreign country v.1.01) is used if the items don't correspond to basic data v.1.01 Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process because it is difficult to collect the data for thousands of the parts. Location-based Scope 2 emissions.

Good. Basic secondary data v.1.01 is preferentially used. Available secondary data (country v.1.03, foreign country v.1.01) is used if the items don't correspond to basic data v.1.01 Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process because it is difficult to collect the data for thousands of the parts. Location-based Scope 2 emissions.

(7.73.3.9) If applicable, describe the verification/assurance of the product emissions data

Permission to use the JEMAI (Japan Environmental Management Association for Industry) Carbon Footprint of Products (CFP) declaration and logo requires data verification. Upon receiving an application for CFP verification from a company wishing to make a CFP declaration, JEMAI (the program holder), selects a CFP verifier from licensed reviewers. The selected verifier conducts CFP verification for the product in the application and makes an approval/disapproval decision. Then the Review Panel confirms the result of the verification submitted by the CFP verifier, and makes a final judgment on whether to approve. CFP declarations are examined from the following basic perspectives: Conformity to relevant rules; Conformity to an applicable CFP-PCR; and Traceability of data. Product Verification ID FX-2018-005

The study was reviewed for compliance with ISO/TC 14067 – Greenhouse Gases – Carbon footprint of products – Requirements and guidelines for quantification and communication by EarthShift Global LLC. The methods used to carry out the LCA are consistent with the International Standards ISO 14040 and 14044. • The methods used to carry out the LCA are scientifically and technically valid; • The data used are appropriate and reasonable in relation to the goal of the study; • The interpretations reflect the limitations identified and the goal of the study; and • The study report is transparent and consistent.

The selected verifier conducts CFP verification for the product in the application and makes an approval/disapproval decision. Then the Review Panel confirms the result of the verification submitted by the CFP verifier, and makes a final judgment on whether to approve. CFP declarations are examined from the following basic perspectives: Conformity to relevant rules; Conformity to an applicable CFP-PCR; and Traceability of data. Product Verification ID CR-DG02-17072

(7.73.3.8) Data quality

Good. Basic secondary data v.1.01 is preferentially used. Available secondary data (country v.1.03, foreign country v.1.01) is used if the items don't correspond to basic data v.1.01 Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process because it is difficult to collect the data for thousands of the parts. Location-based Scope 2 emissions.

(7.73.3.9) If applicable, describe the verification/assurance of the product emissions data

Permission to use the JEMAI (Japan Environmental Management Association for Industry) Carbon Footprint of Products (CFP) declaration and logo requires data verification. Upon receiving an application for CFP verification from a company wishing to make a CFP declaration, JEMAI (the program holder), selects a CFP verifier from licensed reviewers. The selected verifier conducts CFP verification for the product in the application and makes an approval/disapproval decision. Then the Review Panel confirms the result of the verification submitted by the CFP verifier, and makes a final judgment on whether to approve. CFP declarations are examined from the following basic perspectives: Conformity to relevant rules; Conformity to an applicable CFP-PCR; and Traceability of data. - Secondary

(7.73.3.8) Data quality

Good. Basic secondary data v.1.01 is preferentially used. Available secondary data (country v.1.03, foreign country v.1.01) is used if the items don't correspond to basic data v.1.01 Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process because it is difficult to collect the data for thousands of the parts. Location-based Scope 2 emissions.

(7.73.3.9) If applicable, describe the verification/assurance of the product emissions data

Permission to use the JEMAI (Japan Environmental Management Association for Industry) Carbon Footprint of Products (CFP) declaration and logo requires data verification. Upon receiving an application for CFP verification from a company wishing to make a CFP declaration, JEMAI (the program holder), selects a CFP verifier from licensed reviewers. The selected verifier conducts CFP verification for the product in the application and makes an approval/disapproval decision. Then the Review Panel confirms the result of the verification submitted by the CFP verifier, and makes a final judgment on whether to approve. CFP declarations are examined from the following basic perspectives: Conformity to relevant rules; Conformity to an applicable CFP-PCR; and Traceability of data. Permission to use the JEMAI (Japan Environmental Management Association for Industry) Carbon Footprint of Products (CFP) declaration and logo requires data verification. Upon receiving an application for CFP verification from a company wishing to make a CFP declaration, JEMAI (the program holder), selects a CFP verifier from licensed reviewers. The selected verifier conducts CFP verification for the product in the application and makes an approval/disapproval decision. Then the Review Panel confirms the result of the verification submitted by the CFP verifier, and makes a final judgment on whether to approve. CFP declarations are examined from the following basic perspectives: Conformity to relevant rules; Conformity to an applicable CFP-PCR; and Traceability of data. Product Verification ID CR-DG02-17033

The study was reviewed for compliance with ISO/TC 14067 – Greenhouse Gases – Carbon footprint of products – Requirements and guidelines for quantification and communication by EarthShift Global LLC. The methods used to carry out the LCA are consistent with the International Standards ISO 14040 and 14044. • The methods used to carry out the LCA are scientifically and technically valid; • The data used are appropriate and reasonable in relation to the goal of the study; • The interpretations reflect the limitations identified and the goal of the study; and • The study report is transparent and consistent.

(7.73.3.5) Emissions at the lifecycle stage in kg CO2e per unit

32.0

(7.73.3.6) Lifecycle stage under your ownership or control

Select from:

No

(7.73.3.7) Type of data used

Select from:

Secondary

(7.73.3.8) Data quality

Good. Basic secondary data v.1.01 is preferentially used. Available secondary data (country v.1.03, foreign country v.1.01) is used if the items don't correspond to basic data v.1.01 Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process because it is difficult to collect the data for thousands of the parts. Location-based Scope 2 emissions.

(7.73.3.9) If applicable, describe the verification/assurance of the product emissions data

Permission to use the JEMAI (Japan Environmental Management Association for Industry) Carbon Footprint of Products (CFP) declaration and logo requires data verification. Upon receiving an application for CFP verification from a company wishing to make a CFP declaration, JEMAI (the program holder), selects a CFP verifier from licensed reviewers. The selected verifier conducts CFP verification for the product in the application and makes an approval/disapproval decision. Then the Review Panel confirms the result of the verification submitted by the CFP verifier, and makes a final judgment on whether to approve. CFP declarations are examined from the following basic perspectives: Conformity to relevant rules; Conformity to an applicable CFP-PCR; and Traceability of data. Product Verification ID FX-2018-001

Row 189

(7.73.3.2) Name of good/ service

AltaLink C8045

(7.73.3.3) Scope

- Scope 1 & 2

(7.73.3.4) Lifecycle stage

- Material acquisition

(7.73.3.5) Emissions at the lifecycle stage in kg CO2e per unit

840.0

(7.73.3.6) Lifecycle stage under your ownership or control

- Yes

(7.73.3.7) Type of data used

- Secondary

(7.73.3.8) Data quality

Good. Basic secondary data v.1.01 is preferentially used. Available secondary data (country v.1.03, foreign country v.1.01) is used if the items don't correspond to basic data v.1.01 Primary data is used in the raw material consumption.
